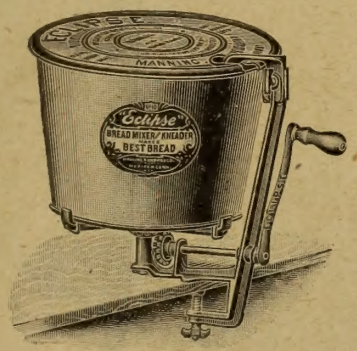
"ECLIPSE"

BREAD MIXER and KNEADER

THE ONLY MACHINE THAT KNEADS DOUGH BY COMPRESSION

MAKES BEST BREAD

SIMPLEST IN CONSTRUCTION



Sectional View

EASIEST TO CLEAN

WILL NOT GET OUT OF ORDER

THE ONLY MACHINE THAT MAKES FROM ONE TO EIGHT LOAVES OF BREAD AS DESIRED

There is big money in it for the dealer who will take hold of this line and give it a good fair showing in his store. Draw the women's attention to it and point out to them the fact that they can have **better bread** with half the work they now have, in about ¼ the time, and watch the machines sell.

The "Eclipse" is the only machine that will mix and knead as small a quantity as **one loaf**, or as many as **eight**.

It will mix and knead from one to eight loaves in **three minutes**, without putting a finger to the dough, and the bread will be more wholesome than by any other process, because the gluten in the flour is thoroughly developed by this peculiar kneading action.

It is so arranged that it can be worked in either a standing or sitting position, without the slightest exertion or inconvenience.

WRITE US FOR FURTHER PARTICULARS AND PRICES—WE CAN INTEREST YOU.

Small orders or large, we give equal attention to every customer

THE HOBBS HARDWARE CO., LIMITED

LONDON ***TORONTO***

DO YOU WANT TO MAKE A MARK IN THE HARDWARE WORLD?

If you do there are certain small lines of goods you should pay attention to.

A small sum invested in a stock of lead pencils will pay you 100% profit or more. You need a few lines of that kind to help out the no-profit goods such as nails and fence wire. Lead pencils are one of those lines. They sell readily, sell all the time and can be displayed attractively in your store. Do you stock them?

Here are a few good sellers.

F.&W.

RETURNED JUL 13 1906

No. 240—"Phonographic." The lead in this pencil will outlast that in two ordinary pencils.

RETURNED JUL 13 1906

No. 1040—"Dickens. You can sell them at 1 cent each and make a good profit.

RETURNED JUL 13 1906

No. 517—"Autograph." A good seller and very attractively boxed

RETURNED JUL 13 1906

No. 1122—"Senator." A soft and very black writing pencil. A long time favorite.

RETURNED JUL 13 1906

No. 113—"Carbon." An exceedingly black writing pencil. Writes almost like Carbon.

RETURNED JUL 13 1906

No. 171—"Venus." Indelible copying pencil., suitable for loose-leaf accounting work.

RETURNED JUL 13 1906

No. 736—Oval carpenter's polished cedar or maroon colored cedar, marked with 6-in. rule

RETURNED JUL 13 1906

No. 587—"Tortoise Shell." The best carpenter's pencil made.

SECOND INSTALMENT

Artie Dunn, the popular Bay St. tailor, is having his work-room fitted up in grand style. You will now be able to "see" Artie, for he claims the MAXIMUM LIGHT GLASS which he is installing will diffuse daylight through every nook and corner of the room.

We are glad to be able to state that the damages to Mickleborough's store by Wednesday's storm were not as heavy as at first announced. There was a great quantity of MAXIMUM LIGHT GLASS in the store, but none of it was damaged.

Among the removal notices of the week is that of Harris & Harknay. They are going to the Blair building. Their old quarters will be fixed up and we are led to understand that the MAXIMUM LIGHT GLASS people, through their local agent, have secured a big order.

The town should be proud of Jay Clark: his new residence is a credit to him. A clever piece of work was executed in the kitchen with the aim of securing perfect light. Great praise must be showered on MAXIMUM LIGHT GLASS.

Will Hold up a Shelf!

That's what a shelf bracket is for.

For this purpose there can be NOTHING BETTER, NOTHING CHEAPER than the BRADLEY STEEL BRACKET. It is well Japanned, Strong and Light. The saving in freight is a good profit aside from the lower price at which the goods are sold. Order direct or through your jobber.

ATLAS MFG. CO.,
New Haven, Conn., U.S.A

IN THE FRONT RANK

It isn't hard to explain why the Martin-Senour Paint takes first place. When it comes to a question of quality the article of real merit will always outstrip inferior competitors. That's the reason why the Martin-Senour 100% Pure Paint takes the lead—**It's Good Paint**. It backs up the makers' claims and when put to the test is right up to the scratch every time.

IT'S SO GOOD

that it makes friends wherever it goes. It builds up trade and helps the dealer keep things moving. Couldn't we interest you in a proposition of this kind? Write for our special proposition to Agents. It's a winner. Don't delay, write at once.

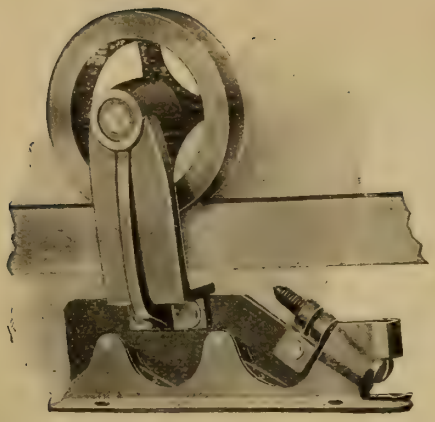
AIDS TO CONTENTMENT

How often you hear the retail merchant say he would be perfectly contented in business if it were not for the credit system! Did it ever occur to you that you can to a large degree eliminate the credit business by having a simple method of rendering accounts? The

Crain Monthly Account System

is recognized as one of the greatest agencies to this end. By the use of carbon paper the same writing makes your day-book entry and charges the items direct to the customer's bill. It is simple, accurate and time saving.

Then render your accounts monthly and you will be surprised at the results. It is the nearest approach to a cash business.



Write us for information.

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information no effort is spared, and no reasonable expense considered too great, that the results may justify its claims as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. **Correspondence Invited.**

Sales Repeat Themselves

When you have sold the

DILLON HINGE-STAY FENCE

once, you will realize the significance of the combination, "Seller's Sagacity, Buyer's Belief." You have been able to place "Dillon" merit in such light that your patrons have consented to entrust orders with you.

The "Dillon" is entitled to every sale made for it, because it possesses the qualities that rightfully produce sales. Those certain qualities of "make" and "material" belong to the "Dillon" solely. That is why there is a permanency to "Dillon" business. That is why farmers select it in preference to other wire fencing and tell their neighbors to do the same.

DILLON HINGE-STAY FENCE stands for Long Experience and Much Skill. It represents the best there is in the industry.

THE BUYING AND SELLING OF HARDWARE

By Thomas E. Oliver in The Hardware Dealers' Magazine.

If a man spends, or contracts debts for, say, $2,000 per annum, and his income is only $1,500 per annum, he must steal the difference from some source, even though it be from his acknowledged creditors, and this rule applies not to individuals alone, but to business institutions. Look sharply after such people to see that they do not steal from you, or us. Some claims are made in bad faith, for with some men a dollar counts more than their souls; but all business men are not dishonest, by any means. Therefore, if you believe the claim to be wrong, but the claimant to honestly believe he is right, then, as a matter of policy, it may pay to make a concession if there is not too much at stake; but if, on the other hand, you feel that he is knowingly taking advantage of his position, then it is wise to hold out strongly for your rights, as a matter of principle.

It is not wise to worry over increased expenses while the gross profits increase relatively. Did you ever hear of a trial balance made up of debit items only?

What is the good of an original or novel idea if you do not utilize it? Learn to clinch it before it runs away from you and becomes valueless. Give free expression to your ideas relating to our business, and we will promise to give you credit for those we regard as worthy of it, and forget the others.

There are a great many unsuccessful men, possessing at times greater originality and more natural ability than others more successful, due frequently to the fact that the one possesses more confidence, assurance—or call it egotism, if you wish—than the other. Learn to cultivate this spirit, for without it you are not likely to meet with success.

The average man of means, or one occupying an exalted position in life, is burdened with all kinds of propositions, and therefore must necessarily act conservatively; and this same rule applies to buyers of merchandise. Therefore, do not take offence if you are not received with open arms, and, while your proposition is an honorable one, and of mutual benefit, you must persistently, but politely and tactfully, impress it upon the party of the second part.

When you know at heart you are wrong, it is wise to make such an acknowledgment, which will prove more creditable to your good judgment and manhood than stubbornly sticking to your first point on a false notion of principle.

Every man will perform bad as well as good deeds, and the fair thing to do is take his balance in the average. Don't narrow your view down to his mistakes only. Every successful business house has a profit and loss account.

Natural modesty and common sense might suggest the principle of not overestimating your own or of under-estimating the other fellow's ability, and the best results will follow; for some apparently sleepy men are in reality very keen, and at times sacrifice their pride in this respect to accomplish their object.

A reasonable course to pursue is to abide by an agreement strictly until you receive positive proof that the other fellow has broken faith, and then to act quickly in protecting your interest without any formal notification. To our minds, a breach of good faith in itself nullifies an agreement.

Scarcely any necessity to worry over the orders for a heavy damage aromeEo the orders for a heavy tonnage of material, representing a large moneyed value, which the average manufacturer needs badly to meet current obligations. He will, as a rule, see that shipments of such orders are made at the earliest possible moment, but we cannot too strongly emphasize the necessity of following up closely the small orders which some short-sighted manufacturers may neglect, because of apparently representing to him a small money value, but which may be holding up the completion of a contract job or a large order representing considerable in value to someone. Give proper treatment to the man ordering a dollar's worth of goods, and he may directly or indirectly bring you orders for many thousands.

The good will of an established business can be appreciated only by thoughtful and experienced men. While the population of the world is increasing, the area seems to be lessening, and the friends you make in the remotest parts of the earth may help your interests through friends and relatives at far distant points.

A junior officer of a large corporation made the following remark, worth quoting: "The president of our company is an able man of strict integrity, but should he make mistakes we must shield him from the penalty; for if our patrons lack confidence in the man directing the policy of the business it would react seriously against our interests." He knew the value of good will in business.

What is the test of a buyer's ability? To my mind, the amount of the net yearly profits of the company he represents, for market conditions largely regulate the selling prices; and, while general economy in the running expenses of each concern counts for considerable, the advantages obtained by the buyer are of more than a little importance. "Goods properly bought are half sold."

The buyer so gloated with egotism that he cannot resist talking freely of his accomplishments is a detriment to the house he represents, as well as the seller, although he may not realize it. You must be careful not to give such people too much of your confidence. The shrewdest buyers are the most conservative and least talkative, and while they may worry you and keep you guessing and make you do the talking, they are not likely to make trouble for you by betraying your confidence. A certain manufacturer's statement is worth quoting, as follows: "Do not quote these special prices to Brown, for he has talked too freely to me of other manufacturers' prices, and I am afraid it is a habit with him; but with such a man as Smith it is safe, and will go no further."

The average sales agent is made to discriminate, not alone because of the standing of the house or the quantities to be purchased, but also between the individual buyers.

Individual buyers of distinctly different types obtain substantial results in a different manner. I know of one buyer of fine principles that does practically all of the talking, and fairly begs the manufacturer for what he wants. I had occasion to criticize him, when his employer sensibly remarked: "I know him to be honest and faithful to his duties, and the results are unquestionably profitable to us."

I also know of another type of buyer, as quiet and modest as a trained nurse, and as mum as an oyster, making the sales agent do all the talking and worrying; and results prove him to be one of the keenest and shrewdest of buyers and and a natural born actor; and if either of these buyers attempted to imitate the example of the other they would both be failures.

Every intelligent buyer aims to work in close and harmonious relations with the sales department. Let each show proper regard for the other department, and the combination will add materially to the sales and profits.

Any buyer—in fact, any successful man—taking undue advantage of his position is a snob.

If any man tries to bribe a buyer for his own personal benefit, he would be justified in knocking him down; but it would be more polite to tell him squarely that all rebates on orders or shipments belong to his employers.

A TOWN INDUSTRIAL

The Rise of a Manufacturing Centre in the Face of Adverse Conditions.

In spite of the fact that the Town of Oshawa seems endowed with all the natural disadvantages with which Providence ever graced a community it has risen from an obscure hamlet to a manufacturing centre whose industries are known as household words throughout the Dominion. Without water-power, without natural gas, without cheap fuel, without natural transportation facilities—in fact, sans anything that goes to make for the building of an industrial community— this wonderful town has developed and prospered. As such it continues a reproach to better favored but less enterprising centres. The question at once arises "How was this accomplished?" It seems like a riddle of the Sphinx. The answer is found in the lives of a few remarkable men, some of whom are to-day living monuments to the possibilities of individual effort. Oshawa is further favored by having as a citizen a genius like Dr. Kaiser, whose courtesy in supplying much of the information herein must be acknowledged.

To go into history, it is apparent that from the start the town's very existence is due to men of powerful personality. These men have made a town distinguished for successful manufacturing industries. The first man to concern himself with the place in an industrial way was J. B. Warren. This was early last century. A fair water-power was at that time available and here he built a mill.

This water-power was the town's first and only attraction. The first manufacturer was A. S. Whiting, who was followed by a leader in the person of Joseph Hall, who was followed by F. W. Glen, his son-in-law, and T. J. Hall. As these men went down two men arose from the ruins, these being Hon. T. H. Gibbs, formerly secretary of state, and his brother, W. H. Gibbs. Throughout their lifetime these two were the mainstay of the struggling hamlet of Oshawa. During a period of depression in manufacturing they became financially involved and were unable to tide over the depression. When they were prosperous they did much for the town and any progress made twenty-five or thirty years ago was due to them.

As the Gibbs brothers were shifting from the arena of activity there sprang up two most remarkable men the Town of Oshawa has yet seen, men who have accomplished for Oshawa what others were unable to do. These are John and W. F. Cowan, who are known throughout Canada in industrial and financial circles. To their business ability, enterprise and brain power the present prosperity of Oshawa is due without any doubt. These men established some of the greatest of Oshawa's industries, but in starting the Western Bank, which constitutes the hub around which the whole wheel of Oshawa spins, they rendered the greatest service.

The Western Bank was started in 1882 as a local financial centre, but has since established branches in many of the neighboring counties. The president is John Cowan and the board of directors includes W. F. Cowan. The managing director is P. H. McMillan, and to his close application to business much of the success of the bank is due.

It may be surprising to think that the influence of a bank should have been the means of creating industries from the fact of its rare occurrence. Being the head office and in close touch with all her people, the management of this financial institution were in a position to aid and build up when a branch manager under the present laws of banking would

Chelsea Falls, on the Gatineau River.

be powerless to assist. It is a broad statement, but true, that with one exception the important manufacturing interests of Oshawa to-day owe their present status to the helping and guiding hand of the Western Bank. In earlier days a branch office of another bank was started there but did nothing to build up the town industrially and later closed its doors.

The principle on which the town has been built up lies in the fact that since the bank was started no man of character and ability desirous of manufacturing in Oshawa has been refused assistance by the bank. In spite of this principle, few bad debts have been made. In one case a firm was in bankruptcy when the town bank took hold and it is now one of the largest organizations of its kind. Mr. McMillan stated that the bank never hampered an account and so did not upset the calculations of worthy manufacturers.

Some Industries.

Whilst it was mentioned at the outset that Oshawa was without natural transportation facilities, it was meant that the town had neither water connection nor situation on the main line of a railway, yet manufacturers are specially favored with an electric line running to Oshawa Junction and which has a switch running to every plant.

Some of the foremost industries in the town include the McLaughlin Carriage Co., the Pedlar People, manufacturers of roofing and sheet metal goods; the R. S. Williams Piano Co., the Schofield Woollen Mills, the Ontario Malleable Iron Co., and the Oshawa Steam & Gas Fitting Co. In addition to these there are the canning factory and several other metal industries. The Ontario Malleable Iron Co., which is now employing between four and five hundred men, is making arrangements to double its capacity and will in the course of a year employ twice as many men. The same is true of the Oshawa Steam & Gas Fitting Co., who now employ about three hundred hands.

Many a town in the country with infinitely better facilities for manufacturing, has been at a standstill when Oshawa has gone ahead. Every town has men of latent resource who, if they have the courage and energy, could live to have the satisfaction of having seen their native or adopted town become an important industrial centre through their efforts. May the example set by the princes of industry in Oshawa be followed in other centres.

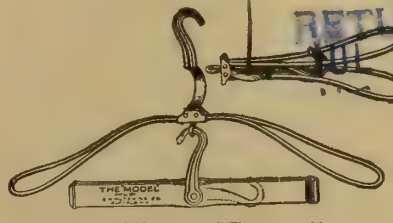
There are a lot of people who would rather gather to-morrow's thistles than to-day's figs.

NOVELTIES FOR THE HARDWAREMEN

Readers desiring the addresses of the manufacturers or jobbers of the articles described, or any additional information, can secure the same from the Editor of HARDWARE & METAL.

MRS. HUTCHINS' STRAINER SPOON.

The strainer spoon shown herewith is designed for skimming off the scum which continually arises on jellies, preserves and soups when cooking. It is also used for poaching eggs and whipping cream. It has all the uses of strainer or skimmer and the convenience of a spoon. A screen wire is set into the bowl of the spoon to serve these purposes. The spoon is 12 inches long, with metal parts retinned, and is shown in a display rack holding one dozen spoons. Another popular article made by the same company is the combined coat and trouser hanger, with the perfection shoulder shape. The manufacturers are the C. K. Hutchins Co., Buffalo, N.Y., represented in Canada by Mr. Drysdale, 704 Mance street, Montreal.

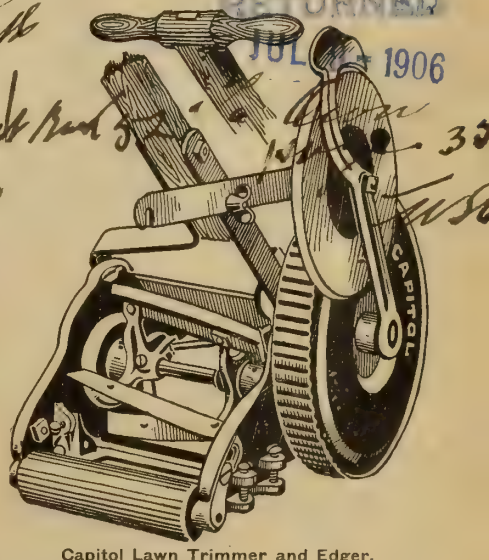


Display Rack of Strainer Spoons.

RETURNED JUL 9 - 1906

QUALITY COUNTS.

Low price often tempts people to purchase something that is not perfectly satisfactory, and they console themselves for the imperfections by the thought that they have at least got their money's worth. But the man who buys a low-priced revolver is indeed tempting providence, because it stands to reason that the money which the manufacturer saves must come out of the quality of the weapon. You cannot have absolute safety, accuracy and the very best materials and workmanship at a bargain counter price, and unless the weapon is as nearly perfect as human skill can make it, it may prove more destructive to the owner than to anyone else. A revolver that can be depended on in any emergency, because it is made of the best material and is constructed by skilled mechanics, is the "H. & R." double action, model 1905, revolver.



Combined Coat and Trouser Hanger.

RETURNED JUL 9 - 1906

CAPITOL LAWN TRIMMER AND EDGER.

The Secrest Mfg. Co., Cleveland, Ohio, is putting on the market the Capitol lawn trimmer and edger, here illustrated, for which Joseph Breck & Son, Toronto, are Canadian selling agents.

This implement is made particularly for trimming and edging a lawn or any such green sward rapidly. It has four crucible steel blades 6 inches long, which are hardened and tempered in oil, brass bushings and double adjustment. The principal feature is the trimmer, which is said to obviate the use of shears and similar devices for trimming otherwise inaccessible sections, while the shield over the cylinder protects the flowers, thus increasing its value on fine lawns and around flower beds and shrubbery, especially in the case of cemeteries and parks, where its close cutting qualities enable one to cut close to the side of any obstruction. The cutting disc for edging the lawn is of high-grade crucible steel, 6½ inches in diameter, and the whole machine is well made and painted in white and gold.

Capitol Lawn Trimmer and Edger.

RETURNED JUL 9 - 1906

TOO INQUISITIVE.

"Willie," said his mother, "I wish you would run across the street and see how old Mrs. Brown is this morning."

A few minutes later Willie returned and reported:

"Mrs. Brown says it's none of your business how old she is."

RETAIL HARDWARE ASSOCIATION NEWS

Official news of the Ontario and Western Canada Associations will be published in this department. All correspondence regarding association matters should be sent to the secretaries. If for publication send to the Editor of Hardware and Metal, Toronto.

Officers Retail Hardware and Stove Dealers' Association of Western Canada:

President—A. J. Falconer, Deloraine.
First Vice-President—J. B Curran, Brandon.
Second Vice-President—W. M Gordon, Winnipeg.
Secretary-Treasurer—J. E. McRobie, Winnipeg.

Executive—Alberta, A. E Clements, Olds; C. F. Comey, Calgary; A. R. Auger, Okotoks.

Manitoba—H. S. Price, Boissevain; A. P. Macdonald, Winnipeg; O. Gilmer, Winnipeg.

Saskatchewan—G. K. Smith, Moose Jaw; S. A. Clark, Saskatoon; J. R. Fox, Weyburn.

Officers Western Board (elected by general merchants and hardwaremen in joint session): President, W. G. McLaren, Souris, Man.; vice-president, G. K. Smith, Moose Jaw, Sask.; H. C. Hamelin, Winnipeg, Man.; secretary, W. A. Coulson, Winnipeg, Man.; treasurer, J. E. McRobie, Winnipeg, Man.; auditor, J. A. Lindsay, Winnipeg, Man.

Association offices, 53 Scott building, Main street, Winnipeg.

Officers Ontario Retail Hardware and Stove Dealers' Association:

President—A. W. Humphries, Parkhill.
1st Vice-President—W. G Scott, Mount Forest
2nd Vice-President—J. R. Hambly, Barrie.
Treasurer—John Caslor, Toronto.
Secretary—Weston Wrigley, 10 Front St. East, Toronto.

Executive Committee—The officers and J. W. Peart, St. Mary's; M. R. Marshall, Dunnville; D. Brocklebank, Arthur; F. W. Jeffery, Midland; E. P. Paulin, Goderich, and Frank Taylor, Carleton Place.

Auditors—J. W. Peacock and C. F. Moorhouse, Toronto.

COMING EVENTS.

Convention of Retail Hardware and Stove Dealers' Association of Western Canada, in Winnipeg, July 25.

Convention of Retail Merchants of Western Canada in Winnipeg, July 26 and 27.

Convention of Ontario Retail Hardware and Stove Dealers' Association, in Toronto, on September 4 and 5.

WESTERN HARDWARE ASSOCIATION CONVENTION.

On July 25 the regular annual meeting of the Retail Hardware and Stove Dealers' Association will be held in Winnipeg in the board room adjoining the association offices. Notices will be sent to association members during the next few days, but it should be distinctly understood that every bona fide hardware dealer in the west will be made welcome at the convention. No hardwareman should stay away because his name may have been inadvertently overlooked in sending out the notices. As the convention is being held during the week of the Winnipeg exhibition, merchants coming to the meeting will have the advantage of excursion fares. This meeting is the proper place to register all kicks and protests, it is the proper place to discuss all trade grievances, and it is accordingly very desirable that there should be a large attendance of western hardwaremen.

EASTERN ONTARIO ORGANIZING.

The secretary of the association visited several towns and cities east of Toronto last week and as a result two important towns are in line, every important dealer being now a member of the association. Other members have also been enrolled along the line and the prospects for future work are excellent. In one of the places organized the merchants were already working together satisfactorily and price-cutting was felt only from general merchants in the nearby country stores. In the other town price-cutting was prevalent and stores were being kept open in the evenings. The dealers were gotten together, however, and if they follow the matter up as they should both price-cutting and late hours should be done away with in the future.

Two of the towns visited were Port Hope and Bowmanville, each place having five hardware stores to a population of 5,000 and 3,500 respectively. Needless to say prices on staple lines are unsettled, an illustration of this being a sale of white lead a week ago at $5.90, the quotation having been forced down from $6.25 by stories that competing dealers were selling for less than those offered to customers. Where competition is so keen it is hard to effect an organization, but it is a choice between organization or heavy financial loss and possible bankruptcy.

In many places the merchants reported that they had paid fees into the Retail Merchants' Association without receiving any benefit and they did not feel like making similar contributions in the future. Grocers and druggists, they admitted, might have secured some advantages from the organization referred to, but the hardware trade had gained nothing. The remarkable success of the hardware associations in the United States and in Western Canada and the fact that the western dealers are willing to pay $10 per year as a membership fee shows, however, that results can be secured by a purely hardware association.

INTERESTING ARTICLE PROMISED.

One of the members of the executive committee has done some practical work in preparing a plan by which the association can be of great advantage to its members in the matter of collection of bad debts, etc. If possible the article will be published next week.

SELLING TO CONSUMERS.

"The most troublesome evil in the trade here," writes a Niagara peninsula dealer to the secretary of the association, "is that Toronto houses on the jobbers' list sell certain lines to consumers here at prices I cannot compete with, the consumers buying at the same prices or even lower than I can buy at."

This evil is widespread and is worthy of considerable attention on the part of the association. From all parts of Western Ontario similar reports have been received and dealers in Eastern Ontario towns state that the same competition is felt by them.

Dealers cannot organize to arrange price agreements but by getting together a strong association a remedy can probably be arrived at which will be satisfactory to both jobbers and retailers.

TORONTO DEALERS TO MEET.

On the request of several prominent Toronto hardware merchants a meeting has been called by the local officers of the association to be held on Tuesday evening, July 17, at 8 o'clock, in the Temperance Hall, Bathurst street, just below Queen. The sale of goods to consumers by jobbing houses will be discussed, and all hardware dealers (both members and non-members of the association) are invited to attend and take part in the discussion.

CUT PRICES ON TINSMITHING.

"One who has been in the battle since 1869" writes:

"The present association is one of the best organizations for the trade that has ever been, and gives me much pleasure and relief to be connected with same. Retailers and tinsmiths can now come together and arrange to have a fair profit on their goods, eavestroughing, jobbing, etc., through the country. The old system of giving away nails to sell eavestroughing, and eavestroughing to sell nails, should be a thing of the past. I was in the country yesterday, prospecting for jobbing, and called on a man who had two barns to eavestrough. He asked my price per foot, and knowing my opposition, I quoted lower than I had usually been doing at 7c. per foot for 10-foot galvanized trough, and ten miles to go to do same. He at once informed me I was too high in price as he could get it done for 6c., which I knew he could. Now, if some association members would set a fair price for such articles or devise some means where mechanics could have the same privileges as the farmers enjoy one with another, live and let live, this association would be a grand and glorious thing. Our sons grow up in the trade, learn the business at home, get dissatisfied with cut prices and hard work, leave, go to the cities and work for wages. We cannot hire men for $2 per day to take their place, still the wholesaler and manufacturer expect cash or prompt settlemen. To put it plainer, there are only a few of those price cutters throughout Ontario, and the manufacturers can stop the evil if they will. Furnace work and heating are the same, chopped price in some sections, and should be stopped.

JOIN THE ASSOCIATION.

Hardware or stove dealers who have not yet affiliated with the Western Canada or Ontario Associations, should forward their applications to the two secretaries at once. Every member in the associations gives added power to the officers in their efforts to remedy trade evils.

CONSULS KEEN ON TRADE

British Representatives in the United States Anxious to Assist Canadian Merchants—Enterprising Move by Supt. O'Hara, of Canadian Commercial Agencies.

A very interesting departure, and one that should show large beneficial results for Canadian mercantile interests, was recently made by the Commercial Agencies Branch of the Trade and Commerce Department, Ottawa.

Among the manufacturers and exporters of the Dominion, Supt. F. C. T. O'Hara explains in last week's issue of the Weekly Report, the impression prevails that the commercial agency service should be extended. There is a general impression, too, that British consuls do not interest themselves in Canadian trade. Canada has not a commercial representative in the United States. These facts and a request from British Consul-General Alex. Finn, at Chicago, that his office be considered a commercial agency for the Dominion, suggested to Supt. O'Hara that he issue a circular letter and he did to each of 42 British consuls and vice-consuls throughout the Union, embodying these three questions:

Questions Asked.

(a) What suggestions can you offer seeking to bring about more intimate commercial relations with Canadian business men?

(b) Have you had much correspondence with Canadian firms? If so, has it resulted satisfactorily or otherwise?

(c) Do you think you can assist Canadians to extend their market in this district?

"The result," says the superintendent, "has been a splendid testimony to the efficiency of the British consular service in the United States, many of whom replied at considerable length, offering excellent suggestions, and in general terms stating that the facilities of their respective offices were at the service of Canadian business men."

Some excerpts from replies are published. Here are a few of the more suggestive:

At the Service of All.

Consul-General Finn, Chicago: "* * * I have always considered myself as representing the whole Empire and at the service of any and every British subject from wheresoever he might come. I think that all parts of the British Empire and all departments of the Government and its different parts should treat the British consul as their representative. * * * All merchants should be encouraged to write to me on all occasions.

"I should like all portions of the Empire to supply the consulates with the fullest information as to the resources, manufactures, openings for capital, etc., so as to make them a place where information can be obtained immediately. Most of the correspondence we have had with Canadians on business has been with persons seeking agencies in Canada for American goods."

For Boston's 150,000.

Wm. Wyndham, consul, Boston: "I have never had, during my consular experience of nine years, any inquiries from a Canadian merchant, and on the other hand, from the other colonies, from Australia and India, such inquiries are often received and are as promptly attended to as similar inquiries from Great Britain.

"Such assistance as is in my power I will gladly give to any Canadian firm seeking markets for their goods in my consular district. I shall be pleased to receive from your office any official publication you may desire to send me, which will be filed here for the use of Canadians in this district. I believe there are resident in Boston and its vicinity about 150,000 Canadians."

No Greater Pleasure.

Horace D. Nugent, consul, Galveston, Texas: "His Majesty's consular officers are the public servants not alone of Great Britain, but of the Empire at large, and further, it should be not only our duty but also our privilege and pleasure to do our part in aiding to build up and enlarge the trade and commerce of the Empire by holding ourselves ready at all times to assist in any way possible the commercial interests of our fellow Britons, whether in the United Kingdom or the colonies. Personally speaking, I have always taken this view, and nothing would give me greater pleasure and pride than to feel that I had in my small way helped to extend the trade of the Dominion."

He suggests publicity of the fact that the British consular officers are ready to answer Canadian trade inquiries. He promises to ascertain more specifically in what articles of Canadian origin business might be done.

Correspond Direct.

Sir Percy Sanderson, K.C.M.G., consul-general, New York, saw no reason why Canadians should not avail themselves of the services of British consular offices. His answers to the superintendent's three questions were:

(a) Canadian merchants should correspond direct, stating their requirements.

(b) Very little.

(c) Assistance could be given to Canadians to extend their market in this country if they would state their requirements.

Glad of Information.

Consul James Laidlaw, Portland, Ore., replied in part as follows: "It is not the province of a British consul to encourage the trade of Americans to the detriment of British trade, but by British trade I mean the trade of the British Empire, and not solely that of the United Kingdom. I have never looked upon myself as merely the representative of a section of the Empire.

"I can only suggest that if Canadian business men would make their desires known we would assist in every way practicable. A consul cannot make business or work up business, but he can make suggestions and answer inquiries which might lead to this, and I am sure not only would be glad to do so, but it is also his duty.

"I have had exceedingly little correspondence with Canadian firms. I regret that none of the departments of the Canadian Government have ever thought of sending their reports to this office unless specially inquired for. Not even changes in tariff are notified, and I certainly value very highly your offer to send all official publications issued by your department."

Will Send Information.

Consul Fraser, Baltimore: "Should any opportunity offer in this district of which Canadian merchants might avail themselves, I will gladly furnish full particulars of it to you for publication in your weekly report."

Consul C. W. Bennett, San Francisco: "As regards the special interests of Canada in this consular district, it is no doubt within your knowledge that a large trade between British Columbia and San Francisco already exists. It is presumably in the hands of business men to see the opportunity offered and seize it. Any assistance asked for I will be most happy to give whenever possible."

Give Details.

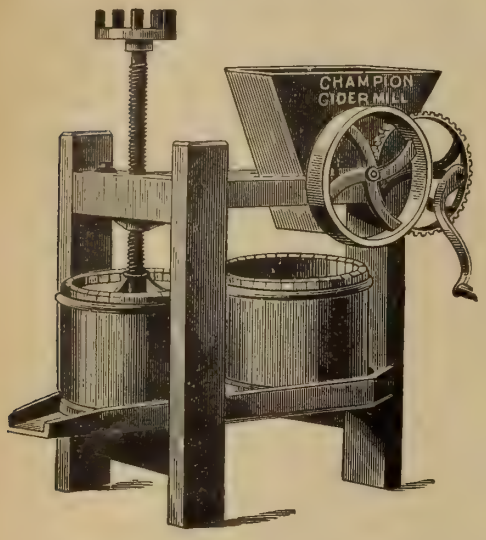
Consul Wilfrid Powell, Philadelphia: "Firms in Canada should address their requirements to the consul, taking care that the inquiry is made in fullest detail in order that the consul may be able to obtain if possible equally full information. We have had a considerable amount of correspondence on commercial matters with Canadian firms and business men, in some cases evidently with satisfactory results, judging from the letters received."

Consul Carew-Hunt, New Orleans: "I am always ready to do anything in my power to assist Canadian commercial interests in my district. I would suggest that a list of the British consular officers in the United States should be sent to the various boards of trade and chambers of commerce throughout the Dominion, with the information that the services of such officers are at the disposal of Canadian merchants to promote Canadian trade interests. Similar lists might with advantage be sent to other institutions. I have had little if any correspondence with Canadian firms."

Get Canadian Goods.

Acting Consul Harkness, at Savannah, Ga., suggests the usual method of communicating with commercial agencies, and continues: "At the present time there is some export trade, annually, from the ports of this district to Nova Scotia and New Brunswick, mostly in the way of shipments of yellow pine lumber, rosin, turpentine, etc., but comparatively little business is done in direct Canadian imports, as such goods of Canadian origin as are consumed here come, as a general rule, by way of New York and Boston. It appears to me quite possible that a reasonable improvement in the present trade conditions might be hoped for in the near future if a proper effort is made in the right direction."

STERN REBUKE.



Barber (to customer)—Razor all right, sir?

Customer—My dear man, if you hadn't mentioned it I'd never have known there was a razor on my face.

Barber—Thank you!

Customer (continuing)—I thought you were using a file!

ARE YOU INTERESTED

in your customers' "stove welfare?

Strictly speaking, you should be interested in their welfare.

That means when you sell them a range you will know **why** you recommend it.

That means when you make recommendations you will not **altogether** be influenced by your own profits.

That means your customers will come back to you for their other needs.

The dealer who wants to conduct business in this way will find

THE EMPIRE QUEEN RANGE

worthy of his recommendations, suited for his customers and a money-maker for himself.

If you send your name and address, you'll get a copy of our booklet.

EARLY CLOSING.

The hot weather is upon us, and the time for early closing. In many towns there is no arrangement between storekeepers as to what hour shall be observed as the closing hour, each man keeping open as long as he likes, and often longer than he likes, because the other fellows do it. It is a pity that such is the case, but it need not be if an arrangement is made and observed.

Nine times out of ten the other fellow is quite willing to close at a reasonable time, say half-past six, or seven, if he is approached on the subject. Of course there might be one or two who will keep open until all hours of the night to catch the stray shillings, but the after hours trade is desultory, and it is questionable if the business done in this way ever hurt the man who closed up at a reasonable hour.

There is no time better than the present to start an early closing propaganda, which could well be continued after the Summer has gone. Life is short, and time is fleeting, and an hour or two of healthy recreation in God's out-of-doors gives one a zest to return to his work next day, and a vigor to carry him through the Winter months when he is prone to remain indoors. It is safe to say that, looking back at the end of the year, no loss to business will be seen from closing at a reasonable hour, and those who were in the habit of night purchasing will be educated up to buying during the day.

AN AGGRESSIVE ASSOCIATION.

A most interesting mercantile organization is the Merchants' Association of New York, the president of which is Clarence Whitman, and the first and second vice-presidents Gustav H. Schwab and Henry T. Towne, the latter being president of the Yale & Towne Manufacturing Co., New York.

The objects of the association are of a varied character, as is shown by Bulletin No. 21, issued on June 25, giving a summary of recent work done by the executive committee whose names are given above. Matters before Congress, the State Legislature and the New York local government are considered by the association and where necessary expert engineers, etc., are employed to investigate problems before recommendations are made to the lawmakers. The questions dealt with in Bulletin No. 21 comprise (1) waste and leakage of water and its prevention, (2) amendments to Customs Administrative Act, (3) registration of trade marks in Cuba, (4) regulation of consular fees, (5) regulation of express and sleeping car companies by Interstate Commerce Act, (6) relief of San Francisco, $185,358 being sent, (7) preservation of Niagara Falls, (8) ship subsidy, (9) laws delay and condemnation proceedings, (10) compulsory metric system bill, (11) fire insurance, (12) pocket guide to New York for distribution to visiting merchants, (13) illegal structures on docks, (14) elevated loop to connect bridges, (15) local taxation of consigned goods, (16) postal notes of small denominations, (17) street signs, (18) list of legislation supported and opposed, (19) consular reform, (20) New York bay pollution, (21) reduced railway fares to encourage buyers to visit New York, (22) change in rates on public vehicles.

The wide scope of the association's work is well illustrated by the varied character of the subjects enumerated and the value to the community of such a public-spirited body is incalculable. The boards of trade in Canadian towns and cities do good work within their own spheres of influence, but they might well emulate the New York association in its enterprise and breadth of action.

MANUFACTURERS GETTING TOGETHER.

What should lead to one of the greatest industrial organizations in the world was commenced by the combined Boards of Trade of Niagara Falls, Ont., and Niagara Falls, N.Y., when they recently invited representatives of the manufacturing interests from Canada and the United States to meet and visit the various works on both sides. It is proposed to make this an annual affair, but in which the manufacturers as a whole will be in closer connection. With an annual meeting of this kind where the manufacturers of the two great countries are brought in close contact, questions of mutual and reciprocal interests should be discussed. Matters of tariff and questions concerning methods and materials of manufacture could be brought up and agreements arrived at as to most advantageous methods for the industries of both countries. With the manufacturers of the two countries in unison on certain points the respective Governments could hardly fail to listen favorably to petitions from them, provided they were in harmony with the interests of the masses. Now that the matter has been fairly launched it should not be allowed to drop, and those who took the initial steps should see to it that a great organization is effected having for its object the discussion of broad industrial problems, conducted after the same manner as the great engineering societies.

BRITISH CONSULATES IN U. S.

The Department of Trade and Commerce in its Weekly Report dated June 18 gives the result of a circular letter addressed to the British consulates in the United States regarding the possibility of services being rendered by these consuls to Canadian manufacturers who desire to do business in their districts. The report of the superintendent of commerical agencies on this matter is in part as follows:

"In view of the somewhat general impression, especially among the manufacturers and exporters of Canada, that the commercial agency service should be greatly extended, Canada not having a single commercial agent in the United States, the superintendent of commercial agencies recently addressed a circular letter to all British consuls-general and consuls in that republic seeking if possible to bring about some measure of harmony between these officials and the Canadian business community, and thereby if possible unofficially enroll their services more directly in the interests of Canadian trade. As is well known, the impression has existed for many years among Canadians that British consuls do not interest themselves in Canadian trade, and, therefore, could be of little or no use to them. On the other hand the statement was made to the superintendent of commercial agencies that Canadians as a rule seldom availed themselves of the advantages offered by British consuls in the United States by calling upon them, or by writing to them, and that Canadians had no ground to hold such an opinion when they seldom or ever sought their assistance. The result has been a splendid testimony

to the efficiency of the British consular service in the United States, many of whom replied at considerable length, offering excellent suggestions, and in general terms stating that the facilities of their respective offices were at the service of Canadian business men.

PROMOTING TIN PLATE CO.

We understand that Mr. Meldrum, who has been associated with J. Wesley Allison, of Morrisburg, in promoting the Canada Tin Plate & Sheet Steel Co., is now in the Old Country, presumably for the purpose of selling the company's stock to English capitalists.

Word has come to us that Mr. Meldrum recently visited one of the large Welsh plate mills, stating that he desired to purchase large quantities of tin and black sheets. If this was the real purpose of his visit to England, it would seem to bear out the opinion expressed some time ago, that the Canada Tin Plate & Sheet Steel Co. did not intend to roll the sheets in this country, but would import the sheets and tin and merely tin the sheets in their Morrisburg plant.

On the other hand, it is possible that an effort is being made to interest some of the Old Country manufacturers in the enterprise, so as to persuade them to take up a portion of the unalloted stock (and there seem to be large blocks of this latter still available). Be this as it may, it is certain that rumors have been industriously circulated to the effect that the best known English mills had made an offer to absorb the Canadian plant. This rumor had, of course, no foundation.

The public seem to be by no means anxious to take up this stock. When the project was first launched a boom in industrial stocks of all kinds existed, and a certain amount of capital seems to have been invested on the start. But, now that the prospects of the company have been exploited, great difficulty is being experienced in disposing of the shares. A lean year has come for the wild cat promoters.

GIVING CREDIT.

The trend of the times is towards a cash system of doing business, not only between the wholesaler and the retailer, but between the retailer and his customer. Between the latter, however, there is not the definite state of trade existing that there is between the former, although there appears to be no logical reason why such a condition of affairs should not sooner or later be evolved.

A cash basis of selling is the ideal of the retail merchant, but it is not always workable, and particularly is this the case where local competitors make a practice of giving credit. But if a man finds it impracticable to sell for cash there is no reason why he cannot establish a credit system for those who are good customers and must have time, by having stated periods, either weekly or monthly, when accounts must be settled, after which date interest would be charged the same as by a bank. It is unreasonable that a merchant should pay interest to a banker on money to buy merchandise that he sells without either interest or security. The only reason that can be given is that custom has established such methods, and its dictum is considered final, but the man who breaks away from these usages and strikes out on the stipulated time payment plan will find that his anxieties and losses caused by long-time accounts will be almost eliminated.

There might be at first some trouble arise from adopting such a credit system, and even the loss of a customer or two, but as it is the slow-pay man whom the time payment plan is designed to reach, is it not just as well to lose his trade at the outset as to eventually lose it through necessary dunning? If he pays his bills regularly the weekly or monthly plan will be no hardship upon him, but if he is one of the slow pays the sooner he gets into line or drops out the better.

There seemingly must be some credit system, and the man who gives credit must do so under some hard and fast rule, otherwise the constant leaks will largely offset the profit he makes.

THE SITUATION IN METALS.

A temporary drop in antimony is the feature of the week's transactions in metals. Some few days ago a slight decline was felt on foreign markets, and Canadian dealers responded by shading the current price to 30c. on large orders. As this weakness has continued longer than was expected, a quotation of 28c. has now been declared. From the very nature of the case, however, it cannot be possible that the present condition is a lasting one, but is probably the result of some forced depression manipulated on the metal exchange. An early recovery is looked for by keen market followers.

Ingot tin continues to go up and down at the pleasure of the large operators. Conditions early in the week seemed to indicate that there would be another upward movement, for small advances were made for two or three consecutive days. What was gained in this way was soon lost, however, and the price given in our market report will be seen to be lower than last week's. Dealers continually refuse to quote definite prices on tin while the market remains in such a ticklish state, and our figures may again be considered as simply nominal.

A great deal of surprise is felt at the steady decline of pig lead in the face of a particularly strong demand. For some weeks past we have shown a slight drop in each report, and the depression in lead seems to be general. At the moment of going to press, word comes that another decline has transpired on the London Exchange, but the difference is so trifling that the price quoted is not affected, except in tone.

Considerable difficulty is experienced in getting deliveries of copper. A large Montreal house who forwarded specifications this week were notified by return mail that one producer could not ship any copper until the middle of August, while another firm could, at the earliest, guarantee deliveries by the end of July. Still prices are not advanced, and the conviction is growing that producers have some ulterior object in view in discouraging the advance which market conditions fully warrant.

Interest in sheet metals continues strong. Nearly all sheets are very firm, and all American mills are very busy. Some of the English manufacturers are handicapped by the agreement entered into, not long ago, by the leading manufacturers of galvanized sheets in England and the United States. On the whole, however, even these firms cannot complain.

A MERCHANT'S POINT OF VIEW.

A prominent Chicago merchant said in a newspaper interview:

"Among the many methods that the merchant has to use for advertising the most direct, best, and attractive means is the show window. For this reason the art of window dressing has advanced to a marked degree in so far that the window dresser has to use all available auxiliaries for producing the best effects in his window and the more individual and unique his display the greater the impression on the outside public.

"The success of a tastily arranged window is best manifested by the interest which it produces in the passer-by. One person looking and staying before a window will invariably draw others, and soon we can see ring after ring of curious onlookers watching the ensemble and details, admiring the peculiar ideas of the window dresser, speaking about some original, charming and novel effect, and going away to talk to others about it, thus unconsciously advertising the merchant and bringing him new customers. Thus is seen the importance of having modern ideas in dressing a window."

MARKETS AND MARKET NOTES

(For detailed prices see Current Market Quotations, page 62.)

THE WEEK'S MARKETS IN BRIEF.

MONTREAL.

Antimony—Now quoted at 28 cents.
Solder—Declined ½ cent.
Ingot Tin—Quoted tentatively at 44c to 44½c.
Pig Lead—Has declined another 5c per 100 lbs.
Old Copper Wire—Easier, at 15¼c.
Light Copper—Now quoted at 14¼c.
Old Rubbers—Somewhat firmer, 7½c.

TORONTO.

Lead Pipe—Advanced to 15 per cent. discount.
Solder—Slightly weaker in price.
Linseed Oil—Quoted two cents lower.
Turpentine—Price has dropped 2 cents.
Shot—Now quoted at net list—was five off.
Tinned Rivets—Now net extra 4c per pound.
Stanley Goods—Advanced 10 to 20 per cent.
Antimony—Price declined one cent.
Old Material—Scrap zinc and old rubbers are held higher. Copper and brass are dull.

Quebec Hardware Markets.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, July 6, 1906.

It would be unnatural if the hot weather which has been the rule for a couple of weeks past should produce no effect on business, and so the Montreal jobbers express no surprise at the fact that orders are now falling off slightly. On the contrary, the liveliest satisfaction is felt, because the mid-summer slackness this year promises to be even less noticeable than it was in 1905.

The market generally is very steady, and there has been nothing doing in the way of price changes this week. Unless unexpected fluctuations occur in the primary markets, all hardware staples should remain stationary in price for some time yet.

AXES—Business is moving in the customary volume for this season We are still quoting as follows: $7.60 to $9.50 per dozen; double bitt axes, $9.50 to $12 a dozen; handled axes, $7.50 to $9.50; Canadian pattern axes, $7.50 a dozen.

HANDLES—Prices are unchanged. Our quotations are as follows: No. 3, $1.25; No. 2, $1.50; No. 1, $1.90 a doz.; adze handles, 34-inch, $2.20 a dozen; pick handles, No. 2, $1.70; No. 3, $1.50 a dozen.

LANTERNS—Orders coming in denote a fair demand. We still quote $4.25 for cold blast.

RIVETS AND BURRS—The same conditions prevail as were noted last week. Discounts: Best iron, rivets, section, carriage, and wagon box, black rivets, tinned do., copper rivets and tin swede rivets, 60, 10 and 10 per cent.; swede iron burrs are quoted at 60 and 10 and 10 per cent. off new lists; copper rivets with the usual proportion of burrs, 35 per cent. off; and coppered iron rivets and burrs in 5-lb. carton boxes at 60 and 10 and 10 per cent.; copper burrs alone, 30 per cent., subject to usual charge for half-pound boxes.

HAY WIRE—Sales of this seasonable line are very good and prices are unchanged. Our quotations are: No. 13, $2.45; No. 14, $2.55; No. 15, $2.70; net cash, f.o.b. Montreal.

MACHINE SCREWS — The normal trade is being done. Discounts: Flat head iron, 35 per cent.; flat head brass, 35 per cent.; Felisterhead iron, 30 per cent.; Felisterhead brass, 25 per cent.

BOLTS AND NUTS—Prices as recently revised are firmly held. We quote: 3-8 and smaller, 60 per cent. and 10 per cent.; 7-16 and larger, 55 per cent.

HORSE NAILS—A good volume of business is reported by both manufacturers and jobbers. Discounts: C brand, 40, 10 and 7 per cent.; M.R.M. Co., 55 per cent.; P.B. brand, 55 per cent.

WIRE NAILS—We are still quoting $2.05 per keg f.o.b. Montreal.

CUT NAILS—There is no special feature in the trade. We are quoting $2.20 per keg f.o.b. Montreal.

HORSESHOES—A big business is still being carried on. Prices are firmly held. We quote the following: P.B. new pattern, base price, $3.50 per 100 lbs.; M.R.M. Co. latest improved pattern iron shoes, light and medium pattern, No. 2 and larger, $3.65; No. 1 and smaller, $3.90; snow pattern, No. 2 and larger, $3.90; No. 1 and smaller, $4.15. Light steel shoes, No. 2 and larger, $4; No. 1 and smaller $4.25; featherweight, all sizes, No. 0 to 4, $5.60. Toeweight, all sizes, No. 1 to 4, $6.85. Packing, up to three sizes in a keg, 10c. per 100 pounds. More than three sizes 25c. per 100 lbs. extra.

SPORTING GOODS — A decided impetus is being felt at present. All lines are selling well, but guns and ammunition are coming more and more to the front.

BUILDING PAPER—Business conditions remain practically without change. All prices are the same as at our last report.

CEMENT AND FIREBRICK—A record-breaking year for building throughout the country is making lots of business for the dealers in these goods. Trade continues as heavy as ever, and some brands are scarce. We quote: "Lehigh" Portland in wood, $2.54; in cotton sacks, $2.39; in paper sacks, $2.31. Lafarge (non-staining) in wood, $3.40; Belgium, $1.60 to $1.90 per barrel; ex-store, American, $2 to $2.10 ex-cars; Canadian Portland, $2 to $2.05. Firebrick, English and Scotch, $17 to $21, American $30 to $35; White Bros.' English cement, $1.80 in bags, $2.05 in barrels in round lots.

COIL CHAIN—A moderate trade is reported. We quote: 5-16 inch, $4.25; 3-8 inch, $3.75; 7-16 inch, $3.55; 1-2 inch, $3.35; 9-16 inch, $3.30; 5-8 inch, $3.20; 3-4 inch, $3.05; 7-8 inch, $3; 1 inch, $2.95.

FREEZERS—Nearly all orders now coming in are of the sorting variety, but these are of good size and indicate a healthy condition in the trade. Our quotations: American Twin, 2 quart, $2.30, 3 qt. $2.65, 4 qt. $3.25, 6 qt. $4.15, 8 qt. $5.10, 10 qt. $6.40, 12 qt. $7.75, 15 qt. $9.95, and 20 qt. $13; Gem, 1 pt. $1.35, 1 qt. $1.60, 2 qt. $1.75, 3 qt. $2.15, 4 qt. $2.60, 6 qt. $3.25, 8 qt. $4.20, 10 qt. $5.45, 12 qt. $6.50, 14 qt. $7.25; Blizzard, 1 qt. $1.25, 2 qt. $1.70, 3 qt. $1.95, 4 qt. $2.35, 6 qt. $2.95, 8 qt. $3.70, 10 qt. $4.80, 12 qt. $5.75, 14 qt. $6.75.

GREEN WIRE CLOTH—Sales continue to be large with the price remaining at $1.45 per hundred square feet.

Ontario Hardware Markets.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, July 6, 1906.

The announcement that the Stanley Rule & Level Company's rules, squares, levels and other tools had been advanced from 10 to 20 per cent. comes as a great surprise to both jobbers and retailers. This firm is most conservative and while local jobbers readjusted prices on their goods along with other lines last Spring, the Stanley Company had made no price changes since January of last year, although materials had advanced greatly. It is their custom to let all prices stand from January to January and the advance coming in the middle of the year is, therefore, unprecedented. The increased cost of copper, iron and other metals, boxwood, etc., is the reason given, and the same reason is likely to cause other manufacturers to do as the Stanley Company has done.

Shot has been advanced to net list and tinned rivets have also been changed to net extra 4 cents per pound.

Business is reported to be still good, with little of the expected Summer slackening as yet. While screens, lawn goods, etc., are in less demand, a slight call for loaded shells, etc., tends to balance matters. The bulk of the business now being done is, of course, of a sorting character.

Figures for the half year are not yet available, but it can be taken for granted that the total for the past six

months has been greater than for any similar season in the history of the trade on the local market.

AXES AND HANDLES—Trade continues normal, with no price changes.

CUTLERY AND SILVERWARE — The demand for Fall goods is slow as yet but sorting orders are fair.

SPORTING GOODS—Lawn bowling and cricket goods are still selling well. Fishing tackle is a live line and Fall ammunition is commencing to liven up.

SCREEN DOORS AND WINDOWS — Trade is slackening off, but green wire cloth is still selling well.

HAMMOCKS—The hot weather has created a large sale of these goods. A better class of hammock than usual is being asked for, and manufacturers are kept busy getting out stock.

LAWN MOWERS AND HOSE — Demand is decreasing but considerable sorting is reported.

REFRIGERATORS AND FREEZERS—A big business is being done in refrigerators and ice boxes.

WASHING MACHINES — A normal demand is noted.

CHAIN—We quote as follows : 1 inch, $6.60; 5-6 inch, $4.55; ⅞ inch, $3.95; 7-16 inch, $3.80; ½ inch, $3.65; 9-16 inch, $3.55; ⅝ inch, $3.45; ¾ inch, $3.35.

EXTENSION AND STEP LADDERS —Prices continue as follows : Step ladders at 10c. per foot for 3 to 6 feet, and 11c. per foot for 7 to 10 feet ladders. Waggoner extension ladders, 40 per cent.

POULTRY NETTING—Sales are reported large. We quote : 2-in. mesh, 19 w.g., discount 55 and 5 per cent. All others 50 per cent.

GALVANIZED WIRE — We quote : $2.17½ f.o.b. Cleveland.

BARB WIRE — Prices remain the same. We quote : On gauge 9, $2.40; gauge 12, $2.55; gauge 13, $2.65, f.o.b. Toronto.

OILED AND ANNEALED WIRE — (Canadian)—Gauge 10, $2.31; gauge 11, $2.37; gauge 12, $2.45 per 100 lbs.

WIRE NAILS—The open market continues, with the usual business. We quote : $2.05 base.

CUT NAILS—We quote : $2.20 base, f.o.b. Montreal. Toronto, 20c. higher.

HORSENAILS—"C" brand, 40, 10 and 7½ off list. "M.R.M." brand, 55 per cent off. "Monarch" brand, 50 and 7½ off. "Peerless," 50 per cent. off.

HORSE SHOES — Our quotations continue as follows : P. B. base, $3.65; "M.R.M. Co., latest improved pattern" iron shoes, light and medium pattern, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; snow No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $4.15; No. 1 and smaller, $4.40; featherweight, all sizes, 0 to 4, $5.75; toe weight, all sizes, 1 to 4, $7. Packing, up to three sizes in a keg, 10c. per hundred lbs. extra; more than three sizes in a keg, 25c. per hundred lbs. extra.

RIVETS AND BURRS—Tinned rivets have been advanced and are now quoted net extra 4 cents per pound.

SCREWS—We quote : On gimlet point 70 and 5 per cent. off ; on cone point, 70 and 10 per cent. off list.

BOLTS AND NUTS—Stocks are bare and goods hard to get. The market is firming up in consequence. We quote : 55 and 10 per cent. off list.

CEMENT — We quote : For carload orders, f.o.b. Toronto, Canadian Portland, $1.95. For smaller orders ex warehouse, Canadian Portland, $2.05 upwards.

FIRE BRICK—English and Scotch fire brick, 27c. to 30c.; American low-grade, 23c. to 25c.; high-grade, 27½c. to 35c.

HIDES AND WOOL—Prices have advanced ½c., not because of market conditions, but because buyers are competing for the goods.

HIDES AND WOOL—Lamb skins have advanced 10 cents. A large quantity of wool is being offered by country buyers, who have bought about two cents above the market, and for this reason there is little inclination for the big buyers to purchase.

Hides, inspected, steers, No. 1	0 12½

Canadian Metal Markets.

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, July 6, 1906.

As yet the only metal whose sale shows the effect of the hot spell is pig iron. Orders for iron are still coming in fairly well, but it cannot be said that business is brisk, or that bookings are as heavy as they were earlier in the season. This calmness will in all probability pervade the iron trade for the next month or more.

The situation of ingot tin is almost the same as at our last report. The price keeps bobbing up and down and the market is so irregular that Montreal dealers continue to quote only nominal figures, and fix the price each day after estimating the cost at the moment. As we go to press the metal has firmed up considerably, after advancing for two or three days, but it is impossible to say whether this condition will continue.

For some unaccountable reason pig lead is still advancing. The demand is still large and there seems to be nothing which would justify the downward trend except a speculative movement. We are now quoting from $4.35 to $4.45, this being 5c. lower than the price quoted last week.

Copper is unchanged in price, but the market seems, if anything, to be firmer than ever. From present indications quotations are almost sure to advance as soon as the market is released from the artificial restraint under which the producers have placed it.

Zinc spelter is another ingot metal which continues to show great strength. For some time past the demand has exceeded the visible supply, and producers have sold their stocks for months ahead. It would look as if further advances were at hand.

Sheet zinc is, naturally, very firm, in sympathy with spelter, and the advances recently declared have not only held firm, but are expected to be followed by still further jumps.

Black sheets, Canada plates, galvanized sheets and kindred products are in extremely active inquiry, and the main difficulty experienced by dealers here is in securing quick deliveries. All the producing manufacturers have orders to keep them busy for some time to come.

COPPER—Though the market continues firm no advances have transpired. We still quote : Ingot copper, 21c. to 21½c.; sheet copper, base sizes, 25c.

INGOT TIN—As yet the uncertain condition mentioned in previous reports prevails. We now quote, as a nominal price, 44½c. to 45c. per pound.

INGOT ZINC—The market is even firmer than last week, but prices are unchanged. We still quote : 7¼c. to 7½c. per pound.

ANTIMONY—This metal is still selling on the Montreal market at the same price as last week. There is no sign of a drop, and we continue to quote 30c. per pound.

PIG LEAD—In spite of an active demand the market has again declined, and we now give as the current price $4.35 to $4.45 per hundred pounds.

PIG IRON—We quote as follows :

"Dom.," No. 1, $19.50 to $20.00 delivered Montreal
Usual difference in price for lower grades.

Ferrona No. 1	$19 50	delivered	Montreal
" No. 2	19.00	"	"
" No. 3	18.50	"	"
" No. 4	18.00	"	"
Londonderry	20.50	"	"
Carron No. 1	22.00	"	"
" (special)	21.00	"	"
Summerlee No. 1	22.00	"	"
" No. 3 (soft)	21 00	"	"
Clarence No. 1	18.50	"	"
" No. 3	18.00	"	"
Cleveland No. 1	18.25	"	"

BOILER TUBES—We quote : British and American tubes, 1 1-2 inch, 8 1-2c.; 2 inch, 8 1-2c.; 2 1-2 inch, 10c.; 3 inch, 12c.; 3 1-2 inch, 15 3-4c.; 4 inch, 20c.; 5 inch, 45c. Price per foot net.

TOOL STEEL—Our prices are unchanged : Colonial Black Diamond, 8c. to 9c.; Sanderson's 8c. to 45c., according to grade; Jessop's, 13c.; Jonas & Colver's 10c. to 20c.; "Air Hardening," 65c. per pound; Conqueror, 7 1-2c.; Conqueror High Speed Steel, 60c. ; Jowitt's Diamond J., 6 1-4c. to 7c.; Jowitt's Best, 11c. to 11 1-2c.

MERCHANT STEEL—Trade is good in nearly all lines. Prices remain as follows : Sleigh shoe, $2.17½ ; tire, $2.27½ ; spring, $2.75; toecalk, $2.82 1-2; machinery iron finish, $2.27 1-2; ruled machinery steel, $2.75; mild, $2.17 1-2 and upwards; square harrow teeth, $2.27 1-2. Net cash 30 days. Rivet steel quoted on application.

COLD ROLLED SHAFTING—We are still quoting: 3-16 inch to 1-4 inch, $6.80; 5-16 inch to 11-32 inch, $5.78; 3-8 inch to 17-32 inch, $4.76; 9-16 inch to 47-64 inch, $4.08; 3 1-8 inch to 3 7-16 inch, $3.60; 3-4 inch to 1 7-16 inch, $3.75; 1 1-2 inch to 3 inch, $3.50; 3 1-2 inch to 3 15-16 inch, $3.75; 4 inch to 4 7-16 inch, $4.08; 4 1-2 inch to 4 11-16 inch, $4.42.

GALVANIZED IRON — The demand is very large, with prices well maintained. We quote as follows: Queen's Head, 28 gauge, $4.35 to $4.60; 26 gauge, $4.20; 22 to 24 gauge, $3.65; 16 to 20 gauge, $3.50; Apollo, 28 gauge, $4.25 to $4.50; 26 gauge, $4.10; 22 and 24 gauge, $3.55; 16 to 20 gauge, $3.40; Comet, 28 gauge, $4.25 to $4.50; 26 gauge, $4.10; 22 and 24 gauge, $3.55; 16 to 20 gauge, $3.40; Bell brand, 28 gauge, $4.40 to $4.45; Fleur-de-Lis, 28 gauge, $4.20 to $4.45; 26 gauge, $4.05; 22 and 24 gauge, $3.50; 16 to 20 gauge, $3.35; Gorbal's "Best Best," 28 gauge, $4.20 to $4.45; "Windmill Best," 28 gauge, $4.15; Sword and Torch, 28 gauge, $4.15; Colborne Crown, 28 gauge, $4.20 to $4.45. In less than case lots 25c. extra.

BLACK SHEETS—The market is very firm. We quote: 28 gauge, $2.40; 26 gauge, $2.35; 22-24 gauge, $2.30; 19-20 gauge, $2.30; 8-10 gauge, $2.45.

CANADA PLATES—An active inquiry is being maintained. Prices are steadily held. We quote: 52's, $2.60; 60's $2.65; 75's, $2.75; full polished, $3.75 to $4; galvanized, 52's, $4.10; 60's, $4.35.

TIN PLATES—Large sales are reported. Our prices remain: Cokes, base size, 1C 14x20, $4; charcoal, base size, 1C, 14x20, $4.25.

TERNE PLATES—We are still quoting $6.85.

SHEET ZINC—This metal is decidedly firm. We quote: $8 in casks, $8.25 in less than casks.

SHEET LEAD—No decline has yet taken place. In fact, despite the condition of the primary market, sheet lead is firm. We quote as follows: 2 1-2 lbs., 5½c. by the roll; 3 lbs. and heavier, 5¼c. by the roll; small quantities, 25c. per hundred lbs. extra.

BAR IRON—Trade is brisk, the price being steady at $2.05 f.o.b. Montreal.

OLD MATERIAL—Old copper is dull and hard to sell, with the result that dealers' prices have declined. Reports from United States are to the effect that rubbers have improved. No sales of any importance have been made, but the tone is higher. There are more numerous inquiries from manufacturers, and indications are that, owing to a shortage of stock, prices may go up. As is usual at this season, old metals are very quiet. We quote: light copper, 14¼c.; heavy red brass, 14½c.; yellow brass, 11 1-2c.; light brass, 7 1-2c.; lead, 3 1-4c.; zinc, 4c.; machinery cast scrap, $13; wrought scrap, $12; stove plate scrap, $10.50 to $11; mixed rags, $1 to $1.20 per 100 lbs.; old rubbers, 7½c.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, July 6, 1906.

The drop of one cent in antimony is the only change made locally in ingots or sheets, the market being a steady one. Pig iron is not in as good demand but sheet steel and boiler tubes are selling well to thresher manufacturers. Bar iron is hard to get as are also bolts and nuts, another advance being possible in these lines. Both ingot and sheet tin are in active demand, prices being strong and unchanged. Copper and brass keep very firm and while lead is weaker outside no change has been made in local quotations.

In old material brass and copper are dull, while zinc and old rubber are both commanding slightly higher prices.

PIG IRON—Market is still firm but the Summer dullness is on. We quote: Radnor at furnace, $30; Hamilton at furnaces, No. 1, $20.50; No. 2, $20; Londonderry, f.o.b., Toronto, No. 1, $21.50, No. 2, $21; Middleborough, $21.50.

BAR IRON—The good demand keeps up with stocks light. We quote: $2.15 base, f.o.b. Toronto, with discount of 2 per cent. net cash.

INGOT TIN—An active business continues to be done. Quotations remain unchanged at about 42c. to 44c. per pound.

TIN PLATES—There is a good demand for plates. We quote: Cokes, base size, 14x20, $4; charcoal, base size, 14x20, $4.50.

GALVANIZED SHEETS — More activity is developing, the effects of the prevailing high prices not seeming to be felt very much. We quote: 16 to 20 gauge, $3.45 up.

BRASS—The market continues firm with no price changes. Buying is active and quotations 23c. to 24c. per pound.

COPPER—Deliveries are still hard to get. We still quote: Ingot copper, $20 per 100 lbs., and sheet copper, $25 per 100 lbs.

LEAD—Outside prices have declined but local dealers are still quoting $4.40 to $4.50 for imported pig, and bar lead at $5 per 100 lbs.

ZINC SPELTER—The outside market is firm and the demand locally very brisk. We quote: 7¼c. per lb. for foreign and 5¾c. to 6c. per lb. for domestic.

BOILER PLATES AND TUBES — A lively demand is experienced from threshers. Our quotations are as follows: Plates, per 100 lbs., $2.35; heads, per 100 lbs., $2.60; tank plates, 3-16 inch, $2.45; tubes, per 100 feet, 1¼ inch, $8.50; 2, $8.80; 2½, $10.75; 3, $12; 3½, $15.80; 4. $20. Terms, 2 per cent. off.

ANTIMONY—Another one cent reduction has been made and 27c. is quoted as a result of the easing off.

OLD MATERIAL — Dealers' buying prices are as follows: Heavy copper and wire, 15c. per lb.; light copper, 13½c. per lb.; heavy red brass, 13c. per lb.; heavy yellow brass, 11c. per lb.; light brass, 8¼c. per lb.; tea lead, $3.25 per 100 lbs.; heavy lead, $3.50 per 100 lbs.; scrap zinc, 4½c. per lb.; iron, No. 1 wrought, $10.50 to $11; No. 2 wrought, $3 to $5; machinery cast scrap, $13.50 to $14; stove plate, $10; malleable and steel, $5; old rubbers, 7½c. per lb.; country mixed rags, $1 to $1.25 per 100 lbs., according to quality.

COAL—The usual monthly advance of 10c. has been made, the figures now being: Anthracite in cars at bridges, egg, stove and nut, $5.30; grate, $5.05; pea $3.60, per gross ton.

Standard Hocking, soft coal, in cars, f.o.b. at mines: Lump, $1.50; ¾ inch, $1.40; run of mine, $1.30; nut, $1.25; N. P. and S., $1; slack, 75c.; box cars, 10c. per ton additional.

Youghiogheny soft coal in cars, bonded at bridges: 1¼ inch, $2.50; ¾ inch, $2.40; mine run, $2.30; slack, $2.05.

For Manitoba, British Columbia and Maritime Provinces markets see pages following.

LONDON METAL MARKETS.

From Metal Market Report, July 3, 1906

PIG IRON—Cleveland warrants are quoted at 49s. 10½d., and Glasgow standard warrants at 49s. 7d., making prices as compared with last week 3d. lower for Cleveland warrants and 3d. lower for standard warrants.

TIN—Spot tin opened firm at £179 5s., futures at £176 5s., and after sales of 300 tons of spot and 150 tons of futures closed easy at £179 5s. for spot, £175 10s. for futures, making price compared with last week £2 5s. higher on spot, and 15s. lower on futures.

COPPER—Spot copper opened quiet at £82, futures £81, and after sales of 400 tons of spot and 400 tons of futures, closed easy at £81 10s. for spot, and £80 10s. for futures, making price as compared with last week 7s. 6d. lower on spot and 10s. lower on futures.

LEAD—The market closed at £16 13s. 9d., making price as compared with last week 1s. 3d. higher.

SPELTER—The market closed at £27, making price as compared with last week unchanged.

UNITED STATES METAL MARKETS.

From the Iron Trade Review, Cleveland, July 4, 1906.

Early reports of the ore movement for June indicate that it will be in the neighborhood of 5,800,000 tons, considerably above what had commonly been expected. This rate of increase maintained throughout the season would call for total shipments of about 35,800,000 tons, but this estimate makes no allowance for the late opening of navigation this year, and for ten days' idleness occasioned by the longshoremen's strike. Barring unexpected complications, therefore, this estimate may be considered too low. The ore movement is testing the capacity of range railroads and docks, and it is expected to exceed 6,000,000 tons in both July and August.

The iron and steel trade enters the second half of the year with the outlook entirely favorable. The slight hesitancy recently noted on the part of pig iron buyers in some sections, due to the dissolution of the southern agreement, has disappeared. Prices are steady and buying has been very brisk,

especially in the Chicago district, where 100,000 tons of various grades of pig iron have been closed. A unique contract calls for a large tonnage of malleable Bessemer and Lake Superior charcoal, deliveries running over a period of three years, with prices to be adjusted periodically. The Bessemer Pig Iron Association has sold 30,000 tons to independent interstates for the fourth quarter, and 10,000 tons to the corporation for September delivery. The American Bridge Co. have purchased 12,000 tons of basic, and inquiries for fourth quarter are coming in. The price of ferro-manganese is again advancing, $90 being quoted for August delivery.

An active demand is noted for crude steel generally, and numerous contracts for sheet bars at the new price of $29 per ton has been made. In steel bars sales aggregating some 75,000 tons are reported by eastern mills. The plate market is improved, with considerable business in sight for both sheet and car building. Sheet mills will devote as little time as possible to repairs this Summer, as they are already far behind on deliveries.

U. S. IRON AND METAL TRADES.

From the Iron Age, July 5, 1906.

With the coming of the dog days a new element is perplexing the iron and allied industries in their efforts to meet the extraordinary demands of consumers — and that is the scarcity of labor. It seems to be a case of too much prosperity, the men being inclined to insist upon a period of rest and recreation. This has become manifest in the iron mining regions. In the Connellsville coke region the lack of hands has made it impossible for the H. C. Frick Coke Company to operate more than 90 per cent. of its ovens, and the leading interest is now forced to purchase coke in the open market.

American rail makers are figuring on 140,000 tons of steel rails for export, the greater part of which will probably be closed as soon as deliveries can be arranged. In the congested condition of the American mills this is a serious consideration.

In the tube trade the leading interest has captured two large orders and a Wheeling plant has received the contract for 24 miles of 4¼-inch casing for Wichita.

The failure of the independent sheet and tin plate makers to arrange the scale with the Amalgamated Association for the coming year has caused the closing down of the mills affected.

In the eastern bar iron trade a strike for an advance in wages for puddling and finishing has caused the stoppage of work at six mills and affects about 1,800 men.

In steel making irons the principal events of the week have been the purchase by the Steel Corporation of from 8,000 to 10,000 tons of Bessemer pig at Pittsburg, for August delivery, and of about 20,000 tons of basic pig by a new steel plant on New York harbor for delivery during the latter part of the year.

Chicago records some pretty large transactions in foundry iron, among them being 9,000 tons for the Allis-Chalmers Company and 20,000 tons for the Massillon Iron & Steel Company, divided between northern and southern furnaces. In New England and in the tidewater markets there has been a fair amount of activity, with some business of consequence pending. Virginia furnaces have sold some round lots of iron to western pipe makers at close figures. On the whole, the markets are steadier than they were, and there seems less disposition to force sales on the part of southern makers, while eastern producers have maintained their attitude of waiting and watching.

The leading interest, in view of the scarcity of steel making pig iron, turned for relief to the scrap market and has during the past week picked up about 12,000 tons of heavy melting scrap. This caused a stiffening in prices and has led to the withdrawal of the buyer.

Nova Scotia Trade News.

Halifax, July 3.

The Halifax hardware markets are very steady and the jobbers have made no change in prices since last report. The demand for cement is brisk, as the works department is putting down many concrete sewers in various parts of the city. The city council has decided to purchase one of the Goold-Shapley patent cement mixers. It now looks as if the proposition to bonus the Brandram-Henderson Co.'s lead works is off. Strong opposition has arisen on the part of the citizens to paying the company a bonus of $10,000 per year for ten years, and the council has sent the matter back to a committee for further consideration.

* * *

Rhodes, Curry & Co.'s works at Amherst presents a very busy scene just now. The company have about all the work they can handle for one Summer. The company's sidings are full of cars under the course of construction, and the erecting sheds are taxed to their utmost capacity. They have under construction at the present time ten first-class and six colonist cars, and have started on the order for one thousand box cars for the Canadian Northern Railway. Three of the colonist cars are nearing completion. For the I.C.R. they are building three conductor's vans, which are about ready for shipment, also ten snowploughs and two conductor's vans for the Temiskaming & Northern Ontario Railway. Six refrigerators and a number of dump cars for the Quebec Central Railway, and a number of box cars for the Grand Trunk Railway, are in the course of construction.

* * *

Coal hoisting and general mining operations at No. 6 colliery, Glace Bay, have ceased for a few days, pending the completion of a new track 3,000 feet long, in the pit, and also the new bank-head. It is expected that active mining operations will be resumed in about a week. The new bank-head, which is being built of hard pine, is about fifty feet in height, and will be excellently adapted for its purposes. Scales have also been put in. Hitherto the men at No. 6 have been mining by the cubic yard, but when the work resumes again they will be in a position to work by weight, as in the other collieries of the island.

New Brunswick Trade News

St. John, N.B., July 1.

There has been little, if any, change in conditions in the hardware markets in New Brunswick in the past couple of weeks. The markets have kept to a steady level of late, the slight variations in primary markets making no change in the prices generally prevailing throughout the province. The lines of goods in greatest demand during the month just closed have been, as was, of course, to be expected, haying tools, fencing, screen doors and windows, with goods of use in Summer sports.

Collections have, on the whole, been reported to be fairly good. Perhaps the qualifying word could be dispensed with. In St. John the unfortunate matter during the month was the ill-advised strike in the lumber mills. The strike came to an end last week, when nearly all the mills which had closed down resumed work again, the pilers (who were the men on strike, and who through their action threw at least 800 men out of work) going back to their old places at the same rate of wages as was in force when they went out. Difficulties in the lumber world most always affect the St. John merchants, and in the recent instance we have no exception to the rule, though happily the strike was brought to an end before its effect upon the merchants became serious.

* * *

The metal prices are not showing many changes worthy of any note. The firmness that has been so characteristic for months past is continuing. Sheet lead has shown some advances and lead pipe is tending upward, as, indeed, are all lead products. Brass shoe rivets, cone-pointed screws, gimlet-pointed screws, have also gone up. Cordage prices are firmer.

In St. John there is now considerable building activity, though there have not so far been many large contracts. The Royal Bank is shortly to begin the erection of a large building on King street, a building which is expected to be one of the finest of its kind in Eastern Canada. In provincial points other than St. John, there is also more or less activity in building. In consequence of this activity the demand for building material has been quite strong. The prices in effect have not shown much variation from those of last Fall.

* * *

Prices for American shelf hardware have gone up in consequence of the advance of prices on the part of the manufacturers. The advance by the latter was one of 10 per cent. Notwithstanding the increase in price the dealers have no anxiety about being able to dispose of goodly stocks.

* * *

The stovemakers of the provinces recently met in Sackville in regular meeting. No report of the proceedings was given out.

* * *

W. S. Fisher has returned from a trip to Atlantic City and Lakewood.

Hardware and Metal Conditions in Manitoba.

(Market quotations corrected by telegraph up to 12 a.m. Friday, July 6, 1906.)

Office of HARDWARE AND METAL,
Room 511, Union Bank Building,
Winnipeg, Man.

PRICE CHANGE—

Petroleum—Reduced ½c. per gallon.

The building trade continues very active and wholesale hardware houses are rushed with orders for builders' hardware and contractors' supplies. Values are steady except for a decline of ½c. per gallon in petroleum.

GREEN WIRE CLOTH—Quoted at $1.55 per 100 square feet.

LANTERNS—Prices are quoted as follows: Cold blast, $5.25; coppered cold blast, $7.25; cold blast dash, $7.75; lift, $4.25 per doz.

WIRE—Retail competition is still reported as being very keen. Jobbing prices are steady. We quote as follows: Barbed wire, 100 lbs., $2.90; plain galvanized, 6 to 8, $3.39; 10, $3.50; 12, $3.10; 13, $3.20; 14, $3.90; 15, $4.45; 16, $4.60; plain twist, $3; staples, $3.50; oiled annealed wire, 10, $2.96; 11, $3.02; 12, $3.10; 13, $3.20; 14, $3.30; 15, $3.45. Annealed wires (unoiled) 10c. less.

HORSESHOES — Quotations are as follows: Iron, No. 0 to No. 1, $4.65; No. 2 and larger, $4.40; snowshoes, No. 0 to No. 1, $4.90; No. 2 and larger, $4.65; steel, No. 0 to No. 1, $5; No. 2 and larger, $4.75.

HORSENAILS—Revised list and discounts are now as follows: No. 10, 20c.; No. 9, 22c.; No. 8, 24c.; No. 7, 26c.; No. 6, 28c.; No. 5, 32c.; No. 4, 40c., per pound. Discounts are quoted as follows: "C" brand, 40, 10 and 7½ per cent., "M" brand and other brands, 55 and 60 per cent. Add 15c. per box.

WIRE NAILS—Steady at $2.60 per keg.

CUT NAILS—Quoted now at $2.70 per keg.

PRESSED SPIKES—Prices are as follows: ¼ x 5 and 6, $4.60; 5-6 x 5, 6 and 7, $4.25; ⅜ x 6, 7 and 8, $4.10; 7-16 x 7 and 9, $4.00; ½ x 8, 9, 10 and 12, $3.90; ⅝ x 10 and 12, $3.75.

SCREWS—Discounts are as follows: Flat head, iron, bright, 85 and 10 p.c.; round head, iron, 80 p.c.; flat head, brass, 75 and 10 p.c.; round head, brass, 70 and 10 p.c.; coach, 70 p.c.

NUTS AND BOLTS — Discounts are unchanged and continue as follows: Bolts, carriage, ⅝ or smaller, 60 and 5; bolts, carriage, 7-16 and up, 55; bolts, machine, ⅝ and under, 55 and 5; bolts, machine, 7-16 and over, 55; bolts, tire, 65; bolt ends, 55; sleigh shoe bolts, 65 and 10; machine screws, 70; plough bolts, 55; square nuts, case lots, 3; square nuts, small lots, 2½, hex nuts, case lots, 3; hex nuts, smaller lots, 2½ p.c.

RIVETS—Quoted now as follows: Iron, 60 and 10; copper, No. 8, 34½; copper, No. 12, 40 p.c.

COIL CHAIN — Unchanged in price. We quote: 3-16 inch, $9.25; 5-16, $5.20; 7-16, $4.45; ⅜, $4.10; ¼, $7.20; ⅝, $4.60; ½, $4.30; ¾, $4.

SHOVELS—Discounts on spades and shovels continue 40 and 5 p.c.

HARVEST TOOLS — Discounts continue 60 and 5 p.c.

AXE HANDLES—Quoted as follows: Turned, s.g. hickory, doz., $3.15; No. 1, $1.90; No. 2, $1.60; octagon, extra, $2.30; No. 1, $1.60.

AXES—Prices quoted as follows: Bench axes, 40; broad axes, 25 p.c. discount off list; Royal Oak, per doz., $6.25; Maple Leaf, $8.25; Model, $8.50; Black Prince, $7.25; Black Diamond, $9.25; Standard flint edge, $8.75; Copper King, $9.00; Columbian, $10.75; handled axes, North Star, $7.75; Black Prince, $9.25; Standard flint edge, $10.50; Copper King, $11 per doz.

BUTTS — The discount on wrought iron butts if 70 p.c.

CHURNS— The discounts from list continue as before: 45 and 5 per cent.; but the list has been advanced and is now as follows: No. 0, $9; No. 1, $9; No. 2, $10; No. 3, $11; No. 4, $13; No. 5, $16.

CHISELS—Quoted at 70 p.c. off list prices.

AUGER BITS—The list on "Irwin" auger bits is now the same as on common bits. Discount on "Irwin" is 47½ per cent., and on the common bits 70 per cent.

BLOCKS—Discount on steel blocks is 35 p.c. off list prices; on wood, 55 p.c.

FITTINGS — Discounts continue as follows: Wrought couplings, 60; nipples, 65 and 10; T's and elbows, 10; malleable bushings, 50; malleable unions, 55 p.c.

GRINDSTONES — The price is now 1¾c. per lb.

FORK HANDLES — The discount is 40 p.c. from list prices.

HINGES—The discount on light "T" and strap hinges is 65 p.c. off list prices.

HOOKS — Prices are quoted as follows: Brush hooks, heavy, per doz., $8.75; grass hooks, $1.70.

STOVE PIPES—Quotations are as follows: 6-inch, per 100 feet length, $8.50; 7-inch, $9.25.

DRAW KNIVES—The discount is 70 per cent. from list prices.

RULES—Discounts are 50 and 10 p.c.

WASHERS—On small quantities the discount is 35 p.c.; on full boxes it is 40 p.c.

WRINGERS—Quotations are: Royal Canadian, $33; B.B., $37.75 per doz.

FILES—Discounts are quoted as follows: Arcade, 75; Black Diamond, 60; Nicholson's, 62½ p.c.

BUILDING PAPER — Prices are as follows: Plain, Joliette, 40c.; Cyclone, 55c.; Anchor, 55c.; pure fibre, 60c.; tarred, Joliette, 65c.; Cyclone, 80c.; Anchor, 65c.; pure fibre, 80c.

TINWARE, ETC. — Quoted as follows: Pressed, retinned, 70 and 10; pressed, plain, 75 and 2½; pieced, 30; japanned ware, 37½; enamelled ware, Famous, 50; Imperial, 50 and 10; Imperial, one coat, 60; Premier, 50; Colonial, 50 and 10; Royal, 60; Victoria, 45; white, 45; Diamond, 50; Granite, 60 p.c.

CORDAGE—Quotations are as follows: Rope, sisal, 7-16 and larger, basis, $11.25; Manila, 7-16 and larger, basis, $15.75; Lathyarn, $11.25; cotton rope, per lb., 21c.

SOLDER—Quoted at 27c. per pound. Block tin is quoted at 45c. per pound.

VISES — Prices are quoted as follows: "Peter Wright," 30 to 34 14½c.; 35 to 39, 14c.; 48 and larger, 13½c. per lb.

ANVILS—"Peter Wright" anvils are selling at 11c. per lb.

CROWBARS—Price has been reduced ½c. per lb. Quoted now at 4c. per lb.

POWER HORSE CLIPPERS — The "1902" power horse clipper is selling at $12, and the "Twentieth Century" at $6.00. The "1904" sheep shearing machines are sold at $13.60.

AMMUNITION, ETC. — We quote as follows: Cartridges, Dominion R.F., 50 and 5; Dominion, C.F., pistol, 30; military, 20; American R.F., 33½; C.F., pistol, 5 p.c.; C.F., military, 10 p.c. advance. Loaded shells: Dominion Eley's and Kynoch's soft, 12 gauge, black, $16.50; chilled, 12 gauge, $17.50; soft, 10 gauge, $19.50; chilled, 10 gauge, $20.50. Shot, ordinary, per 100 lbs., $7.00; chilled, $7.50; powder, F.F., keg, Hamilton, $4.75; F.F.G., Dupont's, $5.00.

IRON AND STEEL—We quote: Bar iron (basis), $2.70; Swedish iron (basis), $4.75; sleigh shoe steel, $2.75; spring steel, $3.25; machinery steel, $3.50; tool steel, Black Diamond, 100 lbs., $9.50; Jesson, $13.00.

SHEET ZINC — The price is now $8.50 for cask lots, and $9.00 for broken lots.

PIG LEAD—As noted last week the price has been advanced to $5.25 per cwt. with a reduction of 25c. per cwt. for ton quantities.

AXLE GREASE—"Mica" axle grease has been advanced to $2.75 per case and "Diamond" to $1.60.

BLACK IRON PIPE—Quotations are: ¼ inch, $2.45; ⅜, $2.85; ½, $3.15; ¾, $4; 1, $5.75; 1¼, $7.85; 1½, $9.40; 2, $12.90.

GALVANIZED IRON — Quotations are: Apollo, 16 gauge, $3.90; 18 and 20, $4.10; 22 and 24, $4.45; 26, $4.40; 28, $4.65; 30 gauge or 10¾ oz., $4.95; Queen's Head, 24, $4.65; 26, $4.65; 28, $4.90.

TIN PLATES—We now quote as follows: IC charcoal, 20 x 28, box, $9.50; IX charcoal, 20 x 28, $11.50; XXI charcoal, 20 x 28, $13.50.

TERNE PLATES—Quoted at $9.00.

CANADA PLATES—Prices have been steady since the recent decline. We quote: Canada plate, 18 x 21, 18 x 24, $3.15; 20 x 28, $3.40; full polished, $3.90.

BLACK SHEETS—Prices are: 10 to 16 gauge, 100 lbs., $3.50; 18 to 22, $3.75; 24, $3.90; 26, $4.00; 28, $4.10.

PETROLEUM AND GASOLINE — Petroleum has declined ½c. per gallon. We quote: Silver Star, per gal., 21c.; Sunlight, 22c.; Eocene, 24c.; Pennoline, 25c.; Crystal Spray, 24c.; Silver Light, 22c.; gasoline, 70-72 (engine), 25½c., in barrels f.o.b. Winnipeg.

PAINTS, OILS AND TURPENTINE —Turpentine has been reduced to 97c.

per gallon in barrels. Quotations are: White lead, pure, $7; bladder putty, in bbls., 2½c.; in kegs, 3¾c.; turpentine, pure, in barrels, 97c.; less than barrel lots, 92c.; linseed oil, raw, 64c.; boiled, 67c.

WINDOW GLASS — We quote: 16-oz. O.G., single, in 50-ft. boxes—16 to 25 united inches, $2.25; 26 to 40, $2.40. 16-oz. O.G., single, in 100-ft. cases — 16 to 25 united inches, $4.00; 26 to 40, $4.52; 41 to 50, $4.75; 51 to 60, $5.25; 61 to 70, $5.75. 21-oz. C.S., double, in 100-ft. cases—26 to 40 united inches, $7.35; 41 to 50, $8.40; 51 to 60, $9.45; 61 to 70, $10.50; 71 to 80, $11.55; 81 to 85, $12.60; 86 to 90, $14.75; 91 to 95, $17.30.

THE TIN MARKET.

According to the Metal Market Report the statistics for the first of July make a more favorable showing than was generally expected. Shipments from the Straits for the month of June were small, being 4,472 tons as against 5,094 last year. Deliveries into consumption were large, being estimated at 5,555, of which 3,250 were for the United States.

The London warehouse stock for the first of the month is small, being 1,915 tons. The visible supply for the month shows a decrease, and now stands at 11,956 tons, being almost identically the same as on July 1, 1905.

It will be noticed that although the visible supply is the same as it was at that time, the London price is about £38 per ton higher than it was this time last year. On the other hand, however, it will be recognized that as long as the visible supply of tin is as small as it is, the market will be very susceptible to manipulation, and in this connection we would say that there is considerable talk at the present time of a corner developing in London in August tin, and supplies for that month are reported to be already very much concentrated.

DIDN'T HIT HER BACK.

"So Jenny struck you, did she, Tommy? I hope you did not hit her back."

"No, ma'am. I hit her face."

A LIQUID AIR CARTRIDGE.

The latest scientific novelty to interest Parisians is the liquid air cartridge. Recent experiments have shown that in order to prepare a liquid air cartridge it suffices to take an ordinary empty cartridge and place on the bottom a capsule of fulminate surrounded with cotton and to pour on top of this a certain quantity of liquid air. These cartridges can not be used for criminal attacks, as they have to be fired less than five minutes after their preparation, because the liquid air evaporates in that time.

E-Z FLOOR STAIN
BEAUTIFIES YOUR FLOORS
AND
MAKES OLD FURNITURE NEW
EASY TO APPLY. QUICK TO DRY.
THE WINNIPEG PAINT AND GLASS CO., LIMITED
Warehouses—CALGARY, EDMONTON WINNIPEG

We Manufacture in Winnipeg:
Metal Shingles, Sidings and Ceilings, Corrugated and Plain Round Conductor and Eavetroughs in 10 ft. lengths, Metal Windows, Cornices, Skylights.
WINNIPEG CEILING & ROOFING CO., - - Foot Scott St., Fort Rouge
TELEPHONE 2845

DAVID REID & CO.
MANUFACTURERS' AGENTS
22 Stanley Block, - Winnipeg, Man.
Invite correspondence from firms wishing representation in Winnipeg who are makers of the following goods:—Bar, hoop, and sheet iron; galvanized, plain and corrugated iron; steel of all kinds; tinplates; sheet lead and zinc; ingot tin; iron pipe and fittings; black and galvanized soil pipe and fittings; carriage springs and axles; bolts, nuts and rivets; anvils, vises, forges, and smiths' bellows; spades and shovels; wire and cut nails; enameled hollow ware; paints, oils and varnishes; Portland cement; roofing materials; stoves, ranges, furnaces, etc., etc.
30 Years' experience in Hardware and Iron trade.

PILKINGTON BROS., LIMITED
(WORKS: ST. HELENS, ENGLAND)
BRITISH PLATE AND WINDOW GLASS
ALSO
Wired Rolled Wired Polished Plate Prismatic Glass
Figured, Rolled and Cathedral Rolled Glass
Muffled, Obscured and Enamelled Glass Plain and Bevelled Mirrors, etc.
Prices on application. FULL STOCK IN OUR WINNIPEG WAREHOUSE.
OFFICE AND WAREHOUSE: 157 MARKET ST., - - - WINNIPEG, MAN.
P.O. Box 164. Telephone 3271.
Also Montreal, Toronto and Vancouver

THE CEILING——THE ORDER
People who want secure, sanitary homes cannot be talked out of getting
METAL CEILINGS
Hardwaremen who keep in touch with their customers, and our Ceiling, cannot be euchred out of their orders.
But you must have the ceiling in stock if you want to talk business.
You can get Samples and Prices.

PRESTON, ONTARIO

HARDWARE TRADE GOSSIP

Ontario.

H. E. Moore, Oakville, was a visitor in Toronto during the week.

John Nasmyth, Lotus, called on the jobbing trade in Toronto this week.

The Coslett Hardware Company are to open a hardware store at Fort William.

J. H. M. Robertson, of Montreal, president of the James Robertson Company, is in Toronto.

H. W. Anthes, of the Toronto Foundry Company, Toronto, is on a business trip through Western Canada.

W. G. Ballantyne, of the Sherwin-Williams Company's Toronto office, is spending a fortnight's holidays at Montreal.

The Hobbs Hardware Company's ball team defeated the Elliott & Marr team at London last week by a score of 10 to 3.

James Heatley, Brampton, and T. D. McGregor, of McGregor & Reid, Peterboro, called on plumping supply men in Toronto this week.

P. R. Cumming, of the Cumming Manufacturing Company, Renfrew, was a caller at the Toronto office of Hardware & Metal on Tuesday.

Leroy Chown, son of W. W. Chown, Belleville, recently accepted a position with Ross Bros., Edmonton, and is rapidly learning those winning "western ways."

E. P. Paulin, Goderich, is having the basement of his entire store cemented, and is otherwise making room preparatory to adding a plumbing and tinsmithing business.

W. B. Wise, one of the "S. W. Paint" travelers from across the line, was in Toronto this week on his way to Honey Harbor, where he will spend the Summer with his family.

J. G. Bingham, of the sales staff of Rice Lewis & Son's wholesale department, is leaving Toronto next week to accept a position with Marshall-Wells & Co., at Portland, Oregon.

The Brown-Lee Co. are to establish a factory at Guelph for the manufacture of medicine and toilet articles. Harry Mahoney, the well-known plumber, is the treasurer of the company.

W. B. Morrow, of H. S. Howland, Sons & Co., Toronto, is spending his holidays in Grey County, his place in the sample room being filled by L. N. Vanstone, who is spending a few months in the warehouse after about a dozen years' active work on the road.

R. J. Cluff & Co., Toronto, are moving into their magnificent new building on the corner of Lombard street and Post Office lane this week. Several additions are being made to the company's traveling and sales staff in order to handle their rapidly increasing business.

E. G. Paddon, until recently Toronto city traveler for the Canada Paint Company, left last week for Winnipeg, his future headquarters. R. Munro, Montreal, accompanied Mr. Paddon. The company are opening up new territory and Mr. Paddon will call on the trade between Winnipeg and the Rockies.

A quiet but elegant home wedding was solemnized at Tillsonburg last Wednesday afternoon, when Miss Marion Logie Livingstone was married to Edward I. Torrens, hardware merchant, and one of the town's most successful and best known young business men. After the ceremony Mr. and Mrs. Torrens left on a wedding trip down the St. Lawrence River to Quebec and up the Saguenay River.

Quebec.

G. C. Denman has been registered as a hardware merchant at Montreal.

The assets of Huet & Co., hardware merchants, Montreal, are to be sold.

T. Burrows, of Lacolle, paid a business trip to Montreal a few days ago.

Dastos & Goyette, Montreal, have been registered as hardware and paint dealers.

J. J. Sophus, Montreal, has just returned from a business trip to New York.

C. Lamarche, general merchant, of Lake Talon, Ont., was in Montreal on business this week.

J. B. Gauthier, of Charlemagne, was among the out-of-town buyers to visit Montreal this week.

H. C. Hunt, of the Belleville Hardware Co., was in Montreal this week calling on the trade.

A. Depocas, of the Seybold & Sons Company, Montreal, is taking his vacation this week and next.

Filion & Gravel have registered as grocers and hardware merchants at Notre Dame des Neiges.

Gordon C. Seybold returned on the Lake Erie from England. Mr. Seybold reports a very enjoyable trip.

W. A. Martin, of Caverhill, Learmont & Co.'s traveling staff, is spending the week at the firm's headquarters in Montreal.

J. W. Richardson, of Caverhill, Learmont & Co., Montreal, has returned from a vacation spent on the Maine coast.

Arch. Macfarlane, manufacturers' agent and metal broker, Montreal, has returned from an extended visit to England.

J. T. Schell, lumber merchant, Alexandria, Ont., called on some of the Montreal hardware jobbers during the week.

Herb. Seybold, of the Seybold & Sons Company, Montreal, spent the week end and Dominion Day at Lakefield and Lachute.

George McGowan, of Caverhill, Learmont & Co.'s purchasing department, is taking his vacation and is stopping at Shawbridge.

D. Sinclair, hardware and stove dealer, of Paris, Ont., and wife, spent part of the week in Montreal, the guests of Mr. Lilley, Point Claire.

R. E. T. Pringle, manufacturer of electrical supplies, Montreal, is moving from Dalhousie street to his new factory at St. Henri.

E. Leclerc, plumber and tinsmith, of Grand Mere, County Champlain, was in Montreal on business last Tuesday, and called at the office of Hardware & Metal.

W. H. Evans, of the Canada Paint Company, Montreal took advantage of Dominion Day to spend three days in Quebec, where he was registered at the Chateau.

G. A. Burton, of Lewis Bros., Montreal, has left for his home in Richmond, Va., where he will spend his vacation. Mr. Burton went via New York, sailing down the Hudson.

Among the out-of-town hardware buyers to visit Montreal on business during the past week were: I. England, Knowlton; P. Beaulieu, St. Jerome; J. A. Ferguson, Lost River; and R. S. Marston, Warden.

John A. Gordon, Montreal, secretary of the National Plumbers' and Steamfitters' Association, returned on Thursday from Atlantic City, where he was attending the convention of United States plumbers.

V. D. Stead, of London, England, who has been touring Canada, called at the Montreal office of Hardware and Metal on Wednesday. Mr. Stead wishes to take up agencies for Canadian firms, either buying or selling.

Geo. Cumming, of the advertising department of Frothingham & Workman, Montreal, spent the holiday at Mont Tremblent, Lac Cochrane, in the Laurentians. George made a record for himself as a fisherman.

Western Canada.

Buttner Bros., hardware merchants, Carman, Man., have sold their business to R. J. McConnell.

Garrod & Caswell have sold their machinist business at Moose Jaw, Sask., to the Moose Jaw Machine Works Co.

W. W. Davidson, of the Davidson-Fraser Lumber Co., has purchased the hardware business of Wm. Ainsley, at Drinkwater, Man., and will conduct same in connection with the lumber yard business.

A. J. Falconer, of Deloraine, Man., president of the Western Retail Hardware Association, was in Winnipeg last week on his return from a trip to California, where he went a short time ago to bring his family back to Manitoba. Mr. Falconer has been in San Francisco since the disaster and in conversation with Hardware and Metal he said that the destruction was much more complete than he had imagined from newspaper reports. It will be the work of years to clear away the debris.

Maritime Provinces.

J. D. Bell, Montague, P.E.I., is desiring to dispose of his stove and tinware business. Montague is one of the most prosperous towns on the island, and is in the heart of the best farming section. This is a good opportunity for either a single or married man who is desirous of a good location.

United States.

Officers of the Russell & Erwin Mfg. Co., of New Britain, Conn., have organized a new corporation, known as the Russell & Erwin Mfg. Co. of New

York, to conduct the sales department and warehouse of the parent firm in New York.

Great Britain.

George D. Wood, of Winnipeg, was a recent caller at the London office of Hardware and Metal. Although Mr. Wood is away primarily on a pleasure trip, and is accompanied by his wife and daughter, he will attend the convention of the Chambers of Commerce, at which A. L. Johnson, F. W. Stobart and C. M. Bell, of Winnipeg, will also be present. Although Mr. Stobart has recently become a permanent resident in England, his interest in Canada, and his own city in particular, is undiminished.

W. M. Campbell, managing director of the International Gas Appliance Co., of Toronto, is now in England, and called at the London office of Hardware anh Metal a few days ago. Although this is Mr. Campbell's first visit to the Old Country and the Continent, he is getting over the ground with a rapidity that one only expects to find in those who know the Old Country markets. He is at present on the Continent, where, after attending to business, he will take a short trip through Italy, returning to Toronto before the end of July. Mr. Campbell reports very satisfactory progress amongst manufacturers, with whom he has entered into agreements of considerable importance.

METAL ROOFING SCANDAL.

A new phase was opened up in the Toronto civic investigation last week when it was shown that in the securing of several civic contracts, particularly the new market building, the architects and metal roofing manufacturers and contractors worked together to boost the contract prices to figures which allowed the successful tenderers to hand over a tidy sum to the unsuccessful ones. One architect admits he got his hand in the pie, while another swears he didn't, although a contractor swears he handed over a share of his proceeds to the second architect. In many respects the case is similar to the recent plumbers' investigation, although, so far, it is not shown that the roofing men had an association, and no incriminating secretary's books have been secured.

HAMILTON BOARD OF TRADE.

F. R. Close and R. A. Robertson have been installed as president and vice-president respectively of the Hamilton Board of Trade, and the following appointed to the council: J. W. Lamoreaux, Geo. C. Coppley, W. Vallance, W. C. Breckenridge, W. A. Holton, T. W. Watkin, Cyrus A. Birge. The arbitration committee will be J. W. Lamoreaux, F. C. Bruce, Hon. John S. Hendrie, and C. R. McCullough.

ASK RIGHT TO MEET TOGETHER

A large deputation from the convention of the Retail Merchants' Association at Ottawa this week interviewed Sir Wilfrid Laurier and members of his Cabinet complaining that under the anti-combine clause of the criminal law of Canada they have not even the right to meet together to discuss matters of trade interest without subjecting themselves to severe penalties, and declaring that this part of the Criminal Code had been placed on the statute books by men who knew nothing of trade conditions. Individually the retailers' investments were not always very large, but collectively they represented the biggest capital outlay in the Dominion.

Sir Wilfrid replied that if the statements made by the deputation were correct the Criminal Code was certainly in need of amendment. Of course it was too late to deal with the matter this session, but he would be glad to discuss the matter further during the coming recess.

Western Canada Factory, 797 Notre Dame Ave., Winnipeg, Man.

ONTARIO TRAVELERS FREE.

The secretary of the Commercial Travelers' Association of Canada has received information through the Treasury Department, Provincial Legislature, Quebec, that a clause has been inserted amending Act 5, E.D.W. VII., cap. 14, to read as follows:

"However, no such commercial traveler from any other province in Canada which authorizes commercial travelers from this province to do business in such province without a license shall be obliged to take out a license under this article."

Under this amendment commercial travelers from Ontario are not required to take out a commercial traveler's license in the Province of Quebec.

A Winnipeg concern is to establish a branch foundry at Saskatoon. A new company will be organized and work will be commenced as soon as plans are completed.

The monthly report of the Department of Trade and Commerce of Canada for March shows total imports of iron and steel and their manufactures amounting to $3,651,295 as against $4,376,153 in March, 1905. The imports from the American market were valued at $3,133,130, as compared with $3,900,250. The decrease is entirely owing to the closing of the Canadian market to steel rails which were brought in duty free in March, 1905, to the value of $1,459,804. Most other important items show a heavy increase in American importations, machines and machinery having risen from $512,336 to $706,287, and wire from $159,159 to $265,903.

ALUMINUM'S HISTORY.

The manufacture of aluminum by the electrolytic method, writes P. B. Ball, Canadian commercial agent at Birmingham, England, was begun in America by Hall, at New Kensington, in 1888, and in 1889 an identical process was in use at Neuhausen, in Switzerland, the details having been independently worked out by Heroult and Kiliani. Since 1889 the production of aluminum has increased enormously, and the annual output of the metal at the present time is estimated to be 8,000 tons as compared with 85 tons in 1889. From $2.62 per pound, the price has fallen in the same period to 30c. per pound, and a still further reduction in price would be possible if a cheaper raw material than refined alumina could be used in the electrolytic baths.

Nine works are now operating either the Hall or the Heroult methods of aluminum production, and between 40,000 and 50,000 h.p. are employed in the industry. The nine works are situated as follows: America, 3; France, 2; United Kingdom, 1; Germany, 1; Switzerland, 1; Austria, 1; and a works is in course of erection in the Valley of Pescara, Italy.

The British Aluminium Company, with works at Foyers, in Scotland, and the Neuhausen Aluminium Company, which controls the production in Germany, Switzerland and Austria, have been increasing their capital and extending their plant, and a considerable increase in the output of the metal is anticipated in the near future.

Increasing Demand for the Metal.

The demand for the metal is growing in connection with motor car and railway carriage work, the latest example of its use being for the inside of cars for one of the London underground tube lines. The cheaper brands are now being employed in the casting of iron and steel. The Goldschmidt "Thermit" process for welding tramway rails, and for repairs of castings, etc., is a new use responsible for the annual consumption of many tons of aluminum in the form of powder.

The price of aluminum in Europe during 1905 rose owing to a strike of the men at one of the works in France. Toward the end of the year, however, the price again declined, and the December list of the British Aluminium Co. gave 36c. per pound as the price of 98.96 per cent. metal in small lots, and 32c. per pound for ton lots and over.

Important Invention.

Betts, an American inventor, during 1905, patented a process for refining aluminum by electrolysis. This depends upon the impure alloy of the light metal as anode, in a bath of molten cryolite, containing alumina in solution, while pure aluminum forms the cathode. All the materials in this bath are kept in the molten state, and the three components are maintained in their respective positions by their different specific gravities, the impure alloy being the heaviest and the pure aluminum the lightest of the constituents of the bath. Aluminum can be parted from iron, silicon, copper, and other impurities by this method, and it may possibly prove of great use in cheapening the production of the metal, since it will enable producers to use bauxite directly in the reducing baths in place of the much more costly refined alumina. By the present methods of production, using refined alumina in the reducing baths, it is improbable that any great reduction in price can occur, and, therefore, the advent of new methods of dealing with bauxite to enable it to be used in place of alumina are of considerable importance.

An arrangement has been made between the British and American manufacturers whereby the United States supplies Canada with sheets, ingots, etc., but whether this applies to the manufactured article or not is uncertain. With the vast water powers at the command of Canada, and the increasing demand for the metal, she should be in a very favorable position to manufacture aluminum against any of the countries at present manufacturing.

Mayor Sutherland and William German, M.P., Welland, on June 29 turned the first sod of the large works to be erected by the Ontario Iron & Steel Company at that place. Mayor Sutherland said the works would be on an extensive scale. There is to be 80,000 feet of floor space. The steel casting shops will be 200 by 125, the steel foundry 86 by 175, and the pipe and tube building 300 by 119. These are the three main buildings, and besides these there are to be three others—the smelter, with a 70-foot frontage, the office facing on the concession opposite the M.C.R.R., and the pumphouse. Water for the works is to be pumped from the Welland Canal.

The Iron Trade Review says more metal and machinery is purchased in the United States by Canada than any other country in the world.

The dealer who handles *Sherwin-Williams Paints and Varnishes* need not fear competition. They have no equal for painting and varnishing purposes and they will make and sustain for him a reputation for quality, economy and satisfaction. If you want a *safe* line, a line that represents the *standard of excellence*, write us today and get our proposition.

REPUTATION—THE GREAT THING NECESSARY.

The great thing necessary to success in business, and in life for that matter, is to secure a reputation.

Once your reputation is made the rest is easy. Emerson said, "If a man writes a better book, preaches a better sermon or makes a better mouse trap than his neighbor, though he build his house in the woods the world will make a beaten path to his door."

Such is reputation. It's worth a mighty effort. It's no easy matter, however, making it. It's a hard, slow process. It requires much skill, great patience, and infinite persistence.

Reputation is the world's estimate of the man or the concern; and the world is suspicious, and slow to appreciate or applaud but quick to condemn. It's a long hard pull up to a good reputation, and an easy rapid fall down to a poor one.

There's no escaping judgment—and we're all found out sooner or later for exactly what we are; a faker may pass for a while, but he won't last.

In business it's the goods you sell and the methods you employ in selling them that establish your reputation. The highest reputation can only be gained by selling good goods by right methods.

Quality and value are the two things to keep constantly before you—high quality and good value. The best in anything at a fair price is the best value.

A workman can't do good work with poor tools, neither can a merchant gain a good reputation with poor goods. Don't try it. Stick to the best, and the best only. It pays in the long run—in profit and in satisfaction. As soon as the public know that they can depend upon everything that comes from your store your reputation is made and your success assured.

There are not many merchants who have the nerve to handle or sell only the best, neither are there many manufacturers of this order. The temptation to sell something cheap and inferior for immediate profit is too great for the majority—and away goes their reputation. They never amount to much. Their trade is a sort of catch-as-catch-can business—there's neither profit nor glory in it.

It's harder and slower at the start to build a business on quality, but when you get it, it sticks. It's something to be proud of, something you can become enthusiastic over, something you can put your heart into as well as your energy and ability.

How can a man get enthusiastic over cheap stuff, how can he put his heart into a make-shift? It's not possible, and if you can't put your heart into your business get out of it, and get into something you believe in, something you can swear by, something you delight in. It's being in love with your work that counts. There's a touch of the heart in every success—in every reputation. — Walter H. Cottingham, general manager of the Sherwin-Williams Paint Co.

LINSEED OIL ADULTERATION.

A law passed by the New York Legislature at its recent session takes cognizance of the sale of adulterated spirits turpentine and linseed oil, of which no little complaint has been made in that state. The enforcement of the new law will, if effectually carried out, work a revolution in the matter of the sale of these adulterations. It is well known that a very large quantity of adulterated turpentine and linseed oil is sold throughout the country.

The newly enacted New York law imposes a penalty on the dealer for the selling of adulterated turpentine, linseed oil, raw or boiled. It is intended that the method of enforcing the statute shall be the same as that followed in carrying out the provisions of the pure food law, where the inspectors of the state department enter the stores of sellers of the food products and take samples of the goods offered for sale.

Agricultural Commissioner Wieting has already given his inspectors instructions to proceed along the lines set down for the enforcement of the new law. Dealers who have doubts as to the purity of the turpentine or linseed oils they are offering to the public have been warned that they should have their wares examined on this score before the inspectors come around, as the penalties for violation of the statute are severe. It is not improbable that some criticism may develop in connection with the operation of the law so far as relates to the provision for the division of penalties collected for violations. One-half of such penalties are to be awarded to the agent or inspector of the department upon whose complaint the violation was discovered and punished.

On the face of it the law seems likely to be effective. It imposes the penalty on the dealer, who will therefore take special care to see that he buys only pure turps and oil, for the extra profit to be derived from handling adulterated products is not sufficient to tempt him to a violation of the law. Then the law puts a premium on prosecution of offenders by its division of penalties collected. The inspectors will doubtless be vigilant in enforcing this law when they see in it a source of revenue for themselves. The legitimate linseed oil and turpentine trade welcomes this sort of legislation.—Paint, Oil and Drug Review.

PAINT AND OIL MARKETS

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, July 6, 1906.

Notwithstanding the break in this week's business owing to the holiday, trade is still moving briskly, and, without any great flourish or extraordinary rush, shipments still appear to be well maintained.

All signs of a coming Summer lull are at present wanting. The staples have kept firm without any change in quotations, and while the demand for Paris green continues from Montreal eastward, there seems to be an easing off in the call for this product in the west.

Varnishes and japans have been fairly busy. Strong orders are also being received for coach colors and wagon paints.

Linseed oil maintains its position in the market, and no further fluctuation has taken place since the middle of last month. Turpentine is also firm, without any sign of an immediate change in price.

TURPENTINE — Conditions now apparent make for a steady market. We quote as follows: Single barrels, 86c. per gallon; two barrels or over, 85c. per gal.; for smaller quantities than barrels, 5c. extra per gal. is charged. Standard gallon is 8.40 lbs., f.o.b. point of shipment, net 30 days.

LINSEED OIL — Business is still good, and the market is now firm. Our quotations are: Raw, 1 to 4 barrels, 54c.; 5 to 9 barrels, 53c.; boiled, 1 to 4 barrels, 57c.; 5 to 9 barrels, 56c.

GROUND WHITE LEAD — We quote: Best brand Government standards, $6 to $6.25; No. 1, $5.65 to $5.90; No. 2, $5.30 to $5.65; No. 3, $5.05 to $5.30, all f.o.b. Montreal

DRY WHITE ZINC—Our prices are: Red seal, 7c. to 8c.; French V.M., 6c. to 7c.; Lehigh, 5c. to 6c.

WHITE ZINC (ground in oil — We quote: Pure, 8c. to 9c.; No. 1, 6½c. to 7½c.; No. 2, 5¼c. to 6¼c.

PUTTY—Our quotations are: Pure linseed oil, $1.75 to $1.85; bulk in barrels, $1.50; in 2-lb. irons, $1.80; in tins, $1.90; bladdered putty in barrels, $1.75.

ORANGE MINERAL—We quote as follows: Casks, 7¼c.; 100-lb. kegs, 7½c.; smaller quantities, 8½c.

RED LEAD — Prices are firmly held as follows: Genuine red lead in casks, $6; in 100-lb. kegs, $6.25; in less quantities at the rate of $7 per 100 lbs.; No. 1 red lead, casks, $5.75; kegs, $6, and smaller quantities, $6.75.

GUM SHELLAC — We quote: Fine orange, 55c. per lb.; med. orange, 50c. per lb.; bleached shellac (white), 60c. per lb.

SHELLAC VARNISH — We quote: Pure white, $2.90 to $2.95; pure orange, $2.70 to $2.75; No. 1 orange, $2.50 to $2.55.

MIXED PAINTS—Prices range from $1.20 to $1.40 per gallon.

CASTOR OIL—Firsts in cases, 8½c.; in barrels, 8c.; seconds in cases, 8c.; in barrels, 7½c.

REFINED PETROLEUM — We quote as follows: American water white, 17c.; Canadian prime white, 15½c.; astral, 20c., ex warehouse.

PARIS GREEN—We quote the following prices, which are subject to withdrawal or change: Barrels, 600 lbs., 19¼c. per lb.; kegs, 250 lbs., 19½c. per lb.; 50-lb. drums, 20c. per lb.; 25-lb. drums, 20½c. per lb.; 1-lb. pkts., 100 lbs. in case, 21c. per lb.; 1-lb. pkts., 50 lbs. in case, 21c. per lb.; ½-lb. pkts., 100 lbs. in case, 23c. per lb.; 1-lb. tins, 100 lbs. in case, 22c. per lb. Terms 2 per cent. 30 days.

GASOLINE—The ruling quotation at present is 24c. in bbls.

BENZINE—Market is steady at 24c. in bbls.

WINDOW GLASS—We quote: First break, 50 feet, $1.85; second break, 50 feet, $1.95; first break, 100 feet, $3.50; second break, 100 feet, $3.95; third break, 100 feet, $4.25; fourth break, 100 feet, $4.50; fifth break, 100 feet, $4.75; sixth break, 100 feet, $5.25; seventh break, 100 feet, $5.75; eighth break, 100 feet, $6. Diamond star, first break, 50 feet, $2.05; second break, 50 feet, $2.25; first break, 100 feet, $3.90; second break, 100 feet, $4.30; third break, 100 feet, $5.25; fourth break, 100 feet, $6; fifth break, 100 feet, $7; sixth break, 100 feet, $7.50; seventh break, 100 feet, $8.50. Double thick, first break, 50 feet, $3.20; second break, 50 feet, $3.50; first break, 100 feet, $6.25; second break, 100 feet, $6.50; third break, 100 feet, $8.25; fourth break, 100 feet, $9.50; fifth break, 100 feet, $11; sixth break, 100 feet, $12; seventh break, 100 feet, $13.50; eighth break, 100 feet, $16; ninth break, 100 feet, $17.50; tenth break, 100 feet, $19.50; eleventh break, 100 feet, $23.50; twelfth break, 100 feet, $28.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East.
Toronto, July 6, 1906.

Both turpentine and linseed oil show a decline this week of two cents, these, however, being the extent of the price changes. Some cutting on the local market is the chief cause in the reduction of turpentine, conditions in the south not showing a similar fall. The English seed market is considerably easier as a result of the export of large quantities of American seed from

Creosote Barn and Roof Paint

BRANTFORD, CANADA

THOMAS BLACK, 76-82 Lombard St., WINNIPEG, Man.

SPECIAL

"VERONICA" GREEN

This Green is made solely by ourselves, from the essential chemicals in our own Color Works in Montreal.

The

"VERONICA"

is a soft rich green of great covering power. It is very durable and manufactured especially for Window Blinds, Shutters, Verandahs, Screen Doors, Engines, Agricultural Implements and all kinds of wood and metal work, and for all purposes where a green paint is indicated.

The

"VERONICA" GREEN

is manufactured only by THE CANADA PAINT COMPANY, LIMITED, of Montreal, Toronto and Winnipeg.

"VERONICA"

is copyrighted as a Trade Mark with the Department at Ottawa, Canada.

The

"VERONICA" GREEN

is made in four shades, viz.:—Light, Middle, Deep and Extra Deep. Insist upon the

"VERONICA"

as the undoubted superiority of this Green will probably lead to disappointing imitations.

For prices follow the prices of EVERGREEN in our 1906 Catalogue.

The

"VERONICA"

is put up as follows:—

In Dry Form, 6-lb. and 10-lb. Tins, 100-lb. Kegs and 600-lb. Barrels.

In Paste Form, 1-lb., 2-lb. and 5-lb. Tins, 12½-lb. and 25-lb. Irons.

THE CANADA PAINT COMPANY Limited

Duluth, the Americans having held the seed off the market in order to keep prices up, and with new seed in sight they have for the first time in several years unloaded the surplus on the English market. With stocks available from Indian and Argentine sources much lighter than usual, however, the receipt of the American seed in not likely to affect the market much more than it has already done, and steady prices are considered probable during the balance of the Summer. The movement of both oil and turp has been very satisfactory, and a large trade is looked forward to in July.

The past half year has been a record one in all paint lines, and while figures are not yet obtainable it is certain that all past records have been broken. Trade is keeping up remarkably well, and the usual slackening during the Summer months has not been felt to any extent as yet.

WHITE LEAD— Ex Toronto, pure white, $6.30; No. 1, $5.92 1-2c.; No. 2, $5.55; No. 3, $5.30; No. 4, $5.05 in packages of 25 pounds and upwards; 1-2c. per pound extra will be charged for 12 1-2 pound packages; genuine dry white lead, in casks, $5.40.

RED LEAD—Genuine in casks of 500 lbs., —$5.75; ditto, in kegs of 100 lbs., $6.60; No. 1 in casks of 500 lbs., $5.50; ditto, in kegs of 100 lbs., $5.75.

DRY WHITE ZINC—In casks, 7c.; in 100 lbs., 7 1-2c.; No. 1, in casks, 6c.; in 100 lbs., 6 1-2c.

LIQUID PAINTS— Pure, $1.20 to $1.35 per gallon; No. 1, $1.10 per gal.

BARN PAINTS—70c. to 80c.

BRIDGE PAINTS—75c. to $1.

CASTOR OIL—English, in cases, 9½c. to 10c. per lb., and 11c. for single tins.

REFINED PETROLEUM—Trade continues normal. We quote: Canadian prime white, 14c.; water white, 16c.; American water white, 16c. to 18c. ex warehouse.

CRUDE PETROLEUM— We quote: Canadian, $1.38; Pennsylvania, $1.64; Ohio, 98c.

SEED OIL MARKETS OF ENGLAND.

The condition of the linseed and cottonseed oil markets abroad is of direct interest to Canadian dealers, owing to the probable demand there for American seed. That the oil markets have been dull is well known; that some improvement is now noticeable is a new encouragement. The Oil and Colorman's Journal in a review of the linseed oil market for May, does not take a pessimistic view. Our London contemporary says:

"The conditions at the end of April were not altogether unfavorable to higher prices, especially considering the fact that May is an active month in the oil and paint trades; but we have been spared any extravagant rise in values which would certainly have to be paid for in declining trade throughout the latter part of the year. In linseed oil the fluctuations in value have been very trifling, the highest London quotations having been 22s. per cwt. and the lowest, 21s.; but there has been a tendency to decline in the premium payable for forward delivery, which may perhaps indicate that speculators do not think quite so well of the future. There is, however, nothing tangible to show that the price of linseed oil is likely to be much lower through the Summer, except, perhaps, the feeling that if it does not advance in the Spring months it is not capable of doing so in the Summer. Such a feeling is, however, not always justified by facts, for two years ago there was a distinct improvement in linseed oil prices during June and July.

"The position of the market so far as supplies are concerned is not unhealthy. The enormous receipts of 1904 have been diminished rapidly, and we are now receiving linseed at a rate only about half as great as was the case in that year. Our two principal sources of supply, the East Indies and Argentine, send us only moderate quantities, and there is no probability of anything excessive coming from these countries during the current year. With regard to the Argentine, where there is always the alternative of wheat culture, it is clear that the present price of linseed will not tempt agriculturists to increase their sowings. Of course, linseed still pays better, bulk for bulk, than wheat, but it takes a great deal more out of the ground, and the difference in the price per quarter must be considerable to counterbalance this disadvantage."

PROGRESSIVE RETAILING

THE EVIL OF OVER-BUYING.

It is strange how some retail merchants get the impression that when they place a large order for goods they are performing a master stroke of business and are building up for themselves the prestige of being heavy buyers, which can be secured in no other way. It wouldn't be very difficult to find retailers who have been forced out of business through their desire to carry a large stock, much out of proportion to the needs of their community. Overbuying has probably driven as many retailers to the wall as any other one failing.

The time is past when a merchant is compelled to buy enough goods to last several months; for with the railroad facilities that exist at present it is possible to replenish stocks upon such short notice that with the exception of a very few cases a dealer can get almost anything he needs in a very few days from the time the order is placed. Treating with this subject of over-buying a cotemporary says:

"Don't be a warehouse. Run a store, if you are in the mercantile business. Don't load yourself up with a lot of things you can not sell for a year or two. Don't fill your stock rooms with goods on which you will have to pay eight per cent. interest on overdue accounts.

Redouble Your Energy.

"You are running a store to sell goods, not to house them for the manufacturer and pay interest at the same time. There may be some advantage to a big concern in buying goods in large quantity, but to the ordinary merchant it's different. The dealer in the city can perhaps make a neat speculation at times by buying in carload lots, and storing his goods. But as a general thing the dealer who buys in carload lots does so with the intention of pushing the goods out of his store with redoubled energy. He doesn't buy simply for the sake of having a lot of stuff on hand.

Buying a Great Science.

"It is better for the average merchant to buy just enough goods to carry him until he can get another shipment. Buying is a great science; it is as great a science, perhaps, as the science of selling. Many merchants are good buyers and poor sellers, but more are poor buyers and good sellers. It is the buying end where most failures occur.

Don't Lose Your Discounts.

"There are a good many reasons for buying in small quantities. Chief among these is that you don't put all your money on the shelf. You keep the cash in hand, available for discounts. A merchant who can simply take advantage of every discount is in a position to undersell his competitor who never can take a discount. Just as an example: say discounting terms on net hardware are 2 per cent. off 10 days, due in 60 days; on regular hardware, 6 per cent. off 10 days, due in 90 days. So the merchant who neglects taking his discount on net goods and lets his bill go to maturity is paying the rate of over 14 per cent. per annum, while on regular goods he pays over 20 per cent.

Don't Live in Ox Team Days.

"It is an advantage to have clean goods coming in every week. Don't buy all you think you can sell of an item. The trains run both ways every day, and a two-cent stamp will do the work. The custom of buying a six months' supply at a time is a relic of the days when the country merchants drove 100 miles with an ox team to buy their goods. It is different now. But there are dealers who persist in following the ox team method down to this day.

Meeting Competition.

"Shrewd buying is one way to meet mail order competition. This doesn't mean trying to beat down the drummer's prices, but it means buying small quantities of things and keeping the store right up-to-date and fresh stocked from one year's end to another. You will get more satisfactory results by starting the season with a month's supply of goods and adding as the trade demands."

PAY ATTENTION TO CHILDREN.

It is very poor policy on the part of the dealer to neglect paying the same attention to a child sent to his store by a housekeeper, as he would to a grown person. Nowadays this is not so noticeable, but a few years ago it was a very common mistake. Even yet many merchants do not seem to realize the harm they are doing themselves in this way. Country merchants are more to blame in this respect than are the city merchants. The latter are aware of the fact that to keep their patronage they must give the same satisfaction to the child as they would to the parent. Country storekeepers very often keep a youngster waiting from twenty minutes to half an hour. He is passed for the grown persons who happen in after his arrival, and the merchant does not seem to consider him until everybody else has been served.

Nothing is more aggravating to the average housewife than this. Very often she is in a hurry to obtain the groceries and being unable to go herself sends the child, thinking it will receive the same consideration as she herself. There being no telephone system in many small towns, as there is in the city, she must wait in patience. She cannot hurry up the grocer, but must be content to await his pleasure. The result very often is that the next time she has occasion to send the boy or girl her instructions are to go to some other store.

THE CRANKY CUSTOMER.

The cranky customer is indeed a great thorn in the merchant's flesh. A customer that is apparently never satisfied, but who is always complaining, asking for what seems the impossible, is the despair of many grocers. In the end very often the grocer becomes disgusted and openly makes known to the customer that he no longer wants to be bothered with his or her patronage. It is generally "her." This is a mistake on the part of the storekeeper. A customer may be pretty near "the limit," but should never in any way be encouraged to patronize your competitor's store. Many hardware dealers have customers who are simply particular that all they buy is just exactly what they want. These are often classed in the same category as the "crank," which is certainly unwise on the part of the merchant.

Always strive to please your exacting customers. If they are a little more particular than others who make their purchases from you; if they are often very annoying, put up with it. It is all in the business. If you cater to them satisfactorily your reward will be not only in the patronage extended to you by them, but also in the free advertising they give you and your store. A housekeeper may be very "cranky" as they say, but if you give her satisfaction, and treat her as you should, she will advertise the fact freely to her friends.

BUILDING AND INDUSTRIAL NEWS

HARDWARE AND METAL would be pleased to receive from any authoritative source building and industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories, foundries or other works, railway or mining news. All correspondence will be treated as confidential when desired.

Seaforth has voted the W. H. Willis Shoe Co. $10,000 to establish a shoe factory.

John Pentland is promoting a company to manufacture cement blocks at Brantford.

The German Cardboard & Photo Mount Co. are to establish a factory at Peterboro.

Fire did $40,000 damage to the Munro-McIntosh carriage factory at Alexandria, Ont., last week.

New York and Edmonton promoters are endeavoring to secure a street railway franchise from the Town of Prince Albert.

H. McKenzie, Sydney, Australia, was in Peterboro last week securing prices on saw mill machinery for shipment to Australia.

Electric power developed on the Canadian side at Niagara Falls is now transmitted to Syracuse, N.Y., 150 miles away.

The Canadian Manufacturers' Association will hold its next convention at Winnipeg, Sept. 17 to 19. About 300 eastern representatives are expected to make a trip to the Pacific Coast over the C.P.R., returning over the Canadian Northern from Edmonton.

H. E. Winters, representing an English syndicate, who is in Canada, says his concern will probably erect three factories, one in Cape Breton, another near Parry Sound, and a third in British Columbia, where "Ammonal," a powerful explosive for use in railway construction, will be manufactured.

The South African Parliament is considering a preferential law allowing rebates on certain classes of goods imported from Canada. Manufactured articles, manufactured iron or steel, cement, etc., are to be subject to a rebate of 3 per cent., and this will go a long way towards paying shipping rates to the Cape.

Railway Supplies, Limited, have been incorporated under Ontario charter, with a share capital of $250,000, for the purpose of manufacturing rails, rail joints, etc., and all articles into the manufacture of which metals enter. The provisional directors are J. S. Lovell, Wm. Bain, Robt. Gowans, E. W. McNeill and W. F. Ralph, all of Toronto, and the head office to be at Toronto.

Oil Well Supply Co., Ltd., have been incorporated under Ontario charter, with share capital of $100,000, for the purpose of carrying on the business of a general machine shop, and the manufacture of drill tools, etc., now carried on by the Oil Well Supply Co. The provisional directors are James Joyce, J. A. MacKenzie and E. A. Westland, all of Petrolea, with the chief place of business at Petrolea.

The Canadian Rail Joint Co. have been incorporated under Ontario charter with a share capital of $250,000, for the purpose of manufacturing rails, rail joints, etc., and all articles into the manufacture of which metals enter. The provisional directors are J. S. Lovell, Wm. Bain, Robt. Gowans, E. W. McNeill, W. F. Ralph and S. G. Crowell, all of Toronto, with chief place of business at Toronto.

The Renfrew Brick & Tile Mfg. Co. have been incorporated under Ontario charter, with a share capital of $20,000, for the purpose of taking over the business of Thos. Henderson, of Renfrew, and of manufacturing and dealing in brick, tile, artificial stone, etc. The provisional directors are Thos. Henderson, J. E. Barnet, Allan Francis, P. S. Stewart and Robt. Leitch, all of Renfrew, with head office at Renfrew.

Welland Concrete Co., Limited, have been incorporated under Ontario charter, with a share capital of $200,000, for the purpose of manufacturing and dealing in brick, cement blocks, gravel, stone, builders' supplies, etc. The provisional directors are George Arnold and J. P. Eastman, of the Township of Pelham, County of Welland; B. J. McCormick amd S. P. Townsend, of Windsor, and C. F. Berry, of Detroit, Mich., with head office at the Town of Welland.

A plant to manufacture Trojan powder may be established near Spokane, Wash., in the near future to supply the boundary country, the Coeur d'Alene district and the British Columbia camps. If the arrangements are completed the new enterprise will have a capacity of about six tons per day. Trojan powder is a new explosive, claimed to do away with nitroglycerine and acids. It is claimed the new powder is as powerful as dynamite and is much safer to use.

The Canadian Newcombe Motor Co. have been incorporated under Dominion charter, with a share capital of $600,000, for the purpose of carrying on the business of manufacturing and dealing in power generators and motors, and to construct vehicles, agricultural implements, etc. The provisional directors are W. F. Borland, Westmount, Que.; Duncan McDonald, W. J. White, F. L. Wanklyn, and P. F. Richardson, all of Montreal, with head office at Montreal, Que.

The Kemp Manure Spreader factory, Stratford, owned by the Massey-Harris Co., will be re-opened in the Fall as a binder twine factory. The Massey-Harris Co., unlike the large American implement manufacturers in the United States, has never engaged in the manufacture of binder twine, they buying their supply from the established manufactories. It has now been decided to make their own supply and the Stratford buildings of the company are to be fitted up for the purpose. This will necessitate the installation of a large amount of new machinery.

The Canadian Pacific Railway is preparing to construct a steel bridge across the Belly River, at Lethbridge,

which will be one of the largest, if not actually the most extensive bridge, of its kind in the world. It will be one mile in length and 300 feet high, and will be a double bridge with the railway track on the top. Its construction will enable the company to shorten the mileage between Lethbridge and Macleod, as well as to lower the grade, enabling heavy loads to be carried at less cost. Owing to the steel works being so rushed with orders at present it is thought that it will be impossible to obtain the structural material for delivery this season, but the masonry will be proceeded with at once so as to have it in readiness for the girders next year.

It is estimated that before Winter arrives five thousand miles of new railway will be laid in the Canadian west in the district bounded roughly by Winnipeg, Prince Albert, Edmonton, Lethbridge and Regina. This will mean an enormous circulation of money, as at a very conservative estimate of $20,000 per mile, the operations will cost $100,000,000. This huge railway expansion, the largest within the history of the Dominion, is mainly on through lines, such as the G.T.P., the C.N.R., and the Hill projects, which are aiming for transcontinental business. The construction of these through lines, however, will necessarily involve later activity in building connecting roads as feeders, so that it is safe to estimate that for several years to come a sum approximating $50,000,000 will be spent annually in gridironing the west with railways. Besides the G.T.P. line, which will run from Winnipeg to the Pacific, the other western lines are all exhibiting most unusual activity. The C.P.R. has more than 1,200 miles of branch lines either under construction, nearing completion, or in course of survey. The Canadian Northern has already 827 miles completed between Edmonton and Winnipeg and 429 more between the Prairie City and Port Arthur, while 1,400 miles of main and branch lines are under way. The Edmonton offices of the C.N.R. were opened recently for business, and are said to be the handsomest offices on the system, with over four thousand feet of floor space, while the C.P.R. is completing at Winnipeg one of the finest terminal stations and hotels on its whole system. It is fairly evident that the year 1906 will go down to history as the epoch of the greatest railway expansion in the records of the Dominion.

BUILDING NOTES.

McNarney & Kehoe, Huntsville, are to build a new hotel.

E. Michener is to erect a business block at Red Deer, Alberta.

The O'Keefe Brewery Co., Toronto, are to build a $3,500 hotel.

Mr. McLeod, tailor, Moncton, N.B., is building a three-storey brick block.

J. F. Williamson is to build a new machine shop 40x92 feet at St. John, N.B.

Tenders have been called for a four-roomed school building at Sintaluta, Man.

A. W. Vowell, Vancouver, has taken out a permit for a $40,000 hotel building.

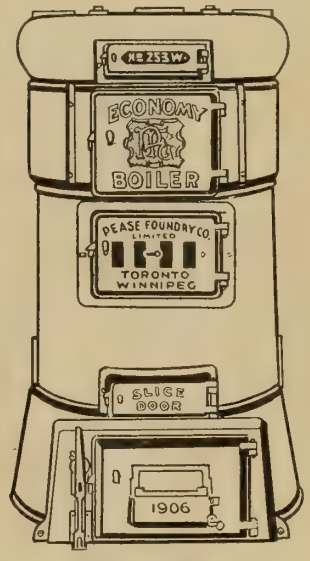
Boiler Beacons



By E. CONOMY.

Signal 3.--Smoke Connection

If you'll examine **ordinary** hot-water boilers you'll find the **smoke connection is on top.**

If you'll operate **one** of these **ordinary** boilers you'll find the **moment** the Cold Blast Check Dratt **is opened, that** moment the **temperature** of **water** in **top section goes down.**

So much for the **ways** of **ordinary** boilers.

This Boiler leads them all.

Now for the **ways** of **Particular** Boilers.

THE

"Economy"

Hot-Water Boiler

has its **smoke connection on back, not on top,** so that the **heat** of **water** in **top section** is **not affected** when the Cold Blast Check Draft **is opened.**

Also, the smoke connection of the "Economy" boiler **being on back,** instead of on top, means that the "Economy" Boiler **can be placed** in a **lower** cellar than **ordinary** boilers.

Give these Indisputable Facts full consideration.

☞ More "light" will follow.

Pease Foundry Co., Ltd.

TORONTO

Pease-Waldon Co., Ltd.

WINNIPEG

The Canadian Northern Railway Co. will erect a $12,000 station at Prince Albert, Sask.

The International Harvester Co. proposes to erect a large warehouse at Port Arthur.

D. W. Keils, Vancouver, is to erect a tourist hotel at Capilano, the site of Vancouver's waterworks.

The new King Edward Hotel at Prince Albert will cost $30,000, being built largely of cement blocks and stone.

Tenders are being asked for the erection of the new $18,000 building of the St. Joseph's Orphanage Society, Winnipeg.

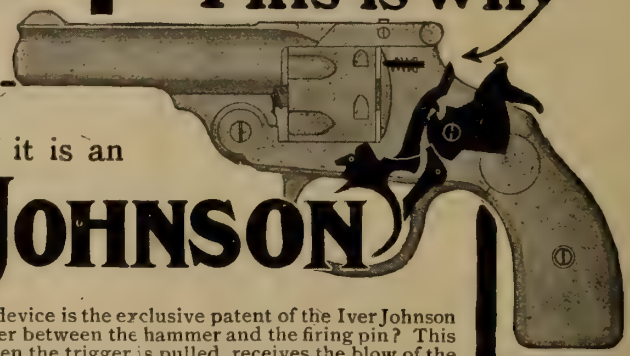
Shultz Bros., Brantford, have the contract for the erection of A. Berg & Son's lime brick plant to be established in that city.

A new $3,400 Methodist church is to be built at Vermillion, Alberta, and Price & Prentice are to erect a fine hotel at the same place.

J. H. G. Russell, Winnipeg, is calling for tenders for a three-storey warehouse for Crane & Ordway and for an addition to the Ashdown block at Winnipeg.

Following are some of the latest structures to be contracted for at Winnipeg : Five houses for J. C. Hicks, to cost $10,500; Ridley Taylor, residence, cost $8,500; addition to the Kilgour-Rimer building, to cost $25,000; R. J. Mackenzie, six houses; A. Carlson, residence, $4,000; Presbyterians, church, to cost $3,500; J. A. Martin, residence, to cost $4,000.

Toronto's building returns for June show a slight increase in the number of building permits issued, and the value of new buildings as compared with the same month last year. The figures for the half year indicate an increase of nearly $2,000,000 over the amount for the same period last year. Following are the figures : January to June, 1905, $4,494,326 ; 1906, $6,195,470.



CEMENT ELEVATORS.

Cement is rapidly coming into general use for building purposes. In the great Peavy elevator fire at Duluth the wooden working-house, containing 938,000 bushels of grain, valued, in all, at nearly $1,000,000, was a total loss, but the concrete annex, containing an immense quantity of rye, flax and wheat, went through the fire intact. According to a report in the Northwestern Miller, the two buildings were about 35 feet apart, and the heat from the millions of feet of dry timber in the wood house was so great that steel rails between the two were subjected to a welding and fusing temperature, while for hundreds of feet away it was so hot that men could not live in the glare. The 8 to 12 inches of cement between this heat and the wheat within the nearest row of bins in the concrete house were amply sufficient to protect the grain from injury. With the foregoing in view, the new elevator of the Goderich Elevator & Transit Company, now in course of erection, is being constructed throughout of cement and steel. Both working-house and storage bins are being built of those materials exclusively.

The Town of Steelton, a suburb of the Soo, has passed a by-law to install a municipal system of water works.

Accidental Discharge Impossible—

This is why

True only if it is an

IVER JOHNSON

The positive safety device is the exclusive patent of the Iver Johnson Revolver. See the lever between the hammer and the firing pin? This lever is raised only when the trigger is pulled, receives the blow of the hammer and transmits it to the firing pin. **That's why** you can throw a loaded Iver Johnson against a stone wall without fear—no discharge can possibly follow, as the hammer **never** touches the firing pin. An Iver Johnson never fails when you **pull the trigger** and never "goes off" when you don't.

Iver Johnson Safety Automatic

Prices—Hammer $6.50, Hammerless $7.50.

Iver Johnsons are sold by dealers the world over, or direct from us if your dealer won't supply

Please send for descriptive catalogue, free upon request. It tells all about it.

IVER JOHNSON'S ARMS AND CYCLE WORKS, FITCHBURG, MASS.

SAND WILL DO IT.

I observed a locomotive in the railroad yards one day,
It was waiting in the roundhouse where the locomotives stay;
It was panting for the journey, it was coaled and fully manned,
And it had a box the fireman was filling full of sand.

It appears that locomotives cannot always get a grip
On their slender iron pavement, 'cause the wheels are apt to slip;
And when they reach a slippery spot their tactics they command,
And to get a grip upon the rail they sprinkle it with sand.

It's about the way with travel along life's slippery track;
If your load is rather heavy, you're always slipping back.
So if a locomotive you completely understand,
You'll provide yourself in starting with a good supply of sand.

If your track is steep and hilly, and you have a heavy grade,
If those who've gone before you have the rails quite slippery made,
If you ever reach the summit of the upper tableland,
You'll find you'll have to do it with a liberal use of sand.

If you strike some frigid weather and discover, to your cost,
That you're liable to slip on a heavy coat of frost,
Then some prompt, decided action will be called into demand,
For you'll slip way to the bottom if you haven't any sand.

You can get to any station that is on life's schedule seen
If there's fire beneath the boiler of ambition's strong machine,
And you'll reach a place called Flushtown at a rate of speed that's grand
If for all the slippery places you've a good supply of SAND.

TRADE WITH NEWFOUNDLAND.

Newfoundland's trade returns for the year ending June 30, 1905, show a 100 per cent. increase in imports from Canada and a 50 per cent. decrease from the United States. Canada is still far behind its competitors, however, particularly in groceries and dry goods. The hardware lines listed are as follows :

	Great Britain.	Canada.	U. S.
Cement.....	$ 2,533	$ 812	$ 58 92
Cordage	29,555	4,920	5 787 00
Hardware.....	148 379	61,771	93,094 00
Ironware.....	12,540	29,016	38,648 00
Iron of all kinds..	32,401	2,944	2,874 00
Nails.....	12,285	9,748	17,574 00

PLUMBING AND STEAMFITTING

THE OLD PLUG BASIN.

To find desirable furnished rooms in the pleasant old quarters of New York, surrounded by Washington square and Fifth avenue, was not an easy matter this year, but after a lot of hunting and inspecting we finally landed in one of the charming old-fashioned mansions between Fourteenth street and the square.

The second day after we were settled we noticed that the ceiling in one corner of the room was dripping water like a raincoat. A hurry call for the manager of the house brought back the answer that he was out and would not return until evening. Meanwhile the water continued to pour down the sides of the room, soaking furniture and carpets and threatening to flood the entire floor. Without waiting for the worst to happen, I ran upstairs to the bathroom. A simple glance was sufficient to reveal the cause of the trouble. It was the old-fashioned stationary washstand. Someone of the roomers had used it early in the morning and left the rubber plug in the bottom outlet. The water was half turned off and a wash rag had floated up to the perforated overflow, covering it so completely that the water had run over the edge of the basin and down the outside of the waste pipe, then through the ceiling.

It was an easy matter to stop the flow of water, but the damage had been done and there was nothing to do but wait for the return of the manager. That evening he tapped on the door of the sitting room and, on coming in, said rather curtly: "You wanted to see me?" "Yes," I said, "I wanted you this morning to show you the flood that came into this room." While I was telling him how it happened he was looking up at the drenched ceiling, probably doing some mental figuring on the cost of repairs. Turning suddenly, he broke out with an oath, and then apologized for it.

"This isn't the first time I've had this happen since I took this house," said he, "and I have made up my mind it will be the last time. I rent furnished room to old couples from the country. It was either that old man or the old woman who have the room over this one that caused all this trouble. They come here to spend a few weeks in the city and always pitch onto rooms in this part of the town, and nearly every time I get a pair like that in any of my rooms I have a mess and a big bill for repairs. It makes me tired. I don't think they do it on purpose. They simply don't know any better, because they are not accustomed to anything more than the pump in the back yard."

His reflection on old people was so harsh and disagreeable that I felt as though he was applying it personally to me. I am getting to be an elderly person myself, but I know modern plumbing as well as any layman in the land and I made him understand that I was not one of the jays to be put on his list.

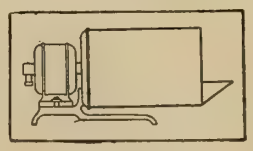
As he appeared to be a little more moderate in his tone, I said to him: "Doesn't all of this trouble come from the old plug basins you have in your houses in this section?"

"Yes," he said, "it does."

"Well," said I, "the fault lies in a great measure with those old-time basins. I looked at the one in the bath room this morning and saw it dated back to the middle of the nineteenth century. It was probably made at Trenton, N.J., when they first began to make sanitary earthenware forty years ago.

"There have been lots of improvements made in stationary washstands since that time. Nearly all of the modern styles are more elaborate and costly than the ordinary plug basin, which is the same old thing to-day that it was years ago, and it has probably caused more damage than any one article of bathroom fixtures that was ever put into a home."

Just here the manager smiled and said: "Well, that's all right, but what good does it do me to know all this about plug basins, as you call them?"



"Not any, perhaps," I answered, "but it would do you some good in your later experience if the architects and builders were to suggest to sanitary potters some improvement in the ordinary plug basin that would not make it cost much more than it does at present. If nothing else can be done, it is perfectly feasible to make a plug basin with two overflow outlets instead of one, as they are now made. A wash rag left in a basin with two outlets could not be drawn by suction against both of them at the same time. What is wanted is more overflow capacity in the standard plug basin and then it will be as safe and serviceable as any of the more expensive styles of basins, which are placed in modern houses, and they could be made to replace the old single vent basins without having to renew the marble tops or any part of the plumbing."

As the manager reached for his hat he looked at me rather quizzically and said: "Well, you seem to be pretty well up on the subject of plug basins. You go ahead and get the pottery people to make some improvement in 'em and I'll rip these old things out and put in the new ones rather than have this trouble and expense two or three times a year."

I made no promise on that score, but did resolve that I would tell the story to the sanitary potters and depend upon them to do the rest. They are quick enough to adopt new ideas and work them out successfully, as is evidenced by the splendid improvements they have made in all other branches of sanitary potting, and if it is put up to them in the proper way they can and will produce a standard plug basin which the most careless person can not overflow, no matter how long the water may be left running with the plug in the bottom.—The National Builder.

ELECTRIC VENTILATOR.

A recently invented electric ventilator is operated by a small electric motor contained in the case, with the fan. Air is drawn in through a screen which removes all dust and dirt, and on entering the ventilator strikes a basin of

Electric Ventilator.

water which cools and moistens the air. For sick rooms small pieces of ice can be put in the water or any desired disinfectant. If dry air is desired instead of the water or ice, use lime, which is a rapid absorber of moisture.

MASTER PLUMBERS' CONVENTION.

The 24th annual convention of the U. S. National Association of Master Plumbers, held at Atlantic City on June 26 to 28, was the greatest in the history of the organization, delegates being present from Mexico for the first time. John A. Gordon, Montreal, secretary of the Canadian National Association of Master Plumbers, and Harry Mahoney, Guelph, treasurer of the same body, were the Canadian representatives, they being accorded the usual privileges of fraternal delegates to the convention. President A. J. Hammond, of Winnipeg, wrote a letter expressing his regrets at being unable to be on hand.

Interesting essays on various subjects prepared by members of the association were read and discussed, some of which will be reprinted in these columns in future issues.

The apprenticeship question was debated at length, the general report being that the dearth of good mechanics was constantly increasing and it was necessary for the employers to do what they can to increase the number of boys learning the trade. Open shops and trade schools were two plans adopted successfully in some cities.

The sanitary committee recommended that a committee be appointed from this association to confer with like committee, if such could be appointed from the National Health Committee of National

Inspectors of Plumbing of the United States, to form a code of laws and regulations governing plumbing and all sanitary requirements, both water supply and drainage, also fixtures and material necessary for the betterment and protection of the public health in all cities, towns and states, for the reason that from all the years of the existence of this national association, at which reports and essays have been received, they have not been adopted or enforced, but merely in proceedings, and from experience and information the inspectors and boards of health in many cities and states formulate, interpret and enforce their rules, according to their own interpretation and situation of the surroundings of their localities. Therefore, any recommendations from this association would not be acceptable to all, so that the conference of the three committees would bring forth many good and practical ideas, from which a law governing the many places in which water and drainage is used, also a standard of workmanship, material and fixtures for the better safety and comfort of the many who dwell, travel and visit this country, as any disease contracted from a town or city, especially during the vacation season, when all persons, both young and old, change for rest and supposed health, would spread an epidemic in various houses, schools; in fact, all places where people mingle for instruction, living and enjoyment, for good health and happiness, so that a national law of health which could be so worded and formed to be acceptable to all localities, would better serve the wants of the people and a strict enforcement by conscientious officials who could be paid from the fines from violations of such law, and possibly from a proper license fee for all those who desire and are qualified to engage in this, the greatest of all happiness and comfort, the public health."

R. B. Moodie, Dayton, Ohio, was chosen president for the coming year and Louisville, Kentucky, was selected as the city where next year's convention will be held.

MUELLER'S CONVENTION EXHIBIT.

The accompanying cut shows the Mueller exhibit at the Atlantic City convention last week, the display consisting of the regular Mueller line of compression, fuller and ground key work, lead flange work, caulking tools, brass ferrules, pipe reamers, pressure regulators, pipe jointers, etc. The shelf upon which the goods were displayed had a hexagon shaped top which was revolved by a small electric motor. The stand was covered with green velvet and was surmounted by a handsome gold plated No. 4½ fuller double bath cock. Messrs. F. B. and Philip Mueller were in charge.

SEWAGE DISPOSAL AT BIRMINGHAM.

According to P. B. Ball, Canadian commercial agent at Birmingham, the Tame and Rea Drainage Board, which recently adopted a modern method of sewage disposal, has since decided to extend the bacteria beds to nearly double the present area. The board has jurisdiction over an area of ninety square miles, the population of which approaches 900,000. The normal flow of sewage which has to be dealt with is no less than 25,000,000 gallons a day. To treat with such a large volume by the broad irrigation system, the 200,830 acres of land, which constitutes the drainage board's estate, would be quite inadequate, but during the past four years bacteria beds have been constructed, and at the present time one-fourth of the sewage is dealt with in this way. It has been found that the Birmingham sewage was rather deficient in bacteria, and that a larger number of organisms would accelerate the process of fermentation and liquefaction, and afterwards of oxidation and nitrification. In the sewage as it arrives at the out-fall works there are about 400,000 bacteria per cubic centimetre. It was also found that the acids from many of the city's industries were inimical to the life of the bacteria. This difficulty has been overcome, however, by increasing the capacity of the tanks at the out-fall works, and now the organisms are cultivated to such an extent that the sewage at Cudworth, where the bacteria beds are situated, contains no fewer than 17,000,000 bacteria per cubic centimetre.

The Bacteriological Process.

In the liquifying or "septic" tank, the main sewage undergoes a process which frees it from suspended matter, such as road grit, and of the organic and inorganic substances which go to form what is technically known as "sludge." This "sludge" has been successfully converted into an inodorous composition. This transformation is almost entirely due to the work of micro-organisms, and though the process has not yet been carried to the full extent of its possibilities, yet the method is now fairly well understood. After the "sludge" has been eliminated, the sewage is at present conveyed down the Tame Valley in an eight-feet diameter culvert, from which branch off numerous subsidiary carriers, and is evenly distributed over the land, where the process of disintegration is a natural one. But the land would only take a certain quantity of sewage, and a nuisance seemed imminent. Engineers and chemists, however, evolved the bacteria bed method, and one acre of bacteria beds is capable of doing as much work as from 50 to 70 acres of land, and it is this and similar striking facts which have induced the drainage board to pursue their present policy.

The underlying principle of purifying sewage in bacteria beds is to provide, by means of stone, or other hard particles, a habitat for the aerobic (those that require free oxygen for their vitality) and nitrifying bacteria. The best method of constructing such a habitat has exercised the minds of experts for many years, and when Cameron first introduced the system, the medium was placed in a tank, and after a certain number of hours the sewage which had been passed in was allowed to flow out again into the river. Many large cities in England have that system, but it has been admitted latterly that the more scientific, as well as more economical method, where physical conditions will admit of it, is the adoption of what is called a percolating bed, or continuous filter. By this method the media which form the habitat for the bacteria are placed upon a false floor which rests on a concrete plane, and are built up to a height of about five feet. The bed is surmounted by distributing pipes, constructed in various ingenious ways, through which the sewage is sprayed over the surface of the beds. The drops percolate through the medium in about three or four minutes, and the sewage becomes changed into an innocuous liquid, which may be passed into the stream with no harmful effects.

Medicine Hat, Sask., has voted to raise $40,000 for a new water works system and $8,000 to extend the natural gas system.

PLUMBING MARKETS

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, July 6, 1906.

A slight decline in solder is the only price change this week. This is occasioned by the continued fluctuations of tin and the downward tendency of pig lead, which has been somewhat marked during the past few days, so that lower prices are again quoted.

The turn-over of all the Montreal plumbing supply houses this week is as large as ever. The holiday seemed to make very little difference except in the size of Tuesday's mail, and the later days in the week developed such heavy orders that the week's aggregate is quite up to the average.

Prices on nearly all lines are very steady. In the case of lead pipe, quotations are somewhat easier in tone owing to the conditions of the primary market. The same discounts, however, are given as have ruled for some time past.

RANGE BOILERS—Business is active, with a good inquiry for all lines. We quote the following prices: Iron clad, 30 gal., $5; 40 gal., $6.50 net list; copper, 40 gallon, $22.50; 35 gallon, $27; 40 gallon, $30.75 net.

LEAD PIPE — Prices and discounts continue the same as at our last report, but it is thought that if present conditions in the pig lead market continue easier prices will soon be effective. Our quotations follow: 20 per cent., f.o.b., Montreal, Toronto, St. John, N. B., Halifax; f.o.b., London, 15c. per hundred lbs. extra; f.o.b. Hamilton, 10c. per hundred lbs. extra.

IRON PIPE FITTINGS—Orders show no abatement in the volume of business. We are quoting: Discounts on all sizes of nipples up to 6-inch, 67½ to 70 per cent.

IRON PIPE—Still no advance has taken place. Conditions of this branch of the trade are the same as have been noted for many weeks. We still quote: Standard pipe in lots of 100 ft., regular lengths, 1-4 inch, $5.50; 3-8 inch, $5.50; 1-2 inch, $8.50; 3-4 inch, $11.50; 1 inch, $16.50; 1 1-4 inches, $22.50; 1 1-2 inches, $27; 2 inches, $36.50; discounts on black pipe, 1-4 inch, 62 per cent.; 3-8 inch, 62 per cent.; 1-2 inch, 71 1-2 per cent.; 3-4 inch and upwards, 73 1-2 per cent. Discounts on galvanized pipe: 1-4 inch, 47 per cent.; 3-8 inch, 47 per cent.; 1-2 inch, 61 1-2 per cent.; 3-4 inch and upwards, 63 1-2 per cent. Extra heavy pipe of 100 feet lots are quoted as follows: 1-2 inch, $12; 3-4 inch, $15; 1 inch, $22; 1 1-4 inches, $30; 1 1-2 inches, $36; 2 inches, $50. The discount for black pipe is 71 per cent., and for galvanized, 61 per cent.

SOIL PIPE AND FITTINGS — Jobbers report plenty of business in this line. Discounts as follows: Standard soil pipe, 50 per cent. off list. Standard fittings, 50 and 10 per cent. off list; medium and extra heavy soil pipe, 60 per cent. off. Fittings, 60 per cent. off.

SOLDER—The unsteady condition of the market in ingot tin and pig lead has caused a decline in both grades of solder, and we now quote: Bar solder, half-and-half, guaranteed, 24c.; No. 2, wiping solder, 19½c.

ENAMELWARE—Good orders are being filled here from day to day. Prices remain: Canadian bath tubs, plate E1, 5 feet, 1st quality, $20.65, special $18.65; plate E11 and E21, 5 feet, 1st quality, $19.50, special $17.15; plate E35, 5 feet, 1st quality, $24.65, special $22.40. American baths, rolled rim, 5 feet 2 1-2 inch rim, $22.25; 3 inch rim, $29.25. Lavatories, discounts, 1st quality, 30 to 30 and 5 per cent.; special, 30 and 10 to 40 per cent. Sinks, 18 x 30 inch, flat rim, 1st quality, $2.60, special $2.45.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, July 6, 1906.

Lead pipe has at last responded to the stiffening conditions existing in the primary markets, the change being made on Thursday from 20 to 15 per cent., the latter now being the ruling quotation. Solder, on the other hand, is no stronger, quotations being about as they were a week ago.

In pipe and fittings conditions are unchanged, with some talk of price cutting on various lines, particularly on malleable fittings, an extra 10 per cent. being said to be given by some supply men. The cut is by no means general and it is probably little more than talk.

Buying of all classes of plumbing supplies is very lively and no let-up is expected until October. Heating goods are moving satisfactorily, although this is, of course, not a rush season.

LEAD PIPE—The looked for advance has been made and we now quote 5 per cent. lower. We quote: Lead pipe, 8c., discount 15 per cent.

SOIL PIPE AND FITTINGS — Our quotations are as follows: Medium and extra heavy pipe and fittings, 60 per cent.; 7 and 8 inch pipe, 40 and 5 per cent.

IRON PIPE — A steady business is being done. We quote as follows: Black, 1 in. pipe, $4.37; galvanized, 1 in. pipe, $6.02. See current market quotations for other sizes.

IRON PIPE FITTINGS — We quote as follows: Cast iron elbows, tees, crosses, etc., 67½ per cent.; cast iron plugs and bushings, 67½ per cent.; flange unions, 65 per cent.; nipples, 75 and 5 per cent.; iron cocks, 60 per cent.; Canadian malleable, 35 per cent.; American malleable, 25 per cent.; malleable unions, 65 per cent.; malleable bushings and plugs, 60 and 10 per cent.; C. I. ceiling plates, plain or N. P., 70 per cent.; C. I. floor, 80 per cent.; hook-plates, 65 per cent.; expansion plates, 65 per cent.; headers or branch tees, 65½ per cent.; ring hangers, black or galvanized, 70 per cent., American list.

GALVANIZED IRON RANGE BOILERS—We quote: 12 gallon capacity, standard, $4.50; extra heavy, $6.50; 18 gallon, standard, $4.75; extra heavy, $6.75; 24 gallon, standard, $4.75; extra heavy, $6.75; 30 gallon, standard, $4.75; extra heavy, $7.50; 35 gallon, standard, $5.75; extra heavy, $8.50; 40 gallon, standard, $6.75; 40 gallon, extra heavy, $9.50; 52 gallon, $11; extra heavy, $14; 66 gallon, standard, $18; extra heavy, $20; 82 gallon, standard, $21; extra heavy, $24; 100 gallon, standard, $29; extra heavy, $34; 120 gallon, standard, $34; extra heavy, $40; 144 gallon, standard, $47; extra heavy, $55. The discount on copper and range boilers continues at 15 per cent.

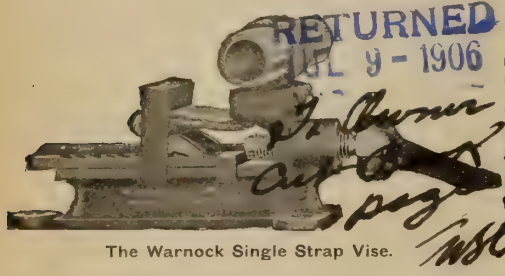
RADIATORS—Business is on the increase and a good season is looked for. We quote: Hot water, 50 and 2½ per cent.; steam, 50 and 5 per cent.; wall radiators, 50 per cent.

SOLDER—Prices are weaker again. We quote: Bar solder, half-and-half, guaranteed, 24c. to 25c.; wiping, 22c.

ENAMELWARE — We quote as follows: Plate E1, 5 feet, first quality, $20.65, special $18.65; plate E11, 5 feet, first quality, $19.15, special $17.15; plate E21, 5 feet, first quality, $19.15, special $17.15; plate E35, 5 feet, first quality, $24.65, special $22.40. Fittings extra.

CANADA BRASS CHANGES.

The Canada Brass & Supply Co., London, have changed their firm name to the Labatt Mfg. Co., and are making other changes in order to better take care of their growing trade. The Toronto office and warerooms are being moved from King and York streets to 367 Queen street west, where the showrooms will be much more conveniently located. Richard Crashley, Toronto manager, reports a steadily growing city trade.



PRESENTATION TO TRAVELER.

An interesting event took place on Saturday morning at the James Morrison Brass Mfg. Co., when James Morrison, president of the company, on behalf of the members of the office and warehouse, presented a gold locket, suitably engraved, to Fred. Armstrong, who is leaving to locate at Calgary. In the course of his remarks Mr. Morrison referred to the high respect in which Mr. Armstrong was held by his fellow associates, and expressed the hope that the memento would serve to cement the many friendships which have grown up around him. Mr. Armstrong very feelingly thanked the staff for their

kindness during the many years he had been with the firm. S. T. Hadley is taking Mr. Armstrong's place on the road and F. Howard has been moved up to Mr. Hadley's position in the sales office.

WARNOCK SINGLE STRAP VISE.

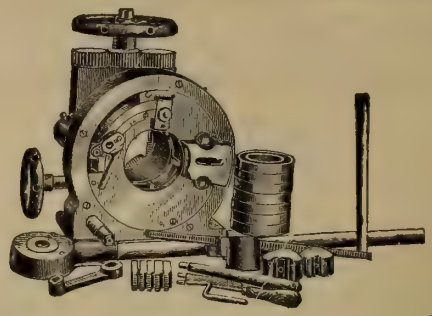
The accompanying illustration shows a new single strap vise designed and manufactured by the Warnock Mfg. Co., of Worcester, Mass. This is a new tool for nickel and polished tubing, being very convenient for polished work. All that is needed to hold the pipe is to thrust it through the loop and draw it down to an adjustment with the pipe. After this the harder you pull the harder the vise holds, as it has the same principle as the Warnock wrench, which hugs the tighter the harder you pull. The manufacturers will forward additional information on request.

The Warnock Single Strap Vise.

Sova & Barbour have opened a plumbing shop at Winnipeg.

SWEATING OF PIPES.

Insulating cold water pipes is frequently done in sections of the country where the water flowing through the pipes is at a comparatively low temperature, the warm air passing over them cooling so quickly as to cause condensation of the moisture in the air. The wet spots under the water pipes are frequently attributed to leaks, but the experienced plumber diagnoses the case as one of sweating. The remedy is to cover the pipes with some kind of nonconducting covering like some of the asbestos productions, protecting the pipes from the warm air.



IT'S PRESIDENT CARRICK NOW.

The Central Supply Association of Ontario met at the King Edward Toronto, on June 27. Deep regret was expressed at the recent death of President A. A. McMichael, and in the ensuing election W. H. Carrick, of the Carrick Foundry Co., was chosen as the new president. The association's offices on Toronto street, Toronto, have been closed.

HYDROCARBON BURNER.

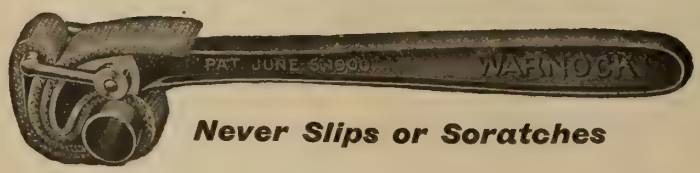
W. Kemp, Tucson, Arizona, has invented an improvement in burners seeking to produce a burner wherein the inflow of air and of liquid or gaseous fluid is regulated independently of each other, to the end that an intense or modified heat may be secured and regulating means are normally under the control of an attendant, such burner involving small expense in installation and repairs. It constitutes a division of a prior application filed by the inventor.

A Certain Sense of Satisfaction

goes with every MERRELL PORTABLE HAND MACHINE, PIPE THREADING and CUTTING MACHINE. We build them that way.

For doing ALL kinds of threading—under ALL conditions—labor trouble and faulty material included—where speed, durability and ease of control count for something, our word to you is to investigate the MERRELL.

Whether it be stationary or portable—hand or power driven—30 DAYS FREE TRIAL must prove conclusively that your choice should be the MERRELL.



This Portable Hand Machine has encased gears, MERRELL standard quick opening and closing die-head, and the latest improved Cutting-off Knife.

Let us tell you more about this machine—The Chasers, Vise and the large range of work covered.

That Peculiar Grate-Bar in the Oxford Boiler.

One thing that makes it easy to convince a man about The Oxford Hot Water Boiler's fuel-saving powers is the peculiar build of its grate-bars.

They're triangular, because that's the shape that gives most strength, stands most abuse and use, and wears out slowest.

They're hollow, because that way they let more air into the fire, and let it in evenly underneath every part of the bed of coals.

And they are driven by cog-gears, so it's easy to shake them, and impossible to jam them or get them clinker-clogged.

And, besides all that, they're fitted in, these Oxford Boiler bars, so that you can take out any one of them for repairs and never touch the others of the set at all.

When you remember that the grate-bar is only one of fourteen selling points about this boiler—

Doesn't it strike you it might pay to hear what kind of a proposition we are ready to make any live dealer who will let us help him sell the best-selling boiler there is on this earth?

Yes, a post card will do to ask questions on. Just address it

It Won't Cost You Anything

to know that Paterson's Wire Edged Ready Roofing is made from Pure Wool Felt saturated with Refined Coal Tar, and the different plies cemented together with the highest grade of Bitumen. Our Roofing contains nothing that will evaporate at less than 300° Fahrenheit, and that's why it lasts so long.

Mr. Hardware Dealer—

You will increase your business handling the

MONTREAL BEAUTY NIGHT LAMP

Used in preference to gas and electric light for halls, bedrooms, bathrooms, cellars, etc. It gives a beautiful soft light, burns coal oil, **costs but ¼c. per night**; one filling will burn 40 hours without odor. Size 4 inches by 6 inches. Retail at 75 cts. Liberal discount to the trade. Correspondence invited. Agents wanted.

L. J. A. SURVEYER,

6 ST. LAWRENCE MAIN ST. MONTREAL

Every Hardwareman Can Sell Them

You see there's nothing in the way! The wooden sifter is a back number and the "so-called" metallic sifter soon will be. The real article, the

METALLIC ASH-SIFTER

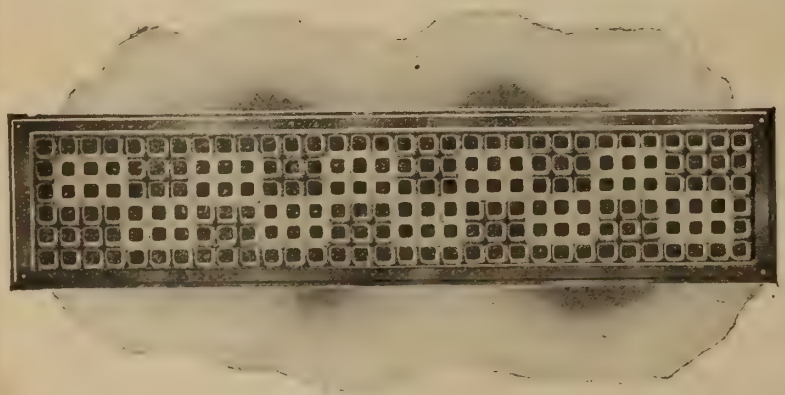
is reasonable in price, "solid" in material, attractive in make-up.

Sifting isn't so bad a job when the **Metallic Ash-sifter** is used. Try one yourself.

SOLE MAKERS

C. M. CUTTS & CO.

TORONTO JCT., ONT.



STAY-ON
Horse Blankets

The difficulty with most Horse Blankets is that no matter how you attach them to the horse, they will work off In the special make of our **STAY-ON BLANKETS** this difficulty is overcome. We have spent labor and money to perfect all kinds of horse clothing, and we are pleased to demonstrate to all the advantages derived from the use of our specialties. You pay no more for our goods than you do for inferior qualities.

OTTAWA, ONT.

American Twin Freezer

Freezes two flavors of Ice Cream or an Ice or Sherbet and Ice Cream at one and same time, in one freezer.

SOMETHING ENTIRELY NEW —NEVER DONE BEFORE.

THE can is divided in two parts by a vertical partition. One flavor is placed in one, the other in opposite side of can, in each of which the scrapers, etc., operate. The can cannot be turned as in old style freezers, because of the partition. It is therefore swung to and fro by a rocking motion of the crank. This is a more comfortable and much easier movement. It is very much less tiresome than turning a crank. One can sit back in a chair with freezer alongside and rock the crank to and fro without discomfort or undue exertion and even read at same time. Although two flavors are frozen at once and with less exertion, no more time is required than in old style freezers.

The **Pails have electric welded wire hoops,** which are guaranteed not to break or fall off; Cans are of heavy tinplate with **drawn steel bottoms** that are guaranteed not to fall out or break and do not leak, the strongest and most durable Freezer Can made; the **Automatic Twin Scrapers** by their positive action insure perfect scraping of frozen particles from side of can. All inside parts are heavily coated with pure block tin, and outside parts all thoroughly galvanized.

SOLD BY LEADING JOBBERS.

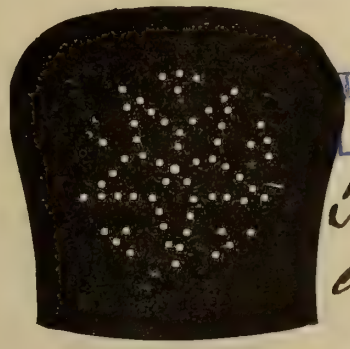
LOCAL
13, 14, 15, 16 inches wide

SQUARE
13, 14, 15, 16 inches wide

CROWN DINING
14, 15, 16 inches wide

Measurements are for extreme width and not for length.



WHY WE DO IT.

Competition is the life of trade, but ***too much competition*** is the death of the retailer. It means cutting down the profit on lines that don't leave you any too good a margin at the best, and that means, if you don't make up on something else, you're liable to go to the wall.

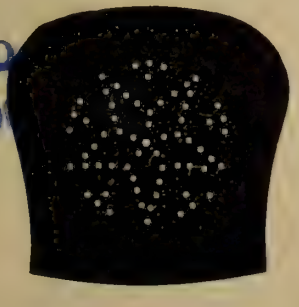
We endeavor every week to draw dealers attention to lines that ***sell well*** and also leave them ***a good profit***. This isn't done from a purely unselfish motive, as we have found out by experience, that it pays us.

When the retailer finds trade brisk, profits large and everything going smoothly, he's a better customer to us, than in hard times.

That's where we make on the deal, and that's why we advertise ***Goods that sell.***

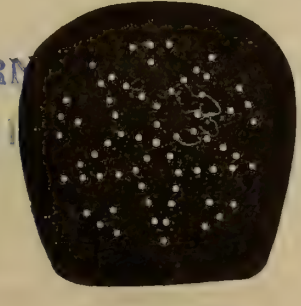
ROCKER SEAT
18 inches wide

SURE SELLERS.



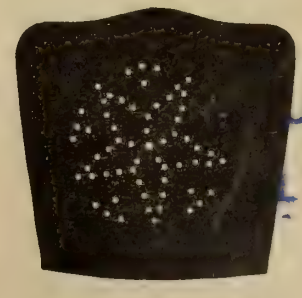
This is a line that you can stock without any fear of having it left on your hands.

Some chair seats are continually getting something poked through them, and wooden ones are always warping out of shape (especially where they are left out on the verandah all night).



People often throw out a good chair, just because they don't know where to get another seat for it.

Get ***Our*** prices and you'll order the goods, then its up to you to let the public know you have them.



Put some in the window or out on the sidewalk—they'll go alright.

BALL TOP

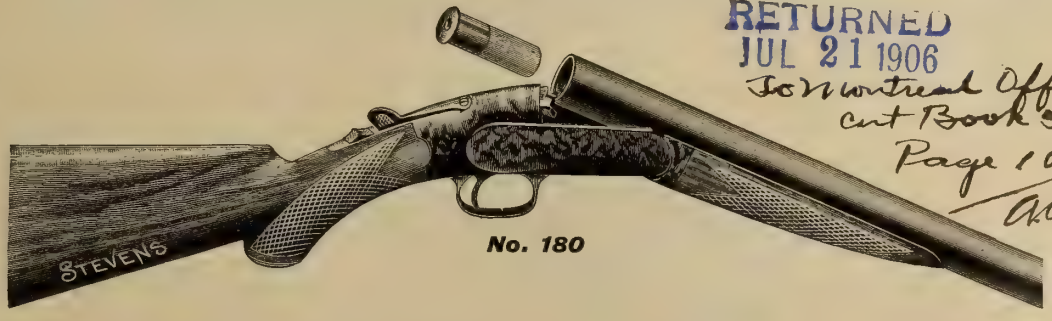
For Beauty, Finish and Quality, the "Maple Leaf" Harvest Tools are Unexcelled

PROMPT DELIVERY GUARANTEED

THE HOBBS HARDWARE CO., LIMITED



LONDON ***TORONTO***

ANNOUNCEMENT

A few weeks ago we took considerable pleasure in telling you about the new loose-leaf catalogue which we expected to send you soon. We have heard many expressions of interest in it and are sure that it is with regret that you will learn of a serious setback to its early issue. Unfortunately, the contractor for the printing was completely burned out a few days ago, and the portion of our catalogue already finished went up in smoke. It will all have to be set up again in type and printed. The delay the fire will cause will, however, not be great, as we have a complete set of copy and have lost but few electros. The work of replacing the destroyed portion has already begun and will be continued with all the energy we know how to put into the work. When completed it will be the best catalogue in the hardware trade.

IN THE MEANTIME

How about your order for guns? It is time you had it placed. Your selection will not be complete unless it contains some Stevens guns. No. 180 is one of the best sellers.

ALUMINUM OIL HEATERS

Sales Over the Million Mark

Smokeless, odorless, safe, light, convenient, economical—a furnace for heat. Radiates like a base burner, from the sides and bottom as well as from the top, heats water, etc. Easily carried from room to room.

Our ***Safety Burner*** is the only one giving complete combustion, only one in which the wick does not enter the oil fount. See the Construction.

A—Flame spreader, free from perforations; clogging up impossible. B—Air space outside of wick tube. C—Air space inside of Wick Tube. D—Wick. E—Outside Casing to Burner. F—Air space between Fount and Outer Casing. G—Fount for oil, entirely separate from Burner; oil fed to wick by small tube. H—Feed pipe conducting oil from Fount to Burner. I—Shield resting on top of Fount, with air space underneath.

The following letter from one of the leading jobbers in the United States to the manufacturers is the strongest evidence of the superior merit of Aluminum Oil Heaters that can possibly be given.

"During the past ten years we have sold over 50,000 Aluminum Oil Heaters and your records will show that we have never returned one for repairs or otherwise." Butler & Johnson, Syracuse, N.Y.

Now, Mr. Dealer, isn't this the Oil Heater for your trade? Don't you want to sell a Heater that you never hear of after it leaves your store except in words of praise? If so you'll buy Aluminum Oil Heaters. We guarantee every one.

Aluminum Oil Heaters "never come back for repairs or otherwise," because they are made right—made to satisfy—made to last—and meet expectations every time.

Aluminum Oil Heaters sell at sight and stay sold. There's money in that fact for you.

You won't have to send a man out to clean or re-wick the Aluminum Oil Heater. You won't have to waste time, temper and money trying to explain intricate instructions, and in making excuses for smoke and smell. There's no trouble with the Aluminum Oil Heaters—they are simply perfect—any child can operate them.

Sell Aluminum Oil Heaters—be a leader. We make the prices that bring you smiles. A postal to us will bring full information by return mail.

Home Office and Factory—Indianapolis.

Canadian Branch : 56 King St. E., Toronto, Canada.

The Dealer's Reputation depends on the quality of the Goods he sells.

H & R REVOLVERS

Are known around the world for their safety, accuracy, durability, perfect design and general superiority.

Only the most skilled mechanics and only the finest quality of material employed in their manufacture. Every piece is finished to the 1000th part of an inch and fits perfectly. ***No Rattle*** in "H & R" such as a quick shake reveals in other makes.

Every revolver that leaves the factory has passed the most rigid inspection and is guaranteed perfect. Barrel and cylinder drilled from solid piece of finest forged steel; solid steel frame; handsome rubber stock affording good grip.

Noted for smooth action, perfect accuracy and power. Don't experiment with an unreliable make because low price is offered as a tempting bait.

The retail price ranges from $2.50 to $8.00 and each model is the greatest value ever offered for the price. They are the kind that do not come back, but give permanent satisfaction.

Put in a full line and you will be pleased with the results. Your jobber can supply you.

THIRD INSTALMENT

Miss Susie Mills has taken a position in F. K. Tallman's. Mr. Tallman has just got through installing MAXIMUM LIGHT GLASS.

A golden eagle was captured near Arnprior a few days ago. Smart, the energetic hardware and stove dealer, has it mounted in his window along with a MAXIMUM LIGHT GLASS display.

The engagement is announced of Miss A. M. Merrick to Mr. W. N. Cranston. Mr. Cranston is the agent here for MAXIMUM LIGHT GLASS.

About 100 tickets were sold at our station on Thursday for the excursion to Ogdensburg. The only face missing was that of John Stein, our genial hardwareman. He said he had too many MAXIMUM LIGHT GLASS orders to fill to go to the excursion.

H. R. Kelly is home for his summer vacation. He reports MAXIMUM LIGHT GLASS sales larger than ever.

H. Barry has bought the rights for a new tire-tightener. Mr. Barry will be remembered as the man who sold $10,000 worth of MAXIMUM LIGHT GLASS last year.

These are the names that have been made synonymous with the

AEOLIAN VENTILATOR

We are the manufacturers of it and control the patents.

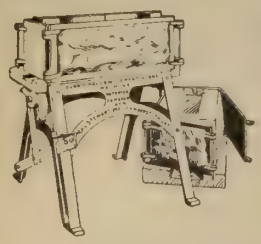
We have placed it on some of the finest buildings in the Dominion.

It is a scientific fact that no modern buildings can afford to neglect sanitation.

We are contractors and sanitary experts. Our ventilator is guaranteed and is placed in position to suit the building as to quality and size.

One Testimony

MONTREAL, June 12th, 1903.
Canadian Pacific Railway Company.
Messrs. J. W. HARRIS Co., LIMITED,
7 St. Elizabeth St., Montreal, Que.



Gentlemen,—Answering yours of June 1st, I am not personally familiar with the merits of the "AEOLIAN" Ventilators but our Assistant Engineer, Mr. F. Crossley, reports that the Ventilators of this type manufactured by you and used by this Company at the Place Viger Hotel, Chateau Frontenac, Windsor Street Station and elsewhere, have proved satisfactory. Yours truly,
E. H. McHENRY, Chief Engineer.

RETAIL MERCHANTS' CONVENTION

Meeting of Ontario Provincial Section at Ottawa—Programme of Business and Pleasure—Complaint Against Telephone Companies—Resolutions Submitted—Freight Rates and Mail Order Business Discussed—Promise of Government Redress—A Fling at Trade Papers.

The convention of the Retail Merchants' Association of Canada, Ontario Provincial Section held at Ottawa on Tuesday, Wednesday and Thursday, July 3, 4 and 5, and reference to which was made in our issue of the 6th inst., was a most successful assembly. Delegates from all parts of the province signed the register, and although the first days' proceedings was attended by but a small number, the arrivals on Wednesday made up a very representative body of retailers.

President's Address.

President A. L. Geen, Belleville, occupied the chair and in his address referred to the splendid growth of the association during the past year, the number of branches in Ontario having grown from 65 to 130, and the increase in Manitoba and Quebec also was most encouraging, due to the excellent work by the general and provincial secretaries and their enthusiastic organizers. The association was still young and it behooved them to go carefully in touching questions of import to the trade—there were many weak spots that good counsel would no doubt strengthen. Unity of purpose was the guiding star of its members, for in unity there was strength, and in time the affairs of the association would be placed on a sound and solid basis. He thanked Mayor Ellis for his pleasant words of welcome, also the Ottawa branch for the entertaining programme provided, and no doubt all delegates would enjoy themselves thoroughly.

Wholesale in Preston.

B. W. Ziemann, Preston, Ont., referred to a wholesale grocery house in Western Ontario which was undertaking to start a retail business in his town, where goods would be sold at wholesale prices to bring the retailers to terms. The grievance on the part of the wholesale firm was that the retailers would not buy from it because it sold at wholesale prices to hotels, boarding houses, etc.

Telephone Companies.

The demands of the Bell Telephone Company were discussed. Delegates complained of the poor service in some cities, and of the merchants being compelled to pay for the telephones six months in advance.

Resolutions.

The following resolutions were proposed and committees appointed for bringing in reports on same. These resolutions were ultimately passed after some strong discussions. As will be noticed, some of the resolutions are of a character which many members deemed outside of the province of the association to touch, and considerable discussion resulted before the same were put through :

"That whereas communications have been received requesting our association to co-operate with all other business associations to settle all questions of international dispute by arbitration, that this association deems it advisable to unite our efforts with the other business bodies as being in the best interests of commerce.

"That whereas a resolution has been forwarded to this board asking us to take up the question of freight rates regarding the transportation of sugar and determine if the freight rates are equitably applied between the various cities and towns of this province, that the chairman appoint a committee to examine into and deal with the matter.

"That whereas a large number of manufacturers place in and upon packages of goods coupons and presents for the purpose of encouraging the sale of their wares, this association request the Manufacturers' Association to take some action towards securing legislation that will stop the sale of goods placed upon the market by such unfair means, and that we pledge our support to the securing of such legislation.

"That the executive of this association be instructed to watch the Dominion legislation now in progress re co-operative associations and take what action they deem advisable to safeguard the interests of retail merchants.

"Whereas great inroads are being made into the retail trade throughout the province by mail order concerns, therefore be it resolved, that the executive committee of the Ontario provincial board take the matter into consideration with a view to finding some remedy.

"That whereas some discussion has arisen through the columns of a few trade journals criticizing the manner in which our association is organized, we believe the criticism is unfair and not in the best interests of the retail trade of the Dominion, and this association again affirms the general plan of the organization as being in the best interests of the retail trade.

"That it is the opinion of this convention that some action should be taken to regulate the manner in which telephone companies conduct their business with retail merchants, and we advise that the executive officers deal with the matter.

"That it is the opinion of this convention that it should be made compulsory that all claims for loss sustained on goods going by express or freight be adjusted within thirty days from the date of claim, and that the matter be referred to the Dominion board to be dealt with.

"That it is the opinion of this convention that each local branch should adopt what plan it considers best suited to its needs to provide for the protection of its members from bad pays.

"That this convention considers that it would be more convenient and advantageous if the Municipal Act were amended so that municipal elections would take place on the first of February or the first of March instead of on New Year's Day as at present.

"That whereas a considerable quantity of gold and silver goods are being placed on the market and misrepresented as to quality, this convention strongly urges the passage of the bill now before the Dominion Parliament respecting the proper marking of all gold and silver goods.

"That whereas the present criminal law discriminates against retail and wholesale merchants, and allows labor unions to do what we are not allowed to do, this convention strongly urges the Dominion board of our association to make every effort to have the law changed.

"That whereas the Postmasters' Association of Canada applied to the Dominion Government to give them the right to sell to mail order concerns lists of names of those persons living in their neighborhoods, and whereas the executive of this association protested to the Dominion Government through the Dominion board against the granting of this request and thus prevented it being done, this convention fully endorses the action of the Dominion officers of the association."

Committees on Resolutions.

The committees on these resolutions consisted of :

General business—F. Darnley, A. J. Warnock, A. J. Kerr, C. J. Provost, R. J. Crowder.

Provincial affairs—M. Moyer, H. H. Mackler, Henry Watters, B. W. Ziemann.

Dominion affairs—F. W. Forde, J. A. McManus, H. C. Ellis and G. W. Shouldis.

Secretary's Report.

E. M. Trowern, general secretary, read his report at the meeting on Wednesday, and same was the most satisfactory in the ten years' history of the association. There were now 135 branches and 2,555 members, not including Toronto, in Ontario alone. The Northwest Association had grown to a marvellous extent, and the Quebec division had grown similarly.

He referred to the amendment which had been made to the Transient Traders' Act. The Act as it now stands is very satisfactory, any by-laws can be passed by city, town, township or village councils to prevent transient traders of all kinds from selling without a license. He fully outlined the amendments and pointed out what had been gained.

The association had considered the proposal to form a fire insurance fund of its own, but had decided that it would be better to insure in an outside well managed and strong company.

It opposed the motion brought up in the Legislature by which the business tax at present in force would be charged to a personal tax on all the merchants' stock whether paid for or not. The motion was not pressed.

At the recent session of the Legis-

lature a bill was brought up to prevent merchants from having signs projecting on the street, and even signs on the buildings. The association aided in having this bill defeated.

E. R. Fisher of Ottawa spoke of men who came into that city from Toronto, take orders for all kinds of clothing, pay no taxes, and are under no expense except hotel expenses. He maintained that this should be stopped. ...

Mr. Ziemann spoke along similar lines. In the small cities agents came in from larger cities and took orders. In large cities agents come in from London and Glasgow.

Mr. Trowern said that the law regarding transient traders, just passed by the Provincial House, would cover that. A by-law can now be passed by the city council preventing this practice.

Treasurer's Report.

F. C. Higgins, treasurer, brought in his report, as follows :

Membership fees collected by Mr. Eadie, organizer, were $2,600; fees collected by Mr. Brubacher, $2,500; fees collected by Toronto branch, $744. Total receipts, $5,844.

The expenses were : For Mr. Eadie's salary and expenses, $1,305; for Mr. Brubacher's salary and expenses, $1,250 ; and for expenses in Toronto branch, $367; refund to branches, $1,277.07; head office expenses, $1,644.50. There was no balance and no obligations. There had been no special calls on the merchants. The report was only for 11 months and therefore the receipts were much less than they otherwise would have been.

No Auditing.

The treasurer's report, while in the main satisfactory, led to some criticism on part of the members. It appears that no proper audit had been made, the expenses of the various organizers having been vouched for by themselves. This did not appear to be on business lines, and Messrs. Forde, of Ottawa, and C. W. Kelly, of Guelph, in referring to this procedure, considered that as this was a business association it should be conducted on business lines. A result of the discussion was the appointment, under motion of H. C. Ellis and R. H. Crowder, of a special finance committee, consisting of Messrs. Higgins, Kelly, Forde, Crowder and Secretary Trowern.

Manufacturers' Prizes.

The resolution against the manufacturers placing prizes, coupons and other enticements in packages of their goods was discussed. A cereal manufacturer, it was claimed, placed painted dolls, painted toys with hair and other adornment in the cereal without wrapping them up, and therefore injured the cereals. The association was strongly opposed to business being done in this way.

Mr. Trowern said he believed that if the retailers took action the manufacturers would move in the desired direction. He said that the retailers did not wish to appear to be making demands. They stood in the same position regarding the amendment of the criminal code. It was decided to authorize the executive to discuss the question with the manufacturers.

The resolution calling attention to the effort to have a bill put through Parliament to authorize the formation of co-operative associations in this country was left to the executive to watch the advances and inquire into the plans of the promoters.

The resolution pointing out the inroads being made on the retail trade by the mail order concerns brought forth the argument that the mail order business should be taxed, as these firms sold over the country where they paid no taxes and competed against merchants who paid heavy taxes. The order business was like the peddling trade and should be likewise taxed. The resolution was left to the provincial executive.

Trade Journals Criticised.

The criticisms of some trade journals in which they advised other associations to be formed separate from the general association brought forth much discussion. The speakers severely criticized the statements of these journals.

"You can't place your hand on a trade journal that ever helped an organization," said Mr. Trowern. "The history of every trade journal has been downward. I don't condemn the trade journals, we should take them, but let them keep their fingers out of the organization work. Association work is difficult enough without having journals, trade journals, putting difficulties in our way."

A resolution was passed confirming the general plan of the organization of the association as being in the best interests of the retail trade.

The resolution on trade journals was one that provoked considerable discussion, and many members felt that this was a question in which the association was not interested, or, if interested, it should be in support of trade journals, and the secretary himself advised members to subscribe to same. What he condemned was the apparent interest of certain trade journals, notably The Canadian Grocer, and Hardware and Metal, in advocating the formation of trade associations separate from the general retail merchants' association.

Who Owns the Journal.

It was whispered by several members that if that was the rule desired by the association it would be as well for the Retail Merchants' Association to stop printing a trade journal, not one cent of revenue from which was recorded in the treasurer's report

It was felt by a number of the delegates that the Retail Merchants' Journal was rather a hindrance than otherwise. As the representative from Wingham expressed it, they had forty-six members in that branch, and not a member, nor he, as president, had received a copy in four months. Others spoke of similar cases.

W. H. Seyler, of the MacLean Publishing Co., publishers of The Canadian Grocer and Hardware and Metal, who was present, was accorded the privilege of a few remarks, and in plain words clearly demonstrated that nothing that had ever appeared in the columns of these papers could be deliberately construed as being inimical to the good objects of legislation and improvement of trade conditions attempted by the retailers. Rather could it be said that it is now, and always has been, the policy of these papers, and all other genuine trade papers, to improve the conditions of the individual branches constituting the general body of retailers. No body of varied trades was stronger than its weakest link, and by strengthening the separate links the Retail Merchants' Association could only gain benefit. Criticism of any organization was the right and duty of every journal and, as Mr. Impey, Toronto, expressed it, "Surely the Retail Merchants' Association in its conduct of affairs should not consider itself above criticism—rather should it invite it." Neither the MacLean Publishing Co. nor any other legitimate trade journal would forego its rights to criticize, and, if necessary, condemn anything not considered in the best interests of individual branches of trade, or trade generally.

Resolution Not Well Received.

After Mr. Trowern, the secretary, had explained, according to his light, the intent of the editorial in The Canadian Grocer of June 29th, "Grocers Should Organize," and intimated that not a member of the staff of the MacLean Publishing Co. had any knowledge of trade from actual experience, or ever sold a dollar's worth of goods, etc., the resolution passed, many members refraining from voting, knowing, as they did, that the member of the MacLean Co. present had sold over a million dollars' worth of groceries, and had a trade experience compared to which the mover's was a peanut stand affair. As admitted to the reporter by a number of the most prominent members of the association at the close of the session, the resolution was considered by them as one that should not have been forced through.

Election of Officers.

The election of officers for the ensuing year was held and resulted as follows :

H. C. Ellis, of Ottawa, former first vice-president, was unanimously elected president of the Provincial Retail Merchants' Association.

First vice-president, B. W. Ziemann, Preston.

Second vice-president, F. C. Higgins, Toronto.

Treasurer, M. Moyer, Toronto.

Provincial secretary, E. M. Trowern, Toronto.

Auditor, C. W. Kelly, Guelph.

Decision as to the next place of meeting will be left in the hands of the executive. The time was also left with that body.

Interviews Government.

At ten o'clock, July 5th, the members of the association marched in a body to the Parliament Buildings, where they were joined by the Montreal delegates, who had come over by special train to the number of 120. Sir Wilfrid Laurier, Premier ; Hon. A. B. Aylesworth, Minister of Justice, and Hon. Wm. Patterson, Minister of Customs, received the delegation in the Railway Committee Room. A. L. Geen, president; E. M. Trowern, general secretary; J. A. Beaudry, secretary for the Province of Quebec, and Henry Watters, president of the Ottawa branch, addressed the Government on

section 520 of the Criminal Code. The anomalous position in which merchants are placed by certain clauses in this section (which is reproduced herewith) was very clearly set forth by the different speakers, that of Mr. Trowern being particularly lucid and emphatic. Several questions were asked by the Premier and his colleagues, and the Premier, in dismissing the delegation, agreed to give the matter the closest consideration by himself and the Hon. Minister of Justice. It was too late now to promise immediate action, as the House was in its closing days, but he would arrange for a further consideration with the committee of the association shortly after the prorogation of the House. It is expected that an interesting and fuller explanation will be made by the committee appointed to this meeting.

Section 520 of Criminal Code, with Desired Amendments.

The words in black are the amendments desired.

"520. Every one is guilty of an indictable offence and liable to a penalty not exceeding four thousand dollars and not less than two hundred dollars, or two years' imprisonment, or if a corporation, is liable to a penalty not exceeding ten thousand dollars and not less than one thousand dollars who **unlawfully** conspires, combines, agrees or arranges with any other person, or with any railway, steamship, steamboat, or transportation company.

"(a) To unduly limit the facilities for transporting, producing, manufacturing, supplying, storing or dealing in any article or commodity which may be a subject of trade or commerce, or

"(b) To **unduly** restrain or injure trade or commerce in relation to any such article or commodity; or

"(c) To unduly prevent, limit or lessen the manufacture or production of any such article or commodity, or to unreasonably enhance the prices thereof; or

"(d) To unduly prevent or lessen competition in the production, manufacture, purchase, barter, sale, transportation or supply of any such article or commodity, or in the price of insurance upon persons or property.

"2. Nothing in this section shall be construed to apply to combinations of workmen or employes, for their own reasonable protection as such workmen or employes or **to wholesale or retail merchants for their own reasonable protection as such wholesale and retail merchants.**

No prosecution shall be commenced under the above section 520, without the fiat of the Attorney General for the province in which the charge is laid.

List of Delegates.

M. Moyer, F. C. Higgins, John Impey, E. M. Trowern, Toronto; James McManus, St. Thomas; A. L. Geen, Belleville; S. A. Brubacher, Berlin; J. R. O'Neill, Lindsay; John Horsley, Meaford; F. G. Lockett, Kingston; A. A. Armstrong, Fergus; W. J. Kerrocher, F. L. Hall, Perth; J. H. Flury, Lindsay; J. W. Shaw, Tweed; W. E. Mayhew, W. Jenkins, Carleton Place; Jas. Eadie, W. H. The Mineral Range Iron Co., which operates magnetic iron ore mines near Bancroft, Hastings County, has received large orders from American iron manufacturers. It is constructing a five-mile spur from the Central Ontario Railway to its mines to facilitate shipments.

CANADIAN HARDWARE STORES

No. 5.

The store of C. E. Noble, Dundalk, Ont., shown in the accompanying engraving, has merit for its neat appearance in spite of the heavy stock of seasonable goods carried on the floor. When binder twine is moving cooking ranges and even oil and gasoline stoves are necessarily pushed into the background. Plenty of open floor space is available, however, for serving customers or in the display of goods. The metal ceilings, shelf boxes, tinware shelves, etc., all present an orderly appearance, the ceiling being kept free of the badly appearing goods too often hung over the customers' heads. Hammocks, of course, can be best displayed from the ceiling, while whips are also a convenient line for this method of display.

CANADIAN HARDWARE STORES, No. 5.—C. E. Noble, Dundalk, Ont.

The photograph does not show the store to the best advantage on account of the great depth of the building, but the varied stock shown, from kitchen sinks to bird cages, indicates the enterprise of Mr. Noble in getting after all branches of trade that can legitimately be considered a hardwareman's line.

SATISFACTORY YEAR'S RECORD.

The Algoma Steel Rail Mills of the Lake Superior Corporation have completed their first year of continuous operation, its total output being 162,000 tons of rails, an average of 13,500 tons per month. The rails brought an average price of $33 per ton, the total being $5,300,000. The output in June was 15,500 tons.

The James Morrison Brass Mfg. Co's employes hold their 18th annual excursion and games at Queen Victoria Park, Niagara Falls, on Saturday, July 14.

RETAIL HARDWARE ASSOCIATION NEWS

Official news of the Ontario and Western Canada Associations will be published in this department. All correspondence regarding association matters should be sent to the secretaries. If for publication send to the Editor of Hardware and Metal, Toronto.

Officers Retail Hardware and Stove Dealers' Association of Western Canada:

President—A. J. Falconer, Deloraine.
First Vice-President—J. B Curran, Brandon.
Second Vice-President—W. M. Gordon, Winnipeg.
Secretary-Treasurer—J. E. McRobie, Winnipeg.

Executive—Alberta, A. E. Clements, Olds; C. F. Comey, Calgary; A. R. Auger, Okotoks.

Manitoba—H. S. Price, Boissevain; A. P. Macdonald, Winnipeg; O. Gilmer. Winnipeg.

Saskatchewan—G. K. Smith, Moose Jaw; S. A. Clark, Saskatoon; J. R. Fox, Weyburn.

Officers Western Board (elected by general merchants and hardwaremen in joint session): President, W. G. McLaren, Souris, Man.; vice-president, G. K. Smith, Moose Jaw, Sask.; H. C. Hamelin, Winnipeg, Man.; secretary, W. A. Coulson, Winnipeg, Man.; treasurer, J. E. McRobie, Winnipeg, Man.; auditor, J. A. Lindsay, Winnipeg. Man.
Association offices, 53 Scott building, Main street, Winnipeg.

Officers Ontario Retail Hardware and Stove Dealers' Association:

President—A. W. Humphries, Parkhill.
1st Vice-President—W. G. Scott, Mount Forest.
2nd Vice-President—J. R. Hambly, Barrie.
Treasurer—John Caslor, Toronto.
Secretary—Weston Wrigley, 10 Front St. East, Toronto.

Executive Committee—The officers and J. W. Peart, St. Mary's; M. R. Marshall, Dunnville; D. Brocklebank, Arthur; F. W. Jeffery, Midland; E. P. Paulin, Goderich, and Frank Taylor, Carleton Place.
Auditors—J. W. Peacock and C. F. Moorhouse, Toronto.

COMING EVENTS.

Convention of Retail Hardware and Stove Dealers' Association of Western Canada, in Winnipeg, July 25.

Convention of Retail Merchants of Western Canada in Winnipeg, July 26 and 27.

Convention of Ontario Retail Hardware and Stove Dealers' Association, in Toronto, on Sept. 4 and 5.

COLLECTION OF DEBTS.

Some action should be taken to assist members in their collections, and also to protect members from debtors who, after due request, fail to settle accounts with the members.

Every town should have a protective arrangement between merchants, whereby each report to a central secretary the names of all such delinquents, the secretary to provide all other parties to the arrangement with monthly amended lists. Whether from a natural dislike upon the part of one merchant to confess to others that he has been "done," or from other causes, such an arrangement seems to be a hard one to make locally. This association can at least furnish a measure of protection to its members through a similar arrangement.

To any one who has had an experience with collections, one thing will be forced upon him, and that is that when all ordinary means fail, a little pressure from "somewhere outside" very frequently brings settlement. The writer recalls a case where a friend had a small account against a party who utterly ignored all requests for payment. Finally he made out a notice purporting to be from the "Quinsigamond Merchantile A[illegible] of New York, threatening legal proceedings unless settlement was made forthwith. Result: payment next day.

What this association might do is this: Supply members with say 25 of the forms which are marked No. 1, and say 15 of No. 2, with 40 envelopes for enclosure. These could be sent out by the merchant himself. The result would probably surprise him. Also supply about 15 of form No. 3 for advising names of delinquents who move from one town to another, leaving debts behind. This would protect members from the professional beat. To cover cost of stationery each member using forms could be taxed 50c. per outfit as above, which amount they would willing pay when the result was seen.

This might be followed up by the association engaging reliable solicitors in each town, who would undertake collections at 10 per cent.—no collection, no pay. This would, perhaps, add to the solicitor's business otherwise.

These suggestions are thrown out by a member of the executive committee of the Ontario Association as a basis for a scheme which can no doubt be improved upon by obtaining suggestions from other members, and such suggestions should be made through columns of Hardware and Metal.

Ontario Retail Hardware
AND
Stove Dealers' Association

.....190...

To the Secretary,
Toronto.

DEAR SIR.—

Mr.....
has moved to .....
leaving an unpaid account with us amounting to $..... Please advise members at above point in order to protect them.

Yours Truly,
.....
Member O.R.H. and .D. Ass'n.

MEMBERSHIP GROWING.

The past fortnight has seen quite an increase in the membership of the Ontario Association. Circular letters have been sent to all in the trade, and if any have been overlooked they are requested to forward their names to the secretary, as the matter written about is important to the trade. Dealers who have not yet joined should back up the executive by sending in their membership at once.

STOVE GRIEVANCES.

The arrangement of the meeting of representatives of the Wholesale and Retail Hardware Associations, to be held on Tuesday, Sept. 4, during the coming Ontario convention, provides an opportunity for discussing any grievances which may be submitted to the executive committee of the association in time for action.

If there is any necessity of arranging a similar meeting with the Stove Manufacturers' Association, the executive committee will do so. Members having matter to bring before the committee should do so at once, if action is desired at the coming convention.

OUR LONDON (ENGLAND) LETTER

From Our Staff Correspondent.

June 27, 1906.

May, with the best part of June, has slipped away into the past, leaving behind a record of continued prosperity for British trade. The hardware and allied trades have expanded, except in some few departments, in proportion. There has been nothing phenomenal — only the steady, constant growth that has been characteristic of the last few months. Total exports of corrugated and galvanized sheets, according to Blue Book statements, slightly increased during the first five months of this year, when compared with 1905, although Canada did not purchase in such large quantities. Total exports of wire manufactures, steel goods, cast pipes and fittings, steel bars and rods, screws, bolts, nuts and hollow-ware were all exported on a larger scale during May of this year than in the same month of 1905. Exports of cutlery from Britain valued £59,483, which is a slight decrease when compared to May, 1905. The whole five months of 1906, however, reveal an increase over the same period of 1905 of some £2,000. Cutlery exports to Canada increased £101. Of pig iron, the Dominion has been buying in larger quantities the whole year, the increase during the past five months being 4,850 tons. Tin plate exports have fallen off in almost every direction, Canada, in particular, having bought only 1,311 in May of this year as compared with 3,000 in 1905.

From everywhere, except Staffordshire, reports announce steady business in the iron and steel industries. Quite recently an inquiry was made for steel rails for Canada, but there is very little chance, indeed, of the order eventually being placed with any concern on this side. Freight and the Canadian tariff bar the way.

Improvement at Birmingham.

In and about Birmingham improvement is noticeable. That may not be saying very much; but it is something. Hardware manufacturers say they are busier, and the engineering and iron foundry people have plenty on hand. Skilled labor is scarce. While it cannot be said that the home demand for edge tools is very brisk at the moment, the export business is flourishing, and hopes are entertained that the domestic trade will improve. Jospeh Allen & Sons, the Sheffield cutlery people, have succeeded in securing the War Office contract for 65,000 of the 80,000 razors required for army purposes. Tenders for table cutlery for army purposes are also invited, a fact which will no doubt help things forward in Sheffield a little. This talk of table knives reminds one that an authority on ivory has been asking where all the ivory supplies come from. It is said that London and Antwerp alone take 1,000 tons of ivory each year, and as this amount is in itself more than was ever taken by big game hunters and natives in one year, it is suggested that the natives of Africa have stores somewhere in reserve. Canada has been a good buyer of machine-made cutlery recently.

Scottish tube manufacturers have to contend not only with very severe competition from competitors in the States and in Germany, but also from a suicidal policy of price cutting at home. Quotations are being lowered until profits are almost at vanishing point, and orders are being accepted at almost any price.

Welsh Tin Plate Industry.

The tin plate industry of Wales seems to be going from bad to worse, even the most optimistic men having to admit that the outlook is far from bright. It was hoped that, by closing down the mills for a week (there were some who declined to close down at all, however), some improvement might be brought about, but orders have been disappointingly few and stocks are accumulating. Employers have not been successful in inducing their men to accept lower wages, and are shaking their heads over the Chicago affair. It does not seem reasonable that they should be upset over the American tinned meat scandal, however, for good authority states that the American tin plate mills are not affected to any extent, and one may well believe that the consuming public will have sufficient sense to understand that, however disgusting the packing methods may have been, all the free publicity which has been lately given to this matter will have a permanent and beneficial effect in the future.

There seems to be some chance of a revival in the Cornish tin mines. As is well known, these mines were rendered unprofitable by the discovery of new mines in Malacca and elsewhere, but now that a shortage of tin has become apparent and prices have gone up to 112s. and more a ton, it has occurred to some that this is an opportunity to open the Cornish mines once more. This is not the place to go into details. Under certain circumstances, no doubt, some of the mines could be worked at a profit, but it may safely be said that in most cases money invested in Cornish mines is likely to be money wasted. Meanwhile, the daily papers speak of Cornwall as a source of untold wealth.

The Anglo-Canadian Co., of Montreal, have been creating a mild sensation over here by inquiring for huge quantities of basic pig iron for their intended works in Canada for the manufacture of steel. Their terms, however, are such as to make the chances of an arrangement being made very small.

Labor Troubles.

Fortunately, for all concerned, the threatened strikes in the shin-building centres of Scotland were averted by means of arbitration, and this industry continues on a firm basis.

But abroad, apparently, relations between master and men are not so happy. Labor troubles continue to disturb the manufacturing centres of Germany, Austria and France. The German Hardware and Metal Manufacturers' Federation are carrying things with a high hand, and strikes in many of the chief towns have resulted, but masters are firm, and in all probability the men will have to give way. In Austria two of the largest works have been closed down and some 17,000 men locked out, while in France—that centre of political, religious and social disturbance—labor troubles are becoming very threatening, and the strike movement is assuming such proportions that French employers have found it advisable to form a union for their defence in case of necessity. This union embraces the engineering, hardware and motor car manufacturers. Every member will subscribe to the annual fund a sum equal to 2 per cent. of the amount paid in wages, and it is estimated that the union fighting fund will thus reach a sum of about £250,000.

Here in Britain, according to the Labor Gazette, very little change has come over the state of employment during the past few weeks. The engineering, tin plate and building trades show a slight improvement in the matter of labor, while the coal mining, iron and steel and ship building industries have not been quite so satisfactory. In the 271 trade unions making returns, with an aggregate membership of 590,919 persons, 21,080 (or 3.6 per cent.) were reported out of work at the end of May, 1906. At the end of May, 1905, the percentage was 5.1. When reading these figures, it would not be out of place to ponder on the following lines, which have been taken from a correspondent of a contemporary. The writer, speaking of the British hardware trade, asks, "Does the army of British hardwaremen work under conditions equally favorable and encouraging as those existing in Canada or U.S.A.? If so, are the salesmen of my acquaintance who are saving some £3 weekly in the States, and who could not earn £2 at home (i.e., in Britain) merely exceptions?"

Honesty in Trade Required.

The action of the Cutlers' Co., of Sheffield, against the Ontario Silver Co., has been duly reported in all the trade journals of this side, one of which calls attention "to the notable apathy which has been displayed by the Canadian authorities in taking action after ample evidence had been laid before them that fraudulently stamped cutlery was being manufactured in their country.....Canada is aspiring to be a great manufacturing community, and its administrators should realize that no permanent success can be achieved in this direction except on foundations of integrity and equal justice." That shot might be re-cast and fired back in the shape of a retort about the adulteration of Canadian butter on the British market, and the delay in applying remedy, but this is not the place. It certainly is a great pity, however, that British manufacturers should have cause to complain of the unscrupulous conduct of any Canadian concern or person. It cannot fail to leave a bad impression and do harm to honorable houses, and cause suspicion. Not very long back, firms connected with the hardware and allied trades here were swindled by dozens by the unscrupulous and false statements of a Canadian, acting on behalf of a certain valueless Canadian publication. This sort of

thing continued for a long while, until, his dupes being put on their guard (and some on his trail), he found it wiser to leave the Old Country for Carlsbad, to take the waters, as he declared.

Right here it might be mentioned that not a few British manufacturers and shippers are loud in their complaints about the unsatisfactory solvency laws of Canada. They have no protection in their business relations with Canadians.

Proposed Census of Production.

An interesting proposal has been put forward by the president of the board of trade that a census of production of Great Britain be made. While it is possible to obtain minute (if, to the ordinary individual, very deceptive), statistics of imports and exports, it is impossible to gather reliable information as to the state of home production. This fact has been very noticeable in the recent fiscal debates. Now, however, it is proposed that in 1908 a census be taken of the output and production of all British manufacturers. Particulars will be required as to the nature of the business, the output, the materials used, the days and hours of work, the persons employed, the wages of the employed, plant and machinery used, and similar questions. The census may be either quinquennial or biennial, and all information supplied by manufacturers will be treated as confidential.

As a result of the recent Postal Congress at Rome, the postmaster-general has announced some important modifications in the rates of foreign and colonial postage. Most of the alterations will come into force next year, but the reduction on foreign and colonial money orders, not exceeding £1, from 4d to 3d, will begin on July 1. It will be possible to carry letters to the colonies at the rate of a penny per ounce instead of at a penny per half-ounce, as formerly. It is proposed to enlarge the class of commercial and business documents, which are allowed to pass through the post at ½d, as far as practical, to all purely formal documents, excluding anything in the nature of a personal letter.

TORONTO MERCHANTS COMPLAINING.

Toronto retailers are complaining of the way certain jobbers and semi-jobbers are selling direct to the consumer and the following is an extract from a letter received from a prominent Toronto hardware merchant:

"A man building a house does not have to go to these jobbers, but as soon as a permit to build is issued a traveler calls on him and offers to supply the goods at the same price they are sold to the retailer, and in many cases, if the order is large, will supply the goods at even a closer price than they sell to the retailers. I have no objection to jobbers selling retail so long as they sell at about the same price we do, but when they sell to the consumer as low or even lower than they sell to us, it's time for a kick. Not only myself but others would like to see this matter taken up by the hardware association."

HARDWARE TRADE GOSSIP

Quebec.

A. Terriault, plumber, Montreal, has assigned.

J. A. Wright, of Sorel, paid a business visit to Montreal recently.

L. N. & J. E. Noiseux have been registered as hardware merchants at Montreal.

A. Sweet, general merchant, of Winchester, Ont., visited Montreal a few days ago.

T. A. Mercier, general merchant, of L'Epiphanie, was in Montreal on a buying expedition this week.

J. H. Bell, hardware merchant, of Mattawa, Ont., was a caller upon the Montreal jobbers this week.

George Hodgins, of East Clifton, has disposed of his general store to Mr. Lowrey, of the same place.

J. A. Paquin, general merchant, of St. Eustache, came to Montreal a few days ago to purchase goods.

T. H. Jordan, of A. C. Leslie & Co., Montreal, has returned from a business trip in the Maritime Provinces.

James Thompson, crockery and tinware dealer, of Sherbrooke, paid Montreal wholesalers a visit this week.

J. M. Cote, general merchant, of St. Bruno, paid a visit to Montreal this week, in connection with his business.

Mr. Bissonette, of Bissonette & Freres, general merchants, St. Sebastien, was in Montreal a few days ago.

H. L. Holstein, general merchant, of Whitney, Ont., was among the out-of-town buyers in Montreal this week. Mr. Holstein was purchasing stock for a new store he is opening at Barry's Bay.

Mr. Kempthorn, of Oliver & Kempthorn, furniture and hardware dealers, Saskatoon, Sask., was in Montreal this week accompanied by A. E. Young, of the same place. Like all those who "come out of the west," Mr. Kempthorn speaks with enthusiasm of the future awaiting Canada's new provinces. On his return from Montreal Mr. Kempthorn will visit Ottawa and Toronto.

The Canadian Rubber Co., of Montreal, Limited, have just concluded a deal whereby they obtain exclusive control of rubber advertising in all street cars owned and operated in the principal towns and cities in Canada. This progressive Canadian company are at present running their attractive cards in street cars, advertising their Keystone side wire tire, and also calling attention to their general facilities for manufacturing tires for any class of work.

Ontario.

W. B. Clifton, Alliston, was a hardware buyer in Toronto this week.

John Bailes, of J. Bailes & Son, Oshawa, was a visitor in Toronto during the week.

H. B. Morley, Winnipeg representative of Kemp Manufacturing Co., spent a few days in Toronto last week.

Charles Morrison, of the James Morrison Brass Manufacturing Co., Toronto, is on a holiday trip to Chicago.

Geo. R. Plumb, hardware merchant, 169 McCaul street, Toronto, has purchased larger premises at 171 McCaul street for his growing business.

Fred G. McBrien, Toronto, will shortly remove his hardware store from Dovercourt road to larger premises on Bloor street, just west of Dovercourt.

W. G. Pow, until recently head salesman for W. R. Hobbs, Tillsonburg, is now a member of the traveling staff of the Hobbs Manufacturing Co., London.

G. M. Binns, Halifax, Maritime Provinces representative of the Kemp Manufacturing Co., is on a western trip and will visit Toronto and renew old friendships here.

Lewis Bros.' Ontario traveling staff are on their holidays. Messrs. Morell and Dunn have taken a supply of fishing tackle with them but hope to bring back the "yarn."

H. N. Joy, of the Joy Manufacturing Company, Toronto, is on a business trip through Western Canada and will arrange an exhibit of the Joy malleable range at the Winnipeg Exhibition.

Fred Armstrong, formerly traveler for the James Morrison Brass Manufacturing Co., Toronto, left for Calgary on Tuesday to accept a position as traveler for the Gurney Standard Metal Company.

Toronto hardware and stove dealers are to meet next Tuesday evening at Temperance Hall, Bathurst street, two doors below Queen. "The sale of goods to consumers by jobbers" will be discussed.

John R. Foster, formerly with the James Robertson Co., is now representing the Labatt Mfg. Co. on the road and Lou Martin, of the office staff, has taken Mr. Foster's territory for the Robertson Co.

Fire did between $2,000 and $3,000 damage to the Canadian Corundum Wheel Company's works at Hamilton this week. The drying room caught fire from an unknown cause, and with its contents was destroyed.

Amongst the 28 candidates nominated for the executive committee of 15 members of the Toronto branch of the Canadian Manufacturers' Association, L. L. Anthes, of the Toronto Foundry Company, was one of the successful ones.

C. W. Northcott, accountant for the Winnipeg office of the Ontario Wind Engine & Pump Company, has been spending a few days of his honeymoon with his parents in Toronto. J. C. Northcott, of Rice Lewis & Son, is a brother.

Geo. Jamieson, of H. & G. Jamieson, College and Markham streets, Toronto, who broke his arm several months ago, is on a week's holiday at Port Perry. The fracture is very slow in healing and Mr. Jamieson was forced to go to the hospital a second time.

The hardware store of Robert Fair, Toronto, was burglarized last Sunday, and Acting Detective Childs has arrested three youngsters between the ages of nine and eleven years, who are said to

have obtained an axe and a chisel from a nearby coal yard, forced the back door of the hardware store, and stolen about $15 worth of knives, glass cutters, chisels, etc.

Western Canada.

N. S. Dalgleish has purchased the hardware store of Thomas H. Leeming, Kamloops, B.C.

C. W. Peters, Regina representative of the Canadian Rubber Company, has returned from his trip east.

Wm. Vallance, of Hamilton, is in Winnipeg this week consulting with the management of Geo. D. Wood & Co.

W. G. Jones, of the Pease Foundry Co., Toronto, and C. D. Waldon, of the Pease-Waldon Co., Winnipeg, are in the far west this week on business.

C. W. Northcott, accountant of the Ontario Wind Engine & Pump Company, Winnipeg, was presented with an elaborate silver service, suitably engraved, by the company on the occasion of his recent wedding.

R. R. Kinread, Winnipeg manager of the Record Foundry & Machine Co., returned west this week from Moncton, having successfully accomplished the matrimonial mission which called him east. "Bob" doesn't talk about stoves now.

Maritime Provinces.

H. H. Dryden, Sussex, N.B., has formed an incorporated company to carry on his stove and tinware business.

Elmore Blakeney, of Petitcodiac, N.B., has secured a position on the staff of the Jas. H. Ashdown Hardware Co., of Winnipeg.

IMPORTANT CHANGE AT HAMILTON.

A change in the proprietorship of the F. Hamilton Hardware Company, Hamilton, took place on Monday, when P. H. Alexander assumed possession of the business. Mr. Alexander will conduct the business for at least a time under the old name. For fourteen years Mr. Alexander has been a valued employe of Wood, Vallance & Co., and for five years represented them on the road. Mr. Alexander is very popular with a wide circle of friends, who will join in wishing him every success and a good share of public patronage.

Mr. Hamilton's long illness, as a result of his misfortune in being caught in a railway collision last Fall, has forced him to retire from business for the present, but his many friends will hope to hear of his early recovery and of his undertaking business duties again soon.

WHEN TO QUIT.

An English journal requested a number of its largest advertisers to give their opinions concerning the best time to stop advertising, and the following replies were received :

When the population ceases to multiply and the generations that crowd on after you and never heard of you stop coming on.

When you have convinced everybody whose life will touch yours that you have better goods and lower prices than they can get anywhere else.

When you stop making fortunes right in your sight solely through the direct use of the mighty agent.

SUCCESSFUL JOBBERS AND SALESMEN.

No. 26.

A majority of our readers will easily recognize the likeness of J. H. Roper, which we present herewith, as Mr. Roper has been calling on the trade throughout the country for the past fourteen years.

His earliest experience in the business Mr. Roper obtained with the old firm of McKee & Davidson, Peterborough, now known as the Peterborough Hardware Company. From that place he came to Montreal, entering the service of Benny, McPherson & Co., with whom he remained for about four years. He then, for the first time, came into contact with his present firm, John Shaw & Sons, Wolverhampton, by going on the road for Godfrey S. Pelton, who at that time represented them in Canada. In this capacity Mr. Roper covered the extensive territory between London, Ont., and Halifax, N.S., for nine years. During the next four years he represented Alex. Gibb, of Montreal, and finally, towards the close of 1905, he obtained the Canadian agency for John Shaw & Sons, Wolverhampton.

J. H. ROPER,
Manufacturers' Agent, Montreal.

Mr. Roper has a splendid office and sample room at 82 St. Francois Xavier street, Montreal, where he is showing a complete new line of samples. His firm distributes all kinds of staple hardware goods, cutlery, etc., which have invariably met with the approval of the Canadian trade, during the past half-century. They also do an extensive business in metals and other heavy lines.

In addition to his main agency, Mr. Roper also represents the following firms : The Wilkinson Plough Co. and the Toronto Pressed Steel Co., of Toronto, in the Province of Quebec aod Eastern Canada ; W. C. Crawford, manufacturer of handles, Tilbury, Ont., in the Province of Quebec ; the R. McDougall Co., Galt, Ont., manufacturers of pumps, for Eastern Canada ; the Garton Toy Co., Sheyboygan, Wis., manufacturers of high grade express wagons, sleighs, etc., and the Chicago Curtain Stretcher Co., manufacturers of curtain stretchers, step ladders, etc. Mr. Roper intends confining himself to the jobbing trade only.

IOWA ASSOCIATION QUESTION BOX.

Ques.—Should merchants sell at the same price to everybody or make different prices to different customers?

Ans.—It was the consensus of opinion that only one price should prevail, and the merchants who had followed out this policy found that in the long run they benefited by having their store known as a trading place where only one price prevailed. Another said that he gave a discount of 5 per cent. on cash sales of stoves, etc. but does not extend this to other lines.

* * *

Ques.—Is it more effective to handle and push one brand of goods than to carry several brands?

Ans.—Mr. Eckles said that he had endeavored to put in a line of special brands only and in this way is getting away from competition entirely. He said that he has found this very profitable and intends to expand in this direction.

* * *

Ques.—Has any good come out of your hardware association?

Ans.—This was discussed at length, and the session almost resolved itself into a testimony meeting. In towns where a number of hardware merchants are in business and members of the association it was found that better feeling exists, and that price cutting and other unwise competition has been largely eliminated.

AN EXHAUSTIVE ADVERTISER.

Some "home-made" advertisements are quite amusing when they get into print. Here is the soul-thrilling announcement of an enterprising Nova Scotia merchant just as he keeps it standing in his own town paper :

A. B. FORREST,
Dealer in

JOBBERS SELLING TO CONSUMERS.

One of the greatest evils of the hardware trade in Ontario is the sale of goods to consumers by jobbers and manufacturers. It would be useless to attempt to particularize as while some houses are not as great offenders as others the evil is so general that the houses which would prefer to do a purely jobbing or manufacturing trade are forced to accept retail orders offered them in order to compete with the houses which go out after the consumers' business.

The evil is one which hardware retailers must grapple with at once through their association if the trade is to be saved from utter demoralization. And in endeavoring to remedy the evil the dealers are certain to meet with the hearty support of many jobbers and manufacturers who realize that in entering into back door competition with their customers they are killing the goose that lays their golden egg. From time to time some dealer arises to propose co-operative buying or the establishment of a jobbing house conducted co-operatively by the retailers. These propositions have been shown to be unworkable time and again, but there is no surer way to encourage sentiment in favor of them than by continuing to sell direct to consumers.

That selling in direct competition to retailers is unprofitable to jobbers is illustrated by three incidents happening during the past week.

A Western Ontario merchant wrote that as a plumber in his town sold paints without carrying a stock, merely filling large orders on close margins when customers were secured, the hardware dealers were refusing to buy any goods whatever from the house selling the paints.

In an Eastern Ontario town visited by the editor last week a certain jobbing house cannot, it is said, sell a cent's worth of goods to the hardware dealers. One of their travelers saw a house in course of erection and by direct canvassing made a sale of nails, etc., at prices equally as low as those quoted to regular dealers. The local hardwaremen heard of the sale and when the regular traveler called on them he failed to get his accustomed order, the jobbing house losing the friendship of several retailers in return for a small sale to a builder.

A Toronto dealer was asked to quote prices on a certain line of building goods. The customer came back again with the report that he could buy at wholesale. The dealer verified this and rather than let the jobber beat him out of the business, turned the order, which was from a personal friend, over to a manufacturer.

These incidents are happening every day and will continue to occur until the Retail Hardware Association secures a sufficiently large membership to induce the jobbers and manufacturers to take such action as will remedy the evil. The Retail Hardware Association has an opportunity to do much good work for the trade in general and every dealer should accept the first invitation to join the association. Every member adds to the strength of the organization.

RETAIL MERCHANTS' CONVENTION.

While the list of delegates to the provincial convention of the Retail Merchants' Association in Ottawa fails to show any hardwaremen as taking part, considerable space is devoted in this week's issue to the doings of the delegates of general interest. Many of the resolutions adopted are timely and the suggested amendments to the Criminal Code should meet with the hearty endorsation of the coming conventions of the Retail Hardware Associations in Western Canada and Ontario.

The adoption of a resolution condemning trade newspapers for criticising the organization methods of the paid officials of the Retail Merchants' Association is worthy of note. Are these highly paid officers above criticism? Permanent officers who do not present an audit of the association's books nor present a financial report of a paper which the association are supposed to own are surely open to criticism, and salaried organizers who after several years of alleged effort fail to organize such an important branch of trade as the hardware and stove business—fail even to let hundreds of well-informed hardwaremen know that they desire to organize a hardware section—must be open to criticism whether the permanent officers like it or not.

Hardware and Metal repeats that experience has proven that the hardware trade has gained a dozen or hundred times more through the purely retail hardware associations in the United States and Western Canada than through the Retail Merchants' Association in Ontario and Quebec. And again we invite any reader who thinks differently to discuss the question in these columns.

We agree that the work of organizing a retail association is work which should preferably be undertaken by others than publishers of trade newspapers. But when this work is neglected by men who are being paid to do it, and when there is a crying demand for an organization and retail dealers take up the matter of forming an association themselves, we contend that it is the duty of a trade paper to assist in every possible manner, as the retailers are the backbone of the trade.

Members of the staff of this paper aided in the organization of the Retail Hardware Association of Western Canada two years ago (great credit for which is now claimed by the Retail Merchants' secretary) and in the formation of the Ontario association this Spring. If the permanent officers of the Retail Merchants' Association who are responsible for organization work had been half as energetic in trying to organize the hardware trade in Ontario as they have been in "knocking" the new Retail Hardware Association, the trade would have experienced some tangible results and the existant evils would have been greatly minimized.

But why all this tirade against trade newspapers on the part of certain paid officials of the Retail Merchants' Association? Is it because having been unsuccessful in business and having secured salaried positions they consider their own material interests of greater importance than the welfare of the retail merchants they are supposed to be serving?

Let it be fully understood. Hardware and Metal has never at any time criticised the Retail Merchants' Association as an association. Its aims are commendable, and it has accomplished much that is beneficial to the retail trade of

the country. Neither is it with the elective officers, many of whom, like President Ellis, we number among our warm and fast friends. Our differences are with the permanent paid officials, who have taken umbrage because we have deigned to urge the retailers in the various branches of trade to organize for mutual protection and benefit.

SPLENDID CROP PROSPECTS.

The prosperity of Canada being directly dependent upon her agricultural industry, it is gratifying that reports received from authoritative sources find the crop prospect very satisfactory. Interest in this regard turns primarily to the west, with each year a greater field to be reckoned on. Thousands of acres of rich prairie are being broken by the settler every day, and next season will add their quota to swell the immense grain product. Last year's yield, considered by the acre or as a whole, was wonderful, and if Nature is propitious the crop now in the ground will, by reason of increased acreage, far surpass it. What the influx of people will be during the present Summer it is difficult to estimate, but it will constitute another movement of the entering wedge that is to bring this fair Dominion a population of fifty millions in a few decades, and raise Canada's standard to a high place among the nations of the world.

All this means an agreeable situation to the merchant, providing always that he temper the modus operandi of his business with the precautionary measures suggested by the conditions surrounding him. He may accept the feeling of optimism with which the whole west effervesces, but he must introduce qualifications for present protection before figuring far into the future. He has been, and is, playing an important part in the upbuilding of that vast country in a way that is not necessarily coincident to the ordinary process of trading. He has exerted one of the most powerful influences that have been directed to placing the settler on a good footing, and putting the greatest acreage in seed as soon as possible. To those farmers who have shown the proper industrious disposition he has extended the most liberal credit, thereby permitting the use of an enormous capital in acquiring land and improving it that would otherwise have been held back for current expenses. It is the first year or so, while he gets no returns from the soil, that the settler feels most keenly. The merchant has tided him over that period safely, with the assurance that the first crop—which is generally calculated to set the owner on firm ground, with something to spare—would be followed by a settlement. This policy has been of inestimable benefit, especially to the homesteader, whose capital is small, and who, until the required duties are performed, has no freehold property to secure his paper.

Of course the merchant could not be so indulgent without the aid of the wholesale houses, and with long credit extended all round, the value of accounts outstanding at one time has been enormous. Naturally, harvest should see the books balanced up, but collections in the past have not been satisfactory. The farmer very often succumbed to the land fever—knowing that this is the last Great West, and that prices would never be so low again—and invested money that should have been devoted to settling his bills. Land greed is a hard thing to fight off, and in a new, rich country it is rampant. The screws had to be tightened up a little by the merchant, and now collections are better. They should continue to improve, particularly in those districts where more than one crop has been marketed. The temptation to buy while prices are advancing is great, but the farmer should square his accounts first. He must be urged to do so by every reasonable means. In the districts where prosperity has made its appearance — and in the west it often does very quickly — cash business should be encouraged as far as possible.

The merchant is now buying Fall stock. If the crop comes up to expectations business conditions will be good; if not, the times are likely to be pretty hard. It is not our wish to hold a pair of blue glasses to the merchant's eyes, but merely to emphasize the need that he has for caution. The outlook just now is splendid, and we pray that the brightest hopes may materialize. At the same time, let the possibilities exert their proper moderating influence.

RAILROAD DISCRIMINATION.

The average shipper has long since ceased to evince marked surprise at anything a railroad may do or charge. The workings of the railroad mind are past finding out, or even the elucidation of an A. G. Blair. Still the shipper occasionally runs across such a flagrant example of wrong-headedness as to excite his interest if not his surprise.

Such a case was recently brought to the notice of Hardware and Metal. A large shipper has been accustomed to send quantities of crockery from Hamilton to St. John, N.B., paying 62 cents per hundred pounds. A short time ago he had occasion to send a shipment of the same class of goods to Hamilton, Bermuda, and on his freight bill discovered that the railroad's charge to St. John was 29½ cents, because the goods were going through to Hamilton, Bermuda.

By a little calculation it was seen that he could ship his crockery through St. John a thousand miles out into the Atlantic to Bermuda and back again to St. John for less money than if they were shipped no farther than St. John in the first place. This is charging what the traffic will bear with a vengeance.

THE SITUATION IN METALS.

Although this time of year is usually a slack season for pig iron bookings, some leading Canadian dealers state that they have sold more iron of late than for some time previously. Very fair quantities are moving, some orders for two and three hundred ton lots having been received. There seems to be a general expectation of higher prices, as even at the present time it is extremely difficult to obtain large deliveries from Old Country furnaces.

Tin has not yet become steady. The same unending fluctuations continue as the market condition, though the general tendency seems downward. Prices quoted by the large jobbing interests vary according to specifications, and they even now show a hesitancy to give definite figures. Until tin emerges from the speculative influences which now control the market, any efforts to predict future conditions must be pure guess work.

Still another drop in pig lead has brought quotations on that metal as low as $4.30 to $4.40 per hundred pounds. These figures are thought by some students of market conditions to be slightly weaker than the situation warrants, but they are being freely quoted in Montreal. It seems more than strange that in spite of a declining market in pig lead, both shot and lead pipe have materially risen. This circumstance would seem to be one more indication that the lower prices on pig are the result of manipulation, and that this weakness will not be much longer maintained. There is undoubtedly a big demand for lead. There must, then, be a scarcity among consumers, as otherwise no important buying movements would be noticeable on a falling market.

Another surprise this week is the lowering of prices on zinc spelter by ¼c. per pound. This quite disappointed the expectation of market experts, as it was thought that the keen demand from foreign as well as domestic consumers would still further stiffen quotations. From all appearances higher prices will soon again be in force.

It will be seen that copper and pig iron are the only ingot metals to maintain their strength, while all sheet metals are not only in active inquiry, but are also steadily held at current prices.

MARKETS AND MARKET NOTES

(For detailed prices see Current Market Quotations, page 66.)

THE WEEK'S MARKETS IN BRIEF.

MONTREAL.

Linseed Oil—Has declined 2 cents.
Lead Pipe—Discount of 15 per cent. declared.
Solder—A decline of ½ cent.
Ingot Tin—A further drop in price.
Pig Lead—Five cents lower per hundred pounds.
Ingot Zinc—Prices ¼ cent lower.
Shot—Advanced to net list.
Boxwood Rules—An average advance of 5 per cent.
Planes—Some makers have advanced prices.

TORONTO.

Ingot Tin—Quotations down to 41 cents.
Rules and Planes—American manufacturers are advancing prices.
Linseed Oil—A drop of 1 cent considered likely.

Quebec Hardware Markets.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, July 13, 1906.

Some interesting changes in current prices of hardware lines have taken place within the past few days. One change which caught several jobbers napping was that in shot, which has advanced to net list.

In view of the decidedly sagging market in pig lead, there was little expectation of this fluctuation in shot, among the trade. Some dealers were actually holding off for better prices, but from events which have transpired it seems evident that there was a scarcity of stock among manufacturers. One of the largest jobbing houses, finding that their stock of shot was becoming very light, sent in a large order for quick delivery, and this must have accentuated the scarcity. At any rate, the advance was declared almost immediately afterwards.

Boxwood rules show several changes in price, figures, on the average, being about 5 per cent. higher than previous quotations. Some makes of planes have also slightly increased in price, and all lines are held steady.

Business in general is keeping up remarkably well. In fact, owing to the holiday season being on, some of the Montreal wholesalers are handicapped in their deliveries through having allowed too many of their staffs away on their vacations.

AXES—Trade is satisfactory for the season. Our quotations are as follows: $7.60 to $9.50 per dozen; double bitt axes, $9.50 to $12 a dozen; handled axes, $7.50 to $9.50; Canadian pattern axes, $7.50 a dozen.

HANDLES — We still quote: No. 3, $1.25; No. 2, $1.50; No. 1, $1.90 a doz.; adze handles, 34-inch, $2.20 a dozen; pick handles, No. 2, $1.70; No. 3, $1.50 a dozen.

LANTERNS—Trade conditions are unchanged. Quotations remain the same as at our last report.

RIVETS AND BURRS—The midsummer lull is just beginning to make itself felt. We quote: Best iron, rivets, section, carriage, and wagon box, black rivets, tinned do., copper rivets and tin swede rivets, 60, 10 and 10 per cent.; swede iron burrs are quoted at 60 and 10 and 10 per cent. off new lists; copper rivets with the usual proportion of burrs, 35 per cent. off; and coppered iron rivets and burrs in 5-lb. carton boxes at 60 and 10 and 10 per cent.; copper burrs alone, 30 per cent., subject to usual charge for half-pound boxes.

HAY WIRE—There is now somewhat of a lull after the spirited demand shown a week or so ago. Farmers have now pressed most of the hay remaining in their barns from last year. The present year's crop will soon be ready, however, and the heaviest season for this line will no doubt be on inside of a couple of weeks. Our prices remain as follows: No. 13, $2.45; No. 14, $2.55; No. 15, $2.70; net cash, f.o.b. Montreal.

MACHINE SCREWS — Business is about as usual. Discounts remain as follows: Flat head iron, 35 per cent.; flat head brass, 35 per cent.; Felisterhead iron, 30 per cent.; Felisterhead brass, 25 per cent.

BOLTS AND NUTS—Prices are very steady, and we are still quoting the following discounts: 3-8 and smaller, 60 per cent. and 10 per cent.; 7-16 and larger, 55 per cent.

HORSE NAILS—Discounts generally quoted are as follows: C brand, 40, 10 and 7 per cent.; M.R.M. Co., 55 per cent.; P.B. brand, 55 per cent.

WIRE NAILS—Unsettled trade conditions mentioned some time ago show little or no abatement. Prices as published are by no means strictly adhered to, but we still quote $2.05 per keg f.o.b. Montreal.

CUT NAILS—Trade is without feature. Price is still quoted as $2.20 per keg, f.o.b. Montreal.

HORSESHOES—Our prices are as follows: P.B. new pattern, base price $3.50 per 100 lbs.; M.R.M. Co. latest improved pattern iron shoes, light and medium pattern, No. 2 and larger, $3.65; No. 1 and smaller, $3.90; snow pattern, No. 2 and larger, $3.90; No. 1 and smaller, $4.15. Light steel shoes, No. 2 and larger, $4; No. 1 and smaller $4.25; featherweight, all sizes, No. 0 to 4, $5.60. Toeweight, all sizes, No. 1 to 4, $6.85. Packing, up to three sizes in a keg, 10c. per 100 pounds. More than three sizes 25c. per 100 lbs. extra.

SPORTING GOODS—Fishing tackle is of course in great demand, and other lines such as guns and ammunition are becoming favorites in the orders which are now being received.

BUILDING PAPER—Trade is only fair. All prices are the same as at our last report.

CEMENT AND FIREBRICK — The brisk demand previously noted continues very satisfactorily for all concerned. The market is very steady in tone, and we are still quoting as follows: "Lehigh" Portland in wood, $2.54; in cotton sacks, $2.39; in paper sacks, $2.31. Lafarge (non-staining) in wood, $3.40; Belgium, $1.60 to $1.90 per barrel; ex-store, American, $2 to $2.10 ex-cars; Canadian Portland, $2 to $2.05. Firebrick, English and Scotch, $17 to $21, American $30 to $35; White Bros.' English cement, $1.80 in bags, $2.05 in barrels in round lots.

COIL CHAIN—Trade conditions are unchanged. We quote: 5-16 inch, $4.25; 3-8 inch, $3.75; 7-16 inch, $3.55; 1-2 inch, $3.35; 9-16 inch, $3.30; 5-8 inch, $3.20; 3-4 inch, $3.05; 7-8 inch, $3; 1 inch, $2.95.

FREEZERS—Good orders are still coming in. Prices remain as follows: American Twin, 2 quart, $2.30, 3 qt. $2.65, 4 qt. $3.25, 6 qt. $4.15, 8 qt. $5.10, 10 qt. $6.40, 12 qt. $7.75, 15 qt. $9.95, and 20 qt. $13; Gem, 1 pt. $1.35, 1 qt. $1.60, 2 qt. $1.75, 3 qt. $2.15, 4 qt. $2.60, 6 qt. $3.25, 8 qt. $4.20, 10 qt. $5.45, 12 qt. $6.50, 14 qt. $7.25; Blizzard, 1 qt. $1.25, 2 qt. $1.70, 3 qt. $1.95, 4 qt. $2.35, 6 qt. $2.95, 8 qt. $3.70, 10 qt. $4.80, 12 qt. $5.75, 14 qt. $6.75.

GREEN WIRE CLOTH—Large sales are still being made, the warm weather having encouraged retailers to stock up. We still quote $1.45 per hundred square feet.

Ontario Hardware Markets.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, July 13, 1906.

A slight falling off is reported this week, but trade continues quite brisk for this season. Haying tools, hay carriers and similar goods are in good demand, but hay wire is pretty well sold for the season. Summer goods are still in good demand, the movement in screen doors, etc., being very satisfactory, but with not so much likelihood of a shortage as there was last season. Sporting goods and building supplies are having a seasonable demand.

American manufacturers are moving their list prices upward, the Ohio Tool Company having advanced their planes, the Upson Nut Company their rules and the Sargeant Manufacturing Company their lines.

AXES AND HANDLES—Trade con-

tinues normal, with no price changes.

CUTLERY AND SILVERWARE — The demand for Fall goods is picking up and sorting orders are fair.

SPORTING GOODS—Lawn bowling and cricket goods are selling well. Fishing tackle is a live line and ammunition is commencing to liven up.

SCREEN DOORS AND WINDOWS — Trade is slackening off, but green wire cloth is still selling well. There is some talk of a scarcity but one is not considered likely.

HAMMOCKS—The hot weather has created a large sale of these goods. A better class of hammock than usual is being asked for, and manufacturers are kept busy getting out stock.

LAWN MOWERS AND HOSE — Demand is decreasing but considerable sorting is reported.

REFRIGERATORS AND FREEZERS—A falling off is noticed in the demand.

WASHING MACHINES — A normal demand is noted.

CHAIN—We quote as follows : 1 inch, $6.60; 5-6 inch, $4.55; ⅞ inch, $3.95; 7-16 inch, $3.80; ½ inch, $3.65; 9-16 inch, $3.55; ⅝ inch, $3.45; ¾ inch, $3.35.

EXTENSION AND STEP LADDERS —Prices continue as follows : Step ladders at 10c. per foot for 3 to 6 feet, and 11c. per foot for 7 to 10 feet ladders. Waggoner extension ladders, 40 per cent.

POULTRY NETTING—Sales are reported large. We quote : 2-in. mesh, 19 w.g., discount 55 and 5 per cent. All others 50 per cent.

GALVANIZED WIRE — We quote : $2.17½ f.o.b. Cleveland.

BARB WIRE — Prices remain the same. We quote : On gauge 9, $2.40; gauge 12, $2.55; gauge 13, $2.65, f.o.b. Toronto.

OILED AND ANNEALED WIRE — (Canadian)—Gauge 10, $2.31; gauge 11, $2.37; gauge 12, $2.45 per 100 lbs.

WIRE NAILS—The open market continues, with prices unsettled, but we nominally quote : $2.05 base.

CUT NAILS—We quote : $2.20 base, f.o.b. Montreal. Toronto, 20c. higher.

HORSENAILS—"C" brand, 40, 10 and 7½ off list. "M.R.M." brand, 55 per cent off. "Monarch" brand, 50 and 7½ off. "Peerless," 50 per cent. off.

HORSE SHOES — Our quotations continue as follows : P. B. base, $3.65; "M.R.M. Co., latest improved pattern" iron shoes, light and medium pattern, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; snow No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $4.15; No. 1 and smaller, $4.40; featherweight, all sizes, 0 to 4, $5.75; toe weight, all sizes, 1 to 4, $7. Packing, up to three sizes in a keg, 10c. per hundred lbs. extra; more than three sizes in a keg, 25c. per hundred lbs. extra.

RIVETS AND BURRS—Tinned rivets have been advanced and are now quoted net extra 4 cents per pound.

SCREWS—We quote : On gimlet point 70 and 5 per cent. off ; on cone point, 70 and 10 per cent. off list.

BOLTS AND NUTS—Stocks are bare and manufacturers are said to be refusing to accept orders. We quote : 55 and 10 per cent. off list.

CEMENT — We quote : For carload orders, f.o.b. Toronto, Canadian Portland, $1.95. For smaller orders ex warehouse, Canadian Portland, $2.05 upwards.

FIRE BRICK—English and Scotch fire brick, 27c. to 30c.; American low-grade, 23c. to 25c.; high-grade, 27½c. to 35c.

HIDES AND WOOL—There are no price changes this week, and business is quiet.

Hides, inspected, steers, No. 1	0 12½
" " " No. 2	0 11½
" " cows, No. 1	0 12½
" " " No. 2	0 11

" washed fleece	0 27

Canadian Metal Markets.

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, July 13, 1906.

A weaker tone pervades the Canadian metal market at the present time, especially with reference to tin, spelter, antimony and lead. In nearly every case it is almost impossible to explain the drop on logical grounds, as the demand keeps up very strongly and there has been, so far as can be learned, no considerable increase in production to cause a sluggish market.

Copper is as firm as ever. Metal merchants here are experiencing the utmost difficulty in securing deliveries, and, from all appearances, copper is much more likely to go up than down.

Speculative operations are given as the only conceivable reason for the declining market in lead and zinc. Both of these metals are in very active inquiry, and almost every natural cause is on the side of high prices.

Antimony is slightly weaker, but judging from the condition of supply and demand, no decided decreases in price are to be expected for many months yet.

COPPER—Of the ingot metals, copper is the only one to maintain its strength this week. We still quote : Ingot copper, 21c. to 21½c. ; sheet copper, base sizes, 25c.

INGOT TIN—As ever, tin is fickle. At the end of last week and beginning of this, there was a very decided drop, but the metal strengthened perceptibly later on. At the time of writing prices are still somewhat weaker than at our last report, and even these figures will be shaded for quantities, on receipt of specifications. We now quote 43c. to 44c.

INGOT ZINC—It has surprised market experts to see spelter declining again, when everything seemed to point to a continuance of a firm market. We give the following price : 7c. to 7¼c. per pound.

ANTIMONY—The decline noted in our "Markets in Brief" last week is still ruling and we now quote : 28 cents per pound

PIG LEAD—Still another sagging is noticed this week. Present quotations are : $4.30 to $4.40 per hundred pounds.

PIG IRON—The market is quiet, and the Fall buying movement has not yet begun. Our quotations are as follows :

"Dom.," No. 1 $19.50 to $20.00 delivered Montreal
Usual difference in price for lower grades.

Ferrona No. 1	$19.50	delivered	Montreal
" No. 2	19 00	"	"
" No. 3	18 50	"	"
" No. 4	18.00	"	"
Londonderry	20.50	"	"
Carron No. 1	22.00	"	"
" (special)	21.00	"	"
Summerlee No. 1	22.00	"	"
" No. 3 (soft)	21 00	"	"
Clarence No. 1	18.50	"	"
" No. 3	18.00	"	"
Cleveland No. 1	18.25	"	"

BOILER TUBES—We quote : British and American tubes, 1 1-2 inch, 8 1-2c.; 2 inch, 8 1-2c.; 2 1-2 inch, 10c.; 3 inch, 12c.; 3 1-2 inch, 15 3-4c.; 4 inch, 20c.; 5 inch, 45c. Price per foot net.

TOOL STEEL—Our prices are unchanged : Colonial Black Diamond, 8c. to 9c.; Sanderson's 8c. to 45c., according to grade; Jessop's, 13c.; Jonas & Colver's 10c. to 20c.; "Air Hardening," 65c. per pound; Conqueror, 7 1-2c.; Conqueror High Speed Steel, 60c. ; Jowitt's Diamond J., 6 1-4c. to 7c.; Jowitt's Best, 11c. to 11 1-2c.

MERCHANT STEEL—Trade is good in nearly all lines. Prices remain as follows : Sleigh shoe, $2.17½ ; tire, $2.27½ ; spring, $2.75; toecalk, $2.82 1-2; machinery iron finish, $2.27 1-2; ruled machinery steel, $2.75; mild, $2.17 1-2 and upwards; square harrow teeth, $2.27 1-2. Net cash 30 days. Rivet steel quoted on application.

COLD ROLLED SHAFTING—We are still quoting: 3-16 inch to 1-4 inch, $6.80; 5-16 inch to 11-32 inch, $5.78 ; 3-8 inch to 17-32 inch, $4.76; 9-16 inch to 47-64 inch, $4.08; 3 1-8 inch to 3 7-16 inch, $3.60; 3-4 inch to 1 7-16 inch, $3.75; 1 1-2 inch to 3 inch, $3.50; 3 1-2 inch to 3 15-16 inch, $3.75; 4 inch to 4 7-16 inch, $4.08; 4 1-2 inch to 4 11-16 inch, $4.42.

GALVANIZED IRON — A shortage exists in the sheets of home manufacturers. Leading Canadian consuming interests are finding it difficult to procure supplies. We quote as follows : Queen's Head, 28 gauge, $4.35 to $4.60 ; 26 gauge, $4.20; 22 to 24 gauge, $3.65; 16 to 20 gauge, $3.50; Apollo, 28 gauge, $4.25 to $4.50; 26 gauge, $4.10; 22 and 24 gauge, $3.55; 16 to 20 gauge, $3.40; Comet, 28 gauge, $4.25 to $4.50; 26 gauge, $4.10; 22 and 24 gauge, $3.55; 16 to 20 gauge, $3.40; Bell brand, 28 gauge, $4.40 to $4.45; Fleur-de-Lis, 28 gauge, $4.20 to $4.45; 26 gauge, $4.05; 22 and 24 gauge, $3.50; 16 to 20 gauge, $3.35; Gorbal's "Best Best," 28 gauge, $4.20 to $4.45; "Windmill Best," 28 gauge, $4.15; Sword and Torch, 28 gauge, $4.15; Colborne Crown, 28 gauge $4.20 to $4.45. In less than case lots 25c. extra.

BLACK SHEETS—The market is very firm. We quote: 28 gauge, $2.40; 26 gauge, $2.35 ; 22-24 gauge, $2.30 ; 19-20 gauge, $2.30 ; 8-10 gauge, $2.45.

CANADA PLATES—An active in-

quiry is being maintained. Prices are steadily held. We quote: 52's, $2.60; 60's $2.65; 75's, $2.75; full polished, $3.75 to $4; galvanized, 52's, $4.10; 60's, $4.35.

TIN PLATES—Large sales are reported. Our prices remain: Cokes, base size, 1C 14x20, $4; charcoal, base size, 1C, 14x20, $4.25.

TERNE PLATES—Our price remains $6.85.

SHEET ZINC—Price is still steady, in spite of easier conditions in spelter. We quote: $8 in casks, $8.25 in less than casks.

SHEET LEAD—We are still quoting: 2½ lbs., 5½c. by the roll; 3 lbs. and heavier, 5¼c. by the roll; small quantities, 25c. per hundred lbs. extra.

BAR IRON—Trade is brisk, the price being steady at $2.05 f.o.b. Montreal.

OLD MATERIAL — Dealers' buying prices are as follows: Light copper, 14½c.; heavy red brass, 14½c.; yellow brass, 11 1-2c.; light brass, 7 1-2c.; lead, 3 1-4c.; zinc, 4c.; machinery cast scrap, $13; wrought scrap, $12; stove plate scrap, $10.50 to $11; mixed rags, $1 to $1.20 per 100 lbs.; old rubbers, 7½c.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, July 13, 1906.

The metal market this week is rather a weak one, although the only change made is in ingot tin, which is now quoted as low as 41c. Considerable fluctuations have been reported from outside markets, but the quotations here have not changed greatly, the reduction in the figures causing an active demand. For ingots, the trade in tin plates is rather quiet: Lead and spelter are both considerably weaker, although quotations remain about the same. Copper is fairly strong with a fair business being done. Antimony and brass occupy about the same position as a week ago. With the easing off of prices on ingot metals, there is a less active demand for old materials, but prices on these lines show no change as yet.

Pig and bar iron are rather quiet, although the mills are booked ahead for a long time. Manufacturers of bolts and nuts have so much business on hand that they are said to be refusing orders.

PIG IRON — Trade is quiet with prices the same. We quote as follows: Radnor at furnace, $30; Hamilton at furnaces, No. 1, $20.50; No. 2, $20; Londonderry, f.o.b., Toronto, No. 1, $21.50, No. 2, $21; Middleborough, $21.50.

BAR IRON—The good demand keeps up with stocks light. We quote: $2.15 base, f.o.b. Toronto, with discount of 2 per cent. net cash.

INGOT TIN—Outside markets have been much fluctuation in prices and quotations have been lowered to 41c. to 42c. per pound.

TIN PLATES—Demand has been less active for plates. We quote: Cokes, base size, 14x20, $4; charcoal, base size, 14x20, $4.50.

GALVANIZED SHEETS—Prices are well maintained and demand is active. We quote: 16 to 20 gauge, $3.45 up.

BRASS—The market continues firm with no price changes. Buying is active and quotations 23c. to 24c. per pound.

COPPER—Copper is holding strong and we still quote: Ingot copper, $20 per 100 lbs., and sheet copper, $25 per 100 lbs.

LEAD—Local dealers are still quoting $4.40 for imported pig, and $5 per 100 lbs. for bar lead.

ZINC SPELTER — The market is weaker and the demand locally fair. We quote: 7¼c. per lb. for foreign and 5¾c. to 6c. per lb. for domestic.

BOILER PLATES AND TUBES — A lively demand is experienced from threshers. Our quotations are as follows: Plates, per 100 lbs., $2.35; heads, per 100 lbs., $2.60; tank plates, 3-16 inch, $2.45; tubes, per 100 feet, 1½ inch, $8.50; 2, $8.80; 2½, $10.75; 3, $12; 3½, $15.80; 4, $20. Terms, 2 per cent. off.

ANTIMONY — Prices are unchanged and 27c. is quoted.

OLD MATERIAL — Dealers' buying prices are as follows: Heavy copper and wire, 15c. per lb.; light copper, 13½c. per lb.; heavy red brass, 13c. per lb.; heavy yellow brass, 11c. per lb.; light brass, 8½c. per lb.; tea lead, $3.25 per 100 lbs.; heavy lead, $3.50 per 100 lbs.; scrap zinc, 4½c. per lb.; iron, No. 1 wrought, $10.50 to $11; No. 2 wrought, $3 to $5; machinery cast scrap, $13.50 to $14; stove plate, $10; malleable and steel, $5; old rubbers, 7½c. per lb.; country mixed rags, $1 to $1.25 per 100 lbs., according to quality.

COAL—The usual monthly advance of 10c. has been made, the figures now being: Anthracite in cars at bridges, egg, stove and nut, $5.30; grate, $5.05; pea $3.60, per gross ton.

Standard Hocking, soft coal, in cars, f.o.b. at mines: Lump, $1.50; ¾ inch, $1.40; run of mine, $1.30; nut, $1.25; N. P. and S., $1; slack, 75c.; box cars, 10c. per ton additional.

Youghiogheny soft coal in cars, bonded at bridges: 1¼ inch, $2.50; ¾ inch, $2.40; mine run, $2.30; slack, $2.05.

For Manitoba, British Columbia and Maritime Provinces markets see pages following.

LONDON METAL MARKETS.

From Metal Market Report, July 11, 1906.

PIG IRON—Cleveland warrants are quoted at 50s. 1½d., and Glasgow standard warrants at 49s. 10d., making prices as compared with last week 3d. higher for Cleveland warrants and 3d. higher for standard warrants.

TIN—Spot tin opened weak at £167 10s., futures at £165 10s., and after sales of 150 tons of spot and 850 tons of futures closed weak at £165 for spot, £163 5s. for futures, making price compared with last week £14 5s. lower on spot, and £12 5s. lower on futures.

COPPER—Spot copper opened easy at £80 17s. 6d., futures £80, and after sales of 250 tons of spot and 50 tons of futures, closed easy at £80 10s. for spot and £79 5s. for futures, making price as compared with last week £1 lower on spot and £1 5s. lower on futures.

LEAD—The market closed at £16 6s. 3d., making price as compared with last week 7s. 6d. lower.

SPELTER—The market closed at £26 15s., making price as compared with last week 5s. lower.

U. S. IRON AND METAL TRADES.

From the Iron Age, July 12, 1906.

The monthly pig iron returns collected by the Iron Age show that the blast furnaces of the country, what with poor working in June and a steady crop of blowings out, are still falling behind in production. Our statistics of the coke and anthracite furnaces for June, 30 days, show an output of 1,970,733 tons, as against 2,098,746 tons in the 31 days of May and 2,073,222 in the 30 days of April. Thus each succeeding month shows a smaller daily rate of production. The weekly capacity of the 290 furnaces active on July 1 was 460,490 tons, as against 472,622 for 296 furnaces on June 1.

The general tone of the reports throughout the country with reference to the market in foundry iron is encouraging and shows a firmer feeling. In the eastern markets the local furnaces are meeting competition for such business as is not dependent upon specific brands.

While some large steel rail business for next year is pending, actual sales during the past week have not been large. Some figuring is going on over an additional 50,000-ton order for the Grand Trunk Pacific road, but it is rather doubtful whether any of the mills on this side of the line will be able to do anything with it. Negotiations are still pending on the large orders for rails for Cuba and South America.

Warned by the experiences of this season and encouraged by the outlook, the western agricultural implement manufacturers have resumed work at their plants to make stock for the 1907 season. So early a start is unprecedented and is bringing to the mills early specifications. The situation in steel bars is now thoroughly sound, the mills having very large commitments and receiving specifications liberally.

Reports from the lighter lines, wire, tubes, sheets, etc., are favorable throughout.

UNITED STATES METAL MARKETS.

From the Iron Trade Review, Cleveland, July 11, 1906.

The production of foundry iron is not keeping pace with the general increase of pig iron production, while the output of forge pig is actually decreasing. Several changes have contributed to this change in the general alignment. The most important as regards the change in foundry iron has been that the demand for rolled steel has increased much more rapidly than has the demand for castings. The next most important cause has been the growth of the steel casting industry, which draws trade from the grey iron foundry, thus tending to reduce the production of foundry pig iron, while at the same time swelling the production of steel-making pig. A more remote cause, but still one which exercises an appreciable influence, is the increased quantity of pig iron instead of scrap, which is used in basic open hearth steel manufacture.

Following the recent heavy sales of

iron, especially in the south, the market has been one of quiet firmness. There is a pronounced scarcity of Bessemer and basic grades, in which connection it is interesting to note that Bessemer is being shipped from Ironton, O., to the plant of the Algoma Steel Co. at the Soo. Seven furnaces in the valley will soon be out for repairs and there are indications that the supply of foundry irons during the last half will not be equal to the demand.

The condition of the steel industry at the beginning of the second half may be gauged from the fact that orders on hand at mills in the Pittsburg district are for a tonnage from 15 to 25 per cent. in advance of that at the same time a year ago. Some relief has been had from the scarcity of crude steel, especially in the Chicago district, through the fact that the Illinois Steel Co., having completed its open hearth extensions, will be a seller of billets.

Railroads are buying freely for bridge construction. The sales of the American Bridge Co. for the first half of the year were 50,000 tons in excess of those for any other half year of its history. Rail requirements for the current year had been underestimated, as is shown by the recent placing of round tonnages for this year's delivery. Light rails have advanced 50 cents per ton and are selling readily.

Nova Scotia Trade News.

Halifax, N.S., July 10.

Midsummer dullness has set in over the hardware trade, and there is very little doing at the present time. So far this year business has been good, and the jobbers are satisfied with the outlook. The good hay crop throughout the province has made a demand for rakes, scythes, stones and snaths. Some small sales of ice cream freezers have been made, and there is a fair demand for enamelware.

Bar iron is steady at $2.25, and zinc at 8¼ for casks and 8¾ for less. Wire nails are still quoted at $2.15 base, and $2.40 for cut base. Sheet lead in rolls is quoted at $5.75 and in smaller quantities at $6.25. Pig lead is $5.50 and turpentine 95 cents per gallon for casks and $1 for less than casks. There has been some demand for roofing materials, but no change in the price. Raw oil is quoted at 60 cents, and boiled at 63 cents. Stocks of glass held here are light, and dealers are complaining that they cannot get delivery of stock ordered months ahead. Sales of cement are good, the price quoted being $2.25.

* * *

A carload of machinery for the new foundry to be opened on Montague street, Lunenburg, has arrived, and is now being placed in position. The company has orders for considerable work ahead, and the plant will be put into operation immediately. It is the intention of the company to manufacture steering gear, pumps, winches, and other equipment. They will also handle the Leonard engines and boilers, and all woodwork tools. Mr. Holder will be the manager.

* * *

The Dominion Coal Company's output and shipments for the month of June total 325,991 and 362,011 tons respectively.

For the year ending June 30 the output of the various collieries of the Nova Scotia Steel & Coal Company has exceeded all previous records. The production in 1904-5 reached 476,516 tons, as against 558,316 tons in 1905-6. About 2,800 men are employed in the mines, exclusive of the office staff. It is stated that large limestone areas at Red Islands, Richmond County, are about to be actively developed by this company. These areas are located less than a mile from an excellent shipping point at East Bay.

* * *

The Beaver Hat Gold Mining Company has just received a brick of gold weighing 13½ ounces, obtained from a test of forty tons of ore, yielding 6 dwt. to the ton. The quartz was taken from a tunnel driven off the main shaft.

BRITISHERS AWAKENING.

A number of important points in connection with the manufacture and sale of machinery in Great Britain, in so far as it affects American trade, are pointed out in a recent report by U. S. Consul Halstead, of Birmingham, Eng.

In British mercantile and engineering circles, he states, they are sometimes mildly sarcastic about the ease with which catalogues can be obtained from American manufacturers, disclosing designs, and even giving best discounts. In one case, which he knows, an applicant for catalogles and quotations of American products was a designer in the employ of an English concern, making articles in competition with the American firm, and it profited greatly by making copies of American articles. An application on a private letterhead or from aprivate address to an English firm, he states, would not receive any attention, and when made on business stationery would generally result in a personal call from one of the English concern's travelers, the object being to size up the applicant before quoting prices or letting him have the catalogue.

Consul Halstead also states that the many visits of British manufacturers to American factories are bearing fruit and an English manufacturer is rapidly regarded as up-to-date to-day unless he has seen American factories. No one who has not lived in England during the last seven or eight years can realize how great the awakening has been, nor how changed the British mental attitude in regarding new ways of doing things. There has been much wise and clever adaptation to British cheaper labor needs of American machinery ideas. It has often been found profitable to simplify highly organized American machinery, even separating processes and dispensing with complicated parts requiring skilled mechanics to manage them, substituting instead hand-guiding manipulation for automatic work.

Several machinery manufacturers have developed a very large trade out of this type of simplified American machine for use with cheap labor. Large quantities of small articles are now cut from bar stock where formerly they were cast or produced upon simple lathes, the turnings for each of the several tools in a turret lathe being done by hand. It has revolutionized the brass trade.

HALF YEAR'S BUSINESS REPORT

Bradstreet's report of business failures in Canada and New Foundland for six months, 1906 and 1905, with assets and liabilities as follows :

Provinces and Territories.	No. of Failures. 1906	1905	Assets. 1906	1905	Liabilities. 1906	1905
Ontario	193	228	$ 648,499	$ 685,315	$1,333,864	$1,588,974
Quebec	280	243	1,018,860	1,288,250	2,771,500	2,944,798
New Brunswick	21	29	41,230	81,375	80,162	185,257
Nova Scotia	33	46	89,240	689,250	143,489	1,314,243
Prince Edward Island	3	5	19,150	61,700	41,897	94,900
Manitoba	68	48	223,315	247,458	511,165	461,536
Alberta, Saskatchewan	13	28	44,600	174,670	70,405	268,336
British Columbia	15	45	55,000	160,975	127,100	346,350
Yukon Territory	26	2	159,000	24,000	218,000	35,000
Total, Canada	652	674	$2,298,894	$3,412,993	$5,298,482	$7,239,364
Newfoundland	3	1	38,466	2,500	41,778	4,000

Canadian failures for six months of 1906 number 652, with liabilities of $5,298,482 and assets of $2,298,894, a decrease of 3.2 per cent. in the number and of 26 per cent. in the liabilities from a year ago.

RUBBER COMPANIES UNITE.

The Canadian Consolidated Rubber Company has been formed with $5,000,000 capital to take over the business of the Granby and Canadian Rubber Companies. G. W. Stephens, of the Canadian Rubber Company, will be president of the new combination.

PRACTICAL PHILOSOPHY.

"I aim to tell the truth," "Yes," interrupted an acquaintance, "and you are probably the worst shot in America."

He who works hard and uses all of a small opportunity will surpass the man who partly neglects a great one.

Hardware and Metal Conditions in Manitoba

(Market quotations corrected by telegraph up to 12 a.m. Friday, July 13, 1906.)

Office of HARDWARE AND METAL,
Room 511, Union Bank Building,
Winnipeg, Man.

For the midsummer season business is very active, there being a strong demand for all general lines of hardware. Builders supplies are, of course, in very strong demand, both in city and country. Values are steady except for an advance in rules.

GREEN WIRE CLOTH—Quoted at $1.55 per 100 square feet.

LANTERNS—Prices are quoted as follows: Cold blast, $5.25; coppered cold blast, $7.25; cold blast dash, $7.75; lift, $4.25 per doz.

WIRE—Jobbing prices are steady in spite of severe retail competition. This week's quotations are as follows: Barbed wire, 100 lbs., $2.90; plain galvanized, 6 to 8, $3.39; 10, $3.50; 12, $3.10; 13, $3.20; 14, $3.90; 15, $4.45; 16, $4.60; plain twist, $3; staples, $3.50; oiled annealed wire, 10, $2.96; 11, $3.02; 12, $3.10; 13, $3.20; 14, $3.30; 15, $3.45. Annealed wires (unoiled) 10c. less.

HORSESHOES — Quotations are as follows: Iron, No. 0 to No. 1, $4.65; No. 2 and larger, $4.40; snowshoes, No. 0 to No. 1, $4.90; No. 2 and larger, $4.65; steel, No. 0 to No. 1, $5; No. 2 and larger, $4.75.

HORSENAILS—Revised list and discounts are now as follows: No. 10, 20c.; No. 9, 22c.; No. 8, 24c.; No. 7, 26c.; No. 6, 28c.; No. 5, 32c.; No. 4, 40c., per pound. Discounts are quoted as follows: "C" brand, 40, 10 and 7½ per cent., "M" brand and other brands, 55 and 10 per cent. Add 15c. per box.

WIRE NAILS—Steady at $2.60 per keg.

CUT NAILS—Quoted now at $2.70 per keg.

PRESSED SPIKES—Prices are as follows: ½ x 5 and 6, $4.60; 5-6 x 5, 6 and 7, $4.25; ⅝ x 6, 7 and 8, $4.10; 7-16 x 7 and 9, $4.00; ½ x 8, 9, 10 and 12, $3.90; ⅝ x 10 and 12, $3.75.

SCREWS—Discounts are as follows: Flat head, iron, bright, 85 and 10 p.c.; round head, iron, 80 p.c.; flat head, brass, 75 and 10 p.c.; round head, brass, 70 and 10 p.c.; coach, 70 p.c.

NUTS AND BOLTS — Discounts are unchanged and continue as follows: Bolts, carriage, ⅝ or smaller, 60 and 5; bolts, carriage, 7-16 and up, 55; bolts, machine, ⅝ and under, 55 and 5; bolts, machine, 7-16 and over, 55; bolts, tire, 65; bolt ends, 55; sleigh shoe bolts, 65 and 10; machine screws, 70; plough bolts, 55; square nuts, case lots, 3; square nuts, small lots, 2½, hex nuts, case lots, 3; hex nuts, smaller lots, 2½ p.c.

RIVETS—Quoted now as follows: Iron, 60 and 10; copper, No. 8, 34½; copper, No. 12, 40 p.c.

COIL CHAIN — Unchanged in price. We quote: 3-16 inch, $9.25; 5-16, $5.20; ⅜, $4.45; ½, $4.10; ¼, $7.20; ⅝, $4.60; ¾, $4.30; ⅞, $4.

SHOVELS—Discounts on spades and shovels continue 40 and 5 p.c.

HARVEST TOOLS — Discounts continue 60 and 5 p.c.

AXE HANDLES—Quoted as follows: Turned, s.g. hickory, doz., $3.15; No. 1, $1.90; No. 2, $1.60; octagon, extra, $2.30; No. 1, $1.60.

AXES—Prices quoted as follows: Bench axes, 40; broad axes, 25 p.c. discount off list; Royal Oak, per doz., $6.25; Maple Leaf, $8.25; Model, $8.50; Black Prince, $7.25; Black Diamond, $9.25; Standard flint edge, $8.75; Copper King, $9.00; Columbian, $10.75; handled axes, North Star, $7.75; Black Prince, $9.25; Standard flint edge, $10.50; Copper King, $11 per doz.

BUTTS — The discount on wrought iron butts if 70 p.c.

CHURNS— The discounts from list continue as before: 45 and 5 per cent.; but the list has been advanced and is now as follows: No. 0, $9; No. 1, $9; No. 2, $10; No. 3, $11; No. 4, $13; No. 5, $16.

CHISELS—Quoted at 70 p.c. off list prices.

AUGER BITS—The list on "Irwin" auger bits is now the same as on common bits. Discount on "Irwin" is 47½ per cent., and on the common bits 70 per cent.

BLOCKS—Discount on steel blocks is 35 p.c. off list prices; on wood, 55 p.c.

FITTINGS — Discounts continue as follows: Wrought couplings, 60; nipples, 65 and 10; T's and elbows, 10; malleable bushings, 50; malleable unions, 55 p.c.

GRINDSTONES — The price is now 1¾c. per lb.

FORK HANDLES — The discount is 40 p.c. from list prices.

HINGES—The discount on light "T" and strap hinges is 65 p.c. off list prices.

HOOKS — Prices are quoted as follows: Brush hooks, heavy, per doz., $8.75; grass hooks, $1.70.

STOVE PIPES—Quotations are as follows: 6-inch, per 100 feet length, $8.50; 7-inch, $9.25.

DRAW KNIVES—The discount is 70 per cent. from list prices.

RULES—There has been a revision of the list, and the discount is now only 50 per cent. Formerly it was 50 and 10.

WASHERS—On small quantities the discount is 35 p.c.; on full boxes it is 40 p.c.

WRINGERS—Quotations are: Royal Canadian, $33; B.B., $37.75 per doz.

FILES—Discounts are quoted as follows: Arcade, 75; Black Diamond, 60; Nicholson's, 62½ p.c.

BUILDING PAPER — Prices are as follows: Plain, Joliette, 40c.; Cyclone, 55c.; Anchor, 55c.; pure fibre, 60c.; tarred, Joliette, 65c.; Cyclone, 80c.; Anchor, 65c.; pure fibre, 80c.

TINWARE, ETC. — Quoted as follows: Pressed, retinned, 70 and 10; pressed, plain, 75 and 2½; pieced, 30; japanned ware, 37½; enamelled ware, Famous, 50; Imperial, 50 and 10; Imperial, one coat, 60; Premier, 50; Colonial, 50 and 10; Royal, 60; Victoria, 45; white, 45; Diamond, 50; Granite, 60 p.c.

CORDAGE—Quotations are as follows: Rope, sisal, 7-16 and larger, basis, $11.25; Manila, 7-16 and larger, basis, $15.75; Lathyarn, $11.25; cotton rope, per lb., 21c.

SOLDER—Quoted at 27c. per pound. Block tin is quoted at 45c. per pound.

VISES — Prices are quoted as follows: "Peter Wright," 30 to 34 14½c.; 35 to 39, 14c.; 48 and larger, 13½c. per lb.

ANVILS—"Peter Wright" anvils are selling at 11c. per lb.

CROWBARS—Price has been reduced ½c. per lb. Quoted now at 4c. per lb.

POWER HORSE CLIPPERS — The "1902" power horse clipper is selling at $12, and the "Twentieth Century" at $6.00. The "1904" sheep shearing machines are sold at $13.60.

AMMUNITION, ETC. — We quote as follows: Cartridges, Dominion R.F., 50 and 5; Dominion, C.F., pistol, 30; military, 20; American R.F., 33½; C.F., pistol, 5 p.c.; C.F., military, 10 p.c. advance. Loaded shells: Dominion Eley's and Kynoch's soft, 12 gauge, black, $16.50; chilled, 12 gauge, $17.50; soft, 10 gauge, $19.50; chilled, 10 gauge, $20.50. Shot, ordinary, per 100 lbs., $7.00; chilled, $7.50; powder, F.F., keg, Hamilton, $4.75; F.F.G., Dupont's, $5.00.

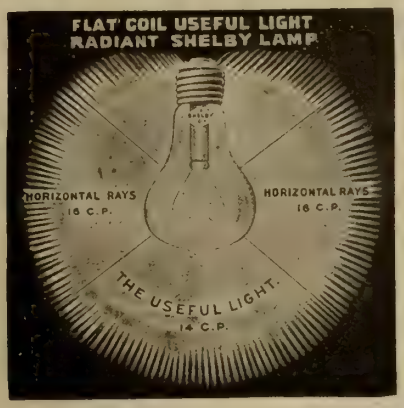
IRON AND STEEL—We quote: Bar iron (basis), $2.70; Swedish iron (basis), $4.75; sleigh shoe steel, $2.75; spring steel, $3.25; machinery steel, $3.50; tool steel, Black Diamond, 100 lbs., $9.50; Jesson, $13.00.

SHEET ZINC — The price is now $8.50 for cask lots, and $9.00 for broken lots.

PIG LEAD—As noted for some weeks past, there has been a steady upward trend in the lead market. While there is no quotable change in the market this week, the price is very firmly maintained and further advances would not surprise the trade. The price is now $5.25 per cwt., with a reduction of 25c. per cwt. for ton quantities.

AXLE GREASE—"Mica" axle grease has been advanced to $2.75 per case and "Diamond" to $1.60.

BLACK IRON PIPE—Quotations are: ¼ inch, $2.45; ⅜, $2.85; ½, $3.15; ¾, $4; 1, $5.75; 1¼, $7.85; 1½, $9.40; 2, $12.90.



GALVANIZED IRON — Quotations are: Apollo, 16 gauge, $3.90; 18 and 20, $4.10; 22 and 24, $4.45; 26, $4.40; 28, $4.65; 30 gauge or 10¾ oz., $4.95; Queen's Head, 24, $4.65; 26, $4.65; 28, $4.90.

TIN PLATES—We now quote as follows: IC charcoal, 20 x 28, box, $9.50; IX charcoal, 20 x 28, $11.50; XXI charcoal, 20 x 28, $13.50.

TERNE PLATES—Quoted at $9.00.

CANADA PLATES—Prices have been steady since the recent decline. We quote: Canada plate, 18 x 21, 18 x 24, $3.15; 20 x 28, $3.40; full polished, $3.90.

BLACK SHEETS—Prices are: 10 to 16 gauge, 100 lbs., $3.50; 18 to 22, $3.75; 24, $3.90; 26, $4.00; 28, $4.10.

No Horse Nails in the World

are made of better material than is used for the "C" brand. It is a special quality of Swedish Charcoal Steel Nail Rods, which have the highest tensile strength combined with great toughness. This is demonstrated by the average of several tests which shows that the test piece of these rods will stretch over one-third of its length, and require a force equal to 55,000 pounds per square inch before breaking.

No Horse Nails in the World

have ever, or do now excel the "C" brand in any test of quality impartially and scientifically applied. We challenge comparison with the product of any maker in the wide world.

No Horse Nails in the World

will drive easier or make better clinches, or hold the shoes on longer. They are of the right temper, which, combined with the fine hardened bevel points, penetrate the hardest hoofs easily. You will never bend or buckle a "C" nail in driving, or find split or crooked nails.

No Horse Nails in the World

can offer you forty years continuous manufacturing experience in producing by Canadian labour for Canadian requirements except the makers of the "C" brand.

No Horse Nails in the World

are better entitled to your preference for reasons of quality and fair price. They may be obtained on order from all the leading Hardware Merchants in Canada. If not obtainable through them, we shall supply you direct. Samples and quotations furnished on application.

CATALOGUES AND BOOKLETS

When sending catalogues for review, manufacturers would confer a favor by pointing out the new articles that they contain. It would assist the editor in writing the review.

By mentioning HARDWARE and METAL to show that the writer is in the trade a copy of these catalogues or other printed matter will be sent by the firms whose addresses are given.

Illustrated Price List.

The Guelph Stove Co., of Guelph, Ont., now under the management of N. L. Stewart, are the manufacturers of the Perfect Idea range, and a new line of Oak Idea heaters, also the Grand Idea cold base burner. They are adding other new lines of steel ranges which will be ready for the Fall trade. Mr. Stewart is at present in the Northwest looking over the situation there. They have branches in Winnipeg and Calgary, and the trade in the west can be supplied from these branches, which will insure prompt shipment. A new illustrated net price list is now ready and will be sent to the trade on request.

Saw and File Catalogue.

Henry Disston & Sons, Adelaide street east, Toronto, and Philadelphia, Pa., have issued a new catalogue and circular illustrating cross-cut saws, cross-cut saw tool, saw handles and files.

Asbestos Sad Irons.

A handsome and neatly arranged catalogue has recently been issued by the Dover Mfg. Co., Canal Dover, Ohio. The company manufacture asbestos sad irons for every purpose and are made in a variety of shapes, sizes and weights. They are packed for shipment in various combinations to provide the proper tool for every grade of ironing. Dealers interested should send for catalogue.

Ice Cream Freezers.

The Dana Mfg. Co., Cincinnati, Ohio, are issuing a seasonable catalogue of ice cream freezers. A good feature of the Dana make is that the gearing is outside the freezer, thus insuring cleanliness and freedom from salt and ice.

"Sovereign" Catalogues.

"Sovereign" means first — nothing above — and that briefly outlines the quality of the new "Sovereign" radiator catalogue "F" received this week from the Taylor-Forbes Company, Guelph. Typographically it is a sovereign and the quality of the contents, illustrations, descriptions, sectional measurements, tabulated information, plans, specifications, and reading matter is all worthy of special mention. The illustrations of "Sovereign" radiators show all sizes and forms for use under windows or stairways, in corners, around columns, on walls, etc., as well as showing the valves, fittings, etc., used with the "Sovereign."

Catalogue "G," devoted to hot water and steam "Sovereign" boilers, has also been received, it showing and describing the Canadian, Western, and Western Junior, steam boilers, Sovereign, Advance, Western, and Western Junior, hot water boilers, and Little Giant and Improved Giant tank heaters. Sectional cuts accompany the regular engravings, tables and descriptive matter also being given regarding each line. The construction of the boilers is plainly shown and the book on the whole is a valuable one for any fitter to have on file.

Any person in the trade who has not secured copies of these catalogues as yet should send for one at once before the supply is exhausted.

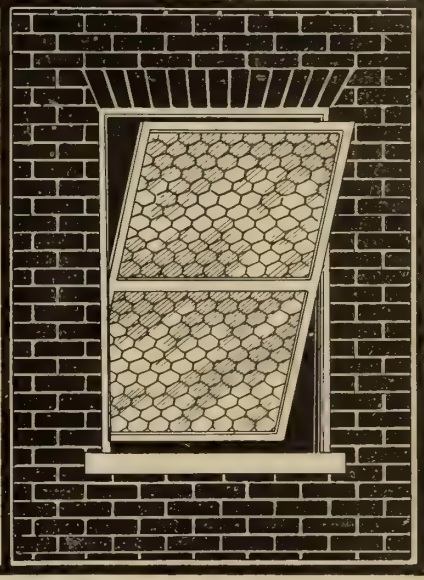
FIRE-PROOF GLASS WINDOWS THAT ARE FIRE-PROOF

These windows in a fire-proof building, complete the security, and in any building will thoroughly prevent the spread and advancement of the fiercest flames.

Better than iron shutters (even if they happened to be closed at the needed time); fire-proof glass remains intact, resisting both the intense heat of the fire and the action of water.

Many practical tests have proved it's efficiency.

Used in conjunction with our hollow sheet-metal frames and other fire-proof fittings, it gives the most perfect protection available.



It's adoption lessens insurance rates.

If you want to know more about "fire-proof windows," write us, it's an interesting subject.

WELLAND CANAL
PORT COLBORNE ELEVATOR

NOTICE TO CONTRACTORS

SEALED TENDERS addressed to the undersigned and endorsed "Tender for Elevator," will be received at this office until 16 o'clock on Wednesday, the 15th August, 1906, for the construction and erection of an 800,000 bushel capacity Elevator at Port Colborne, Ont.

Plans and specifications of the work can be seen on and after this date at the Office of the Chief Engineer of the Department of Railways and Canals, Ottawa, and at the Office of J. A. Jamieson, Consulting and Designing Engineer, Board of Trade Building, Montreal, at which places forms of tender may be obtained.

In the case of firms there must be attached the actual signatures of the full name, the nature of the occupation and place of residence of each member of same, and, further, an accepted bank cheque for the sum of $25.000 must accompany the tender; this accepted cheque must be endorsed over to the Minister of Railways and Canals, and will be forfeited if the parties tendering decline entering into contract for work at the rates and terms stated in the offer submitted. The accepted cheques thus sent in will be returned to the respective parties whose tenders are not accepted.

The lowest or any tender not necessarily accepted.

By Order,
L. K. JONES,
Secretary.

Department of Railways and Canals,
Ottawa, July 6, 1906.

Newspapers inserting this advertisement without authority from the Department will not be paid for it.

FOUNDRY AND METAL INDUSTRIES

Japanese metal buyers are looking to Canada for future supplies of nickel and carbide.

The Vulcan Boiler Works have commenced the manufacture of boilers at New Westminster.

The works of the Dominion Steel Co. have been shut down temporarily for a clean up of the plant.

E. A. Wallberg, Montreal, has secured the contract for the new 132x364 foot steel and concrete car repair shop to be erected at Moncton, N.B., for the Intercolonial Railway.

The Hamilton Steel & Iron Co. have decided to build their new blast furnace at Hamilton, at a cost of $250,000. It will be completed by 1907, and according to the bargain the company made with the city its total assessment will be $300,000.

For the year ending June 30, the output of the different colleries of the Nova Scotia Steel & Coal Co. exceeded all previous records. In 1904-5, the total production amounted to 476,510, as against 558,316 tons in 1905-6. This is over 80,000 tons in excess of last year, and with the installation of modern machinery, and the opening up of the old Queen pit, there is no reason to doubt that the ensuing year will mark an epoch in mining for this industry. There are at work in the mines over 2,800 men, exclusive of the office staff.

NEW TREATMENT OF IRON ORE.

Australian inventors have for some time been experimenting with an improved process for the treatment of iron ore, and results achieved are claimed to have been so successful from an economical and practical standpoint, as to influence capitalists to take hold of the enterprise and exploit it throughout the world. A trial of this new process—which is called the Heskett-Moore patent—was recently made at the works of the inventors in Melbourne, where operations were in full force for the treatment of ferruginous ore for the manufacture of iron and steel by a direct and continuous method of manipulation. A number of experts present expressed the opinion that the trial was most satisfactory, and as a consequence were emphatic in predicting a revolution in the recognized methods of iron and steel manufacture throughout the world.

The Heskett-Moore process is a method for directly converting iron ore into malleable iron or steel by a continuous system, and it is claimed effects a saving of 25 per cent. in the manufacture. The ore is simply concentrated by ordinary methods, or if it is magnetic it is separated electrically until the pure oxide of iron is obtained. The oxide of iron is passed through a revolving cylinder heated by waste gases from subsequent operations, and brought in that cylinder to a dull red heat. It drops from the cylinder to a second similar cylinder, and in the latter it is brought into contact with the deoxidising gas, which is forced through, and brought into contact with the heated ore. The heated ore is thus converted into a pure iron. Accompanied by, and protected by, the deoxidising gas, it is passed into a third chamber, or melting hearth, where it falls into a bath of molten iron, and is converted directly into steel, or balled up as malleable iron. Briefly, the savings claimed for the process are those of time, labor—the whole process being automatic—fuel and avoidance of flux. The inventors claim that they have discovered a direct method of producing steel from one operation, instead of using the blast furnace and converter.

The inventors state that the cost of erecting a large smelting plant on the Haskett-Moore system would be less than one-fourth of the cost of a smelting plant on the existing methods to produce the same quantity of metal. Any iron ore can be treated by this process, but the immense deposits of iron sand in New Zealand—in consequence of its natural fineness—is particularly adapted for this new treatment.

Patent rights for this process have been applied for throughout the world, and in some instances have already been secured. The Department of Trade and Commerce, Ottawa, now has available a detailed description and blue print drawings of the process, supplied by D. H. Ross, Canadian commercial agent at Melbourne. A number of copies of these specifications will be available to Canadian ironmasters who may be disposed to investigate the great advantages claimed for this new method of ore treatment. It is the intention of the inventors to dispose of their foreign and over-sea patent rights, retaining only Australia and New Zealand as a field for their own enterprise.

PAINT, OIL AND BRUSH TRADES

MAIL ORDER PAINTS ANALYZED

In North Dakota a new law compels paint manufacturers, whose products are used in the state, to give the analysis where adulterants are used.

The North Dakota agricultural college, in Bulletin No. 67, gives information regarding paints that every consumer and dealer ought to know, says the National Hardware Bulletin.

They declare some paints contain constituents which lower the value and injure the quality, and this should be known to enable the consumer to make an intelligent selection for his own use. They further say they cannot find a single reliable statement anywhere showing that the presence of either water or alkaline soap adds value to paint. They quote authorities to show water is only used to cheapen paint; that it makes it look thicker and deceives the buyer into thinking he is getting more for his money; that its presence denotes alkali—alkali injures the oil and shortens the life of any paint. "If a paint contains water it is not a good paint." "If water and alkali constitute a fraud, the people know it and have an opportunity to judge the character of the paint they desire to use upon their buildings?"

On page 596 of the bulletin, analysis No. 48 applies to "Seroco," a ready-mixed paint made by Sears, Roebuck & Co., a Chicago catalogue house, and shows twenty-four per cent. of the liquid portion of this paint is water. This analysis also shows that over fifty-one per cent. of the pigment is nothing more nor less than whiting and barytes (mineral clay)—products that sell on the market for about seventy-five cents per hundred pounds. As the best white lead or zinc sells around $7 per hundred, it is easy for anyone to see why.

The Guarantee.

The Sears, Roebuck Co's guarantee reads:

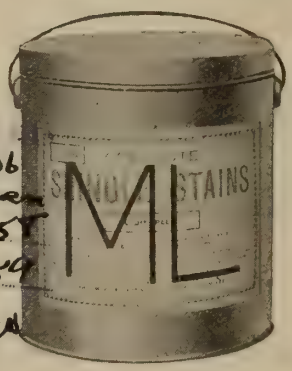
"We guarantee our paint to be the highest grade of mixed paint made, regardless of price; guarantee it to wear under all climatic conditions for at least ten years. We guarantee that at the end of seven years it will look better than any other paint at the end of two years. We guarantee it will not chalk, peel off or blister. We guarantee it will adhere to wood, tin, iron, galvanized iron, stone, tile, cement, or plaster; in short we guarantee it superior to any other paint made regardless of price, guarantee it to cover double the surface and last twice as long as any other paint made."

The absurdity of the statements made in this guarantee stamp it purely as a bait to catch suckers with.

Analyzing the report made in the North Dakota bulletin referred to above it shows first that the package examined was short measure. Now, the net weight of the quarter gallon can in question was 3 lbs. 2 oz. or 12 1-2 lbs. to the gallon. Of all the paints analyzed and reported in this bulletin, 23 in all, there were only three which weighed less than the brand in question and one which weighed just the same. The balance of the paints all weighed considerably more, ranging as high as 16 1-4 lbs. with the exception of one paint which weighed 19 1-2 lbs., which, however, was a semi-paste as is shown by the analysis.

Now, comparing this 12 1-2 lb. paint to the 16 1-2 lb. paints, there is a difference of four pounds in the weight per gallon which must be accounted for in some manner. The question is, where does this difference come in? The bulletin shows that 63.1 per cent. of the total weight was pigment, the balance, or 39.9 per cent., fluid. This shows then 7.89 lbs. pigment in a gallon of paint. This is made up, according to the percentages in the bulletin, as follows:

Analysis of Seroco Paint.



Pigment.

	per cent.	lbs.
Lead (calculated as white lead)	13.85	1.09
Zinc oxide	34.83	2.75
Calcium carbonate	26.84	2.12

Montreal, July 13 1906.

Linseed oil has developed a decidedly weak tone and prices are now being quoted 2 cents lower than last week. Early in the week jobbers began to shade prices on round lots, but the decline became more noticeable and quotations dropped in consequence.

Turpentine maintains its normal figure and conditions point to steady quotations for some time to come.

The week just past has been remarkable for the great call for paris green. So many specifications have been received that the Canadian manufacturers have been cleaned out of every keg they have made, and were compelled to advise their travelers by wire not to take any more orders for the season. The demand is chiefly from Kingston eastward to the sea, and it looks as though a shortage would be experienced in the retail trade as well as with the manufacturers.

General painting supplies move along very actively and the market may be briefly described as steady.

TURPENTINE — Conditions now apparent make for a steady market. We quote as follows: Single barrels, 86c. per gallon; two barrels or over, 85c. per gal.; for smaller quantities than barrels, 5c. extra per gal. is charged. Standard gallon is 8.40 lbs., f.o.b. point of shipment, net 30 days.

LINSEED OIL—The tone of the market is somewhat weaker, and prices are shaded on good quantities. Our quotations are: Raw, 1 to 4 barrels, 52c.; 5 to 9 barrels, 51c.; boiled, 1 to 4 barrels, 55c.; 5 to 9 barrels, 54c.

GROUND WHITE LEAD — We quote: Best brand Government standards, $6 to $6.25; No. 1, $5.65 to $5.90; No. 2, $5.30 to $5.65; No. 3, $5.05 to $5.30, all f.o.b. Montreal

DRY WHITE ZINC—Our prices are: Red seal, 7c. to 8c.; French V.M., 6c. to 7c.; Lehigh, 5c. to 6c.

WHITE ZINC (ground in oil — We quote: Pure, 8c. to 9c.; No. 1, 6½c. to 7½c.; No. 2, 5½c. to 6½c.

PUTTY—Our quotations are: Pure linseed oil, $1.75 to $1.85; bulk in barrels, $1.50; in 2-lb. irons, $1.80; in tins, $1.90; bladdered putty in barrels, $1.75.

ORANGE MINERAL—We quote as follows: Casks, 7½c.; 100-lb. kegs, 7½c.; smaller quantities, 8½c.

RED LEAD — Prices are firmly held as follows: Genuine red lead in casks, $6; in 100-lb. kegs, $6.25; in less quantities at the rate of $7 per 100 lbs.; No. 1 red lead, casks, $5.75; kegs, $6, and smaller quantities, $6.75.

GUM SHELLAC — We quote: Fine orange, 55c. per lb.; med. orange, 50c. per lb.; bleached shellac (white), 60c. per lb.

SHELLAC VARNISH — We quote: Pure white, $2.90 to $2.95; pure orange, $2.70 to $2.75; No. 1 orange, $2.50 to $2.55.

MIXED PAINTS—Prices range from $1.20 to $1.40 per gallon.

CASTOR OIL—Firsts in cases, 8½c.; in barrels, 8c.; seconds in cases, 8c.; in barrels, 7½c.

REFINED PETROLEUM — We quote as follows: American water white, 17c.; Canadian prime white, 15½c.; astral, 20c., ex warehouse.

PARIS GREEN—We quote the following prices, which are subject to withdrawal or change: Barrels, 600 lbs., 19½c. per lb.; kegs, 250 lbs., 19½c. per lb.; 50-lb. drums, 20c. per lb.; 25-lb. drums, 20½c. per lb.; 1-lb. pkts., 100 lbs. in case, 21c. per lb.; 1-lb. pkts., 50 lbs. in case, 21c. per lb.; ½-lb. pkts., 100 lbs. in case, 23c. per lb.; 1-lb. tins, 100 lbs. in case, 22c. per lb. Terms 2 per cent. 30 days.

GASOLINE—The ruling quotation at present is 24c. in bbls.

BENZINE—Market is steady at 24c. in bbls.

WINDOW GLASS—We quote: First break, 50 feet, $1.85; second break, 50 feet, $1.95; first break, 100 feet, $3.50; second break, 100 feet, $3.95; third break, 100 feet, $4.25; fourth break, 100 feet, $4.50; fifth break, 100 feet, $4.75; sixth break, 100 feet, $5.25; seventh break, 100 feet, $5.75; eighth break, 100 feet, $6. Diamond star, first break, 50 feet, $2.05; second break, 50 feet, $2.25; first break, 100 feet, $3.90; second break, 100 feet, $4.30; third break, 100 feet, $5.25; fourth break, 100 feet, $6; fifth break, 100 feet, $7; sixth break, 100 feet, $7.50; seventh break, 100 feet, $8.50. Double thick, first break, 50 feet, $3.20; second break, 50 feet, $3.50; first break, 100 feet, $6.25; second break, 100 feet, $6.50; third break, 100 feet, $8.25; fourth break, 100 feet, $9.50; fifth break, 100 feet, $11; sixth break, 100 feet, $12; seventh break, 100 feet, $13.50; eighth break, 100 feet, $16; ninth break, 100 feet, $17.50; tenth break, 100 feet, $19.50; eleventh break, 100 feet, $23.50; twelfth break, 100 feet, $28.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East.
Toronto, July 13, 1906.

Although we have no price changes to report this week another drop in linseed oil is considered probable on account of the continued weakness in the English market. Last year large importations of English oil were being made by Canadian buyers, but this season the native

TO THE VARNISH BUYER

the most serious considerations are quality, reliability and uniformity, and these qualifications are of special importance to the dealer who is trying to build up a permanent varnish trade.

Berry Brothers' label or brand may be safely relied upon as ensuring the above conditions.

Our varnishes are the safest goods to handle and the surest and most reliable goods to use.

SPECIAL

TO THE TRADE

ONLY

WE ARE FREQUENTLY ASKED TO TAKE BACK LIQUID PAINTS OF OTHER MAKERS AND GIVE OUR BRANDS IN EXCHANGE. WE BEG TO REPEAT THAT ON NO ACCOUNT CAN WE DO THIS. WE CANNOT MAKE ANY ALLOWANCE FOR, OR TAKE INTO OUR PREMISES, ANY RETURNED LIQUID PAINTS.

THE CANADA PAINT COMPANY LT'D

crushers are practically supplying the local market. This, of course, deprives English crushers of a large customer. Turpentine is holding very firm.

Paris green has been having an enormous demand and paint business keeps up very brisk in all lines, the volume for the year having made a record-breaking total. One Toronto manufacturer reports a 30 per cent. increase, while another reports sales for the nine months from September to July as nearly $30,000 greater than the same months the year previous. The large business done last Fall has apparently had no effect in decreasing the volume of this Spring's trade.

WHITE LEAD— Ex Toronto, pure white, $6.30; No. 1. $5.92 1-2c.; No. 2, $5.55; No. 3, $5.30; No. 4, $5.05 in packages of 25 pounds and upwards; 1-2c. per pound extra will be charged for 12 1-2 pound packages; genuine dry white lead, in casks, $5.40.

RED LEAD—Genuine in casks of 500 lbs., —$5.75; ditto, in kegs of 100 lbs., $6.60; No. 1 in casks of 500 lbs., $5.50; ditto, in kegs of 100 lbs., $5.75.

DRY WHITE ZINC—In casks, 7c.; in 100 lbs., 7 1-2c.; No. 1, in casks, 6c.; in 100 lbs., 6 1-2c.

WHITE ZINC (ground in oil)—In 25-lb. irons, 8c.; in 12 1-2 lbs., 8 1-2c.

SHINGLE STAIN—In 5-gallon lots, 75c. to 90c. per gallon.

PARIS WHITE—90c. to $1 per 100 lbs.

WHITING—60c. to $1 per 100 lbs. Gilders' whiting, 75c.

PARIS GREEN— Canadian Government standard, 600-lb. barrels, 19 1-4c.; 20c.; 25-lb. drums, 20 1-2c.; 1lb. packages, 21c.; 1-2 lb. packages, 23c.

SHELLAC VARNISH— Pure orange in barrels, $2.80; white, $2.90 per barrel; No. 1 (orange), $2.25.

LINSEED OIL—Our quotations are: Raw, 1 to 4 barrels, 55c.; 5 to 9 barrels, 53c.; boiled, 1 to 4 barrels, 58c.; 5 to 9 barrels, 56c. Toronto, Hamilton, London and Guelph; net 30 days. Advance of 2c. for delivery to outside points.

TURPENTINE—Single barrels 85c.; 2 to 4 barrels, 81c., f.o.b. point of shipment, net 30 days. Less than barrels, 90c. per gallon.

GLUES—Broken sheet, in 200-lb. barrels, 5 to 25c. per lb.; cabinet glue, in barrels, 11 1-2c. to 12c.; emery glue, in barrels, 15c.; bookbinders' ground, 11 1-2c.; finest American white 19c. per lb.; No. 1 American white, 15c. per lb.

PUTTY—Ordinary, bladders in barrels, $1.80; pure linseed oil, $2 to $2.10; bulk, in 800-lb. casks, $1.50; pure, $1.95 to $2; 100-lb. kegs, 25c. extra.

LIQUID PAINTS— Pure, $1.20 to $1.35 per gallon; No. 1, $1.10 per gal.

BARN PAINTS—70c. to 80c.

BRIDGE PAINTS—75c. to $1.

CASTOR OIL—English, in cases, 9½c. to 10c. per lb., and 11c. for single tins.

REFINED PETROLEUM—Trade continues normal. We quote: Canadian prime white, 14c.; water white, 16c.; American water white, 16c. to 18c. ex warehouse.

CRUDE PETROLEUM— We quote: Canadian, $1.38; Pennsylvania, $1.64; Ohio, 98c.

MAIL ORDER PAINTS ANALYZED.

(Continued from page 44.)

On the basis of the prices given in the North Dakota bulletin, which are

White lead, dry	.05
Oxide of zinc	.07
Barytes	.01
Calcium carbonate	.01

(taken at Paris white price) we have the following:

1.09 lbs. lead (calculated as white lead)	.0763
2.75 lbs. zinc oxide	.1375
2.12 " calcium carbonate	.0212
1.82 " barytes	.0182
.11 " undetermined (figured as calcium carbonate)	.0011
Cost of pigment in one gallon paint	.2543

Now, compare against this one of the brands of paint shown on this bulletin which weighs 16 1-2 lbs. per gallon and we have a paint representing 63.57 per cent. pigment and 36.43 per cent. fluid, both by weight, representing 10.49 lbs. of pigment in each gallon can. This is made up as follows:

	per cent.	lbs.
Lead (calculated as white lead)	43.45	4.56
Zinc oxide	45.75	4.80
Calcium carbonate	10.39	1.09
Undetermined	.41	.04
Total	100.00	10.49

Now, figuring this out the same way, we have

4.56 lbs. lead	.3192
4.80 " zinc oxide	.24
1.09 " calcium carbonate	.0109
.04 " undetermined (figured as Paris white)	.0004
Cost of pigment in 1 gallon can	.5705

This comparison speaks for itself. In the first paint we have a product, the pigment cost of which in a gallon of paint is practically 25 1-2 cents per gallon. In the second paint the pigment cost in a gallon of paint is 57 cents. This, of course, does not include cost of making, package, etc.

The same line of figuring could be followed out with the fluid portion and would show just about the same comparison. As a matter of fact, the fluid portion of the paint in question shows 24 per cent. of water. While Professor Ladd of the North Dakota Government Experiment Station has recently stated in an official letter that he considers 1 1-2 per cent. of water in a prepared paint as incidental, there can be no question as to the motives which

prompt the user of so large a percentage as is shown herein, namely 24 per cent. Cheapening the paint is the sole motive and this is done purely and simply at the expense of the quality of the product.

Not in the Same Class.

Those reputable manufacturers who are using the best materials known to the present science of paint making and who are utilizing the best experience and the best facilities, including chemical laboratories for the purpose of analyzing and watching all crude materials, as well as improved machinery, etc., should not in justice to themselves and in justice to the conscientious consumer, be put in the same class with makers of products such as that in question. A paint made purely and simply to sell at a price and which will yield to the manufacturers the greatest possible revenue can at best be but a short lived proposition, and the only hope its manufacturers can have in continuing its sale from year to year is the fact that this country is so large that each year new fields are found for the sale of their wares.

Paints like the above could be taken up and discussed at length, such as, for instance, their instructions that raw linseed oil should never be used and that boiled oil should be employed for the reduction of their paint. To all paint people who are keeping abreast of the times and watching developments it is a well known fact that boiled linseed oil does not dry upon the right principle, and on account of the ease with which it can be adulterated, as compared to linseed oil, the latter should always be used, particularly for under coats.

FRANCIS-FROST FACTORY.

Work has commenced on the new $30,000 factory for the Francis-Frost Co., at Toronto Junction. The building will be 50 x 150 and is to be completed by Sept. 15, by which date the old factory on Queen street east, Toronto, will be vacated.

TOUGH PAINT.

A formula given by Karl Holm for a paint that is very hard is as follows: "Mix your color, as usual, to the tint and shade wanted, in pure boiled linseed oil to a stiff batter; then take some old paint skins, which you burn, and when cold gather up the ashes and grind them in turpentine. For driers use sugar of lead and turpentine. For thinners use pure boiled linseed oil. For body zinc is preferable to lead. The action of the ashes is to harden the paint. When using this kind of paint use it the same for all the different coats, using more or less turpentine for the under coats. You can varnish over this paint, if desired."

BORING FOR OIL.

R. R. Gamey, M.P.P., reports that drilling for petroleum is still going ahead on the eastern end of Manitoulin Island and that hopes are entertained of a big strike being made shortly. The depth of the oil bearing stratum is about 450 feet, and three or four drills are working steadily prospecting at likely points.

IMPURE LINSEED OIL.

In the case of Pilcher vs. Price in the Portsmouth County Court, England, judgment was rendered in favor of the plaintiff for $500 damages and costs for the sale by defendant to plaintiff of linseed oil containing 30 per cent. of kerosene. Evidence showed that the use of this oil ruined a job and necessitated cleaning off the work, at great expense.

TILBURY OIL WELLS.

There are now thirteen wells in the Tilbury oil fields and every one is a producer. A firm from Ohio is establishing an oil tank factory at Tilbury and a West Virginia firm will start manufacturing nitro-glycerine and dynamite shortly.

DURABILITY

Don't Forget That's a Characteristic of "Ark Brand" Paints.

These paints have to go the whole paint journey because they have a through ticket of ingredients.

Durability is the most important factor to be considered when buying paints.

The business a dealer has to depend on is the business that depends on the goods.

Take "Ark Brand" Paints into your family and thereby add figures to your sales account.

BUILDING AND INDUSTRIAL NEWS

HARDWARE AND METAL would be pleased to receive from any authoritative source building and industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories, foundries or other works, railway or mining news. All correspondence will be treated as confidential when desired.

The Hamilton Bridge Works are to build an addition to their works 400 x 420 feet.

The Canadian Folding Box Co., Brantford, are looking for a site for enlarging their plant.

The Cockshutt Plow Co., Brantford, intend to build an addition to their three storey warehouse.

The C.P.R. is to establish a larger repair shop at Medicine Hat and other improvements will be made to the company's plant there.

Goderich has passed a by-law to guarantee bonds amounting to $150,000 for the Maitland River Power Co.

The Climax Road Machinery Co., Marathon, N.Y., proposes establishing a Canadian factory and may locate at Hamilton.

The Peterboro Radiator & Boiler Co. are asking Hastings for a $5,000 bonus and other inducements to locate a factory in that town.

James J. Hill is said to be planning a canal from Lake Winnipeg to Lake Superior in order to control the grain trade of the Canadian Northwest.

Glencoe has carried a by-law to aid the Fletcher Mfg. Co. to the extent of $3,000, the company agreeing to employ at least 25 skilled mechanics.

The Canadian Northern Railway Co. is adding this season 1,500 box cars, 100 flats and 16 new locomotives to the rolling stock equipment of the western end of their system.

The Canadian Northern Railway has closed a contract with J. T. Schell, M.P., for Glengarry, for the construction of a branch from Hawkesbury to Ottawa, a distance of 55 miles.

Application has been made for incorporation of the Perth Bolt & Forging Co. This company has acquired the old bolt works property at Perth. The company is capitalized at $50,000.

The Robbins Irrigation Co. have entered into a contract to spend $1,000,000 on irrigating a tract of land near the Crow's Nest Pass line of the C.P.R. Canning and beet sugar factories will also be established at Medicine Hat.

Berard & Major, Montreal, have been incorporated with $200,000 capital by Dominion charter proposing to make vehicles of all kinds. The incorporators are A. Berard, E. Major, J. Berard, G. Major and J. M. Mercier, all of Montreal.

Cornwall has passed a by-law giving a bonus of $20,000 and 10 years exemption to the Modern Bedstead Co., of Sherbrooke, Que., who agree to form a joint stock company with $150,000 capital, and establish a factory to employ 100 or more men.

The Supreme Heating Co. have been formed at Owen Sound with $200,000 capitalization by S. J. Parker, A. J. Ross, W. R. Hampden, W. Taylor and A. G. MacKay, all of Owen Sound. The company proposes to manufacture stoves, ranges, furnaces and other heating goods.

The Clark Automatic Nut Lock Co., Montreal, capitalized at $500,000, has secured a Dominion charter and propose to manufacture bolts, nuts and other metal goods. J. D. Good, E. James, W. J. Henderson, J. Rockwell, and E. Lanquedoc, all of Montreal, are the incorporators.

Contracts have been closed by an influential grain firm with the Northern Construction Co., Winnipeg, for the erection of 10 to 15 modern grain elevators to be ready for the handling of this season's crop. This firm has also commenced the erection of a large storage elevator in Point Douglas for the Canada Paint Co.

Arrangements are being completed by the Grand Trunk Pacific Railway for the transportation of 289 cars, engines and steam shovels from Montreal to Portage la Prairie, the point at which the construction of the new transcontinental line commenced. These cars and locomotives form Grand Trunk Pacific rolling stock, and their movement to the west means the inauguration of advanced construction work.

Two dastardly attempts at belt-cutting and arson have occurred recently at the Rathbun Works, Deseronto. On Wednesday last somebody cut the big belt which runs the machinery of the cedar mill. The engineer discovered the cut just as he was starting up. The same night somebody started an incendiary fire in the mill, which was discovered and extinguished. On Saturday the belt was again cut. A detective is now working on the case.

Thos. Ahearn, president of the Ottawa Car Co., says that negotiations with the Coventry Ordnance Works for the establishment of a factory near Ottawa for the manufacture of heavy guns, are well advanced. His partner, Mr. Soper, returned from England last Monday, where he had been conducting negotiations. The fact of the car company having made many gun and ambulance wagons for the Imperial authorities has encouraged them to embark upon the wider field. The Coventry con-

cern will establish itself in Canada only on condition of the Dominion Government giving a guarantee that all new guns required for the Canadian batteries will be obtained from their Canadian factory.

BUILDING NOTES.

Toronto colored Baptists are to build a $7,000 church.

J. Malcolm is to erect a $16,000 hotel at Claresholm, Sask.

Work on the new C.P.R. depot at Port Arthur will commence at once.

A large addition is being made to the New Ontario hotel at Fort William.

P. J. Manion is preparing plans to erect a $250,000 hotel at Fort William.

A new Presbyterian church is to be built on Reid avenue, Toronto, to cost $5,000.

W. Bentham, Montreal, is to build a large apartment house to be called the "Cavendish."

Christie & Phippen are erecting a block of one-storey stores at Winnipeg to cost $15,000.

Building operations at Port Arthur this week are expected to exceed the million dollar mark.

New buildings, etc., being erected at Weyburn, Sask., this year will total in value to $400,000.

Vancouver issued permits amounting to $296,000 in June as compared with $131,000 in June, 1905.

The Minnesota Threshing Machine Co. have decided to establish a distributing warehouse at Regina, Sask.

The Great Northern and Northern Pacific railways are talking of erecting a $750,000 hotel at Vancouver, B. C.

The valuation of new buildings put up at Craig, Sask., during the past three months is estimated at over $70,000.

The Bell Telephone Co. are to erect a $33,000 telephone exchange in Toronto and another at Kew Beach to cost $5,000.

Building permits in Fort William for this year amount to $260,000, not including the Canada Foundry Co's works, the Ogilvie elevator or the C.P.R.'s new freight sheds, which will total $1,000,000.

Residences are being built at Winnipeg as follows: For C. A. Baskerville, to cost $10,000; T. Collins, $4,800; J. J. Manley, $3.500; B. M. Fraser, $3,000; Johannson & Blondall, $4,000; C. S. McDonald, $3,600; Simmons & Tennerton, $5,000; John Thompson, $5,500; T. J. Hallgrimson, $3,000; Dr. J. M. Teney, $3.500; J. M. Johnston, $15,000; C. McKenzie, $4,000; W. P. Wallace, $5,500; H. P. Falls, $4,000; D. H. McLean, four houses, $8,000; G. Thomas, $4,000; W. A. Kemp, $3,000; D. A. Volume, $3,000; Mrs. Wade Forrson, three houses, $9,600; S. Bjornson, $3,500.

Boiler Beacons

By E. CONOMY.

Signal 4.—The Fire-Box

While all sorts of claims are made for the fire-boxes of all sorts of hot-water boilers, it seems but common sense to believe that the fire-box of one boiler can only be tangibly superior to the fire-box of another boiler by reason of greater depth, greater surface, for then, obviously, it enjoys the advantages that go with a deep body of fire.

These advantages are: 1, Small Consumption of Fuel; 2, Small Consumption of Attention; 3, Quick Distribution of Heated Water.

This Boiler leads them all.

The Fire-Box of the

"Economy"

Hot-Water Boiler

is unusually deep, besides it has radial arms and is corrugated all around the interior. That is why an "Economy" user has a dwarf coal bill and good eyesight. It's only now and then that he has to feed the fire and only now and —— —— then that he has to look at it.

If his memory should be off color and his "Economy" Boiler be neglected for, say, 24 hours, the fire would not go out for lack of fuel.

Naturally the question arises, "Of how many other hot-water boilers can the same be said?" and Echo answers Echo "None!"

☞ More "light" will follow.

WINNIPEG

THE CEMENT INDUSTRY

Manufacture of Portland and other Hydraulic Cements.

The revolution in engineering construction now going on, due to the increase in the use of cement, has been aptly compared to that following upon the general use of the Bessemer or open hearth process of making steel. In its importance to our present civilization, cement is surpassed among mineral products only by iron, coal and oil; in rate of increase in annual production during the last decade, even these three products cannot be compared with it. In 1890 the total production of Portland cement in the United States was 335,000 barrels, while in 1905 it exceeded 36 million barrels. In the latter year the total production of hydraulic cement, including Portland, natural rock, slag or fuzzolan varieties, exceeded forty million barrels, valued at over 36 million dollars. The development of the cement industry has been accompanied by the growth of various industries depending upon it, as, for example, the manufacture of concrete mixing machinery and concrete block machines.

Natural cements are produced by burning a clayey limestone, containing 15 to 40 per cent. of silica, alumina, and iron oxide, without preliminary mixing and grinding, at a temperature that is usually little, if any, above that of an ordinary lime-kiln. As the burned mass will not slake if water is poured upon it, it is necessary to grind it rather fine; after it is ground, if the resulting powder (natural cement) be mixed with water, it will harden or set rapidly, either in the air or under water. Satisfactory natural cement materials are widely distributed and of common occurrence. Hardly a state is entirely without limestones sufficiently clayey to be available for natural cement manufacture. The sudden rise of the American Portland cement industry, however, has acted to prevent any great expansion in the manufacture of natural cement. Natural cements vary widely in composition and consequently are of varying industrial importance. It has become customary to give to natural cements local geographical names, indicating the place of their manufacture, as the natural cements made in a given locality have the same general characteristics, being all made from the same sedimentary rock. The manufacturing methods at a natural cement plant are of the simplest kind, including merely the burning of the cement rock and the pulverizing of the product.

Slag cement is a by-product of the blast furnace and is made by intimately mixing granulated blast furnace slag of proper composition with slaked lime and reducing this mixture to a fine powder. The first step in the manufacture is the granulation of the molten slag, which is produced by bringing the slag into contact with cold water. The usual process is to allow the slag as it issues from the furnace to fall into a trough containing a rapidly flowing stream of water. The slag sand, as the granulated product is called, is next usually dried in a cylindrical drier. To 100 pounds of slag there is added from 20 to 40 pounds of lime, depending upon the composition of the slag. There is considerable difference in practice in regard to grinding and mixing the lime and slag. In some plants the two materials are ground together; in others they are ground separately and then mixed. Slag cement plants in this country produced in 1905, 382,447 barrels of cement.

The cement used by the Romans in their hydraulic masonry construction was made by mixing volcanic ashes with lime in the proper proportions. It may be noted that in origin materials of this class resemble closely the granulated slag used in slag cement manufacture, both volcanic ashes and granulated slag being due to the two processes of (1) fusion of a silico-aluminous material, and (2) rapid cooling of the resulting product by ejection into air or immersion in water. These volcanic or puzzolan cements are still made in countries where volcanic materials are plentiful.

The production of cement by mixing lime and clay in the proper proportions, calcining the mixture to a clinker at a temperature of incipient fusion, and then finely grinding the resulting product, is considerably less than a century old. This product was patented in England in 1824 by Joseph Aspdin, a Leeds' brickmaker, as an "artificial stone." It received its name from its similarity in appearance to the noted oolitic limestone from the Isle ol Portland. Aspdin mixed pulverized lime stone, taken from the public macadamized roads, with clay, by adding water enough to reduce it to a liquid form. This was then dried and burned "in a furnace similar to a lime-kiln till the carbonic acid is entirely expelled." The necessity of burning to a clinker was not given in the specification, and was probably not known at the time; neither was the proper proportion of clay mentioned. His success was, therefore, something of an accident, as was doubtless the discovery of the hydraulic property of the mixture itself.

Aspdin began manufacturing his cement at Wakefield in 1825. After the London Exhibition of 1851, at which many tests were made with the new material, its use soon became general in England.

Many failures marked the first thirty years of the Portland cement manufacture, because of entire neglect of the chemical analysis of the ingredients. Reliance was placed solely on the empirical knowledge of workmen ignorant of chemical science, and much sophistry and deception were used to cover up their failures. It is now known that good Portland cement can be made anywhere by properly combining, burning, and grinding a mixture of carbonate of lime and a suitable clay, the only elements of commercial success being economy and scientific direction.

There are three stages in the manufacture of Portland cement: (1) The grinding and intimate mixing of the raw materials, limestone and clay, in the proper proportions; (2) the burning of the mixture at the proper temperature, (3) after burning, the resulting clinkers must be finely ground.

The limestone used in cement manufacture occurs in two forms, either as solid rock or as marls, which are incoherent limestones that have been deposited in the basins of existing or extinct lakes. So far as chemical composition is concerned, marls are practically pure limestone. Physically, however, they differ greatly from the compact rocks which are commonly described as limestones, as they are granular, incoherent deposits.

In the preparation of the mixture for the kiln the raw materials must be reduced to a very fine powder and intimately mixed. The raw materials are usually crushed more or less finely, then mixed, and then ground to powder. Two general methods of treatment, the dry and the wet, are in use at different plants. Unless the limey constituent of the mixture is a marl, already full of water, the dry method is almost invariably followed. In this the materials are kept in as dry a condition as possible throughout the entire process of crushing and mixing, and if they originally contained a little moisture they are dried before being powdered and mixed. In the wet method, on the other hand, the materials are powdered and mixed while in a very fluid state, the mixture containing 60 per cent. or more of water.

With the exception of the marls and clays used in the wet method of manufacture, Portland cement materials are usually dried before the grinding is commenced, as they almost invariably carry appreciable, though often very small, percentages of water, which reduces the efficiency of the grinding mills and tends to clog the discharge screens. The type of drier commonly used is a cylinder approximately five feet in diameter and about forty feet in length, set at a slight inclination to the horizontal and rotating on bearings. The dried raw material falls from the lower end of the cylinder into an elevator boot and is then carried to the grinding mills.

The drying cylinder is heated either by a separate furnace or by waste gases from the cement kilns.

For dealing with high percentages of water, such as are encountered when marl is to be used in a dry process, double-heating driers are frequently used. In this drier a double cylinder is employed.

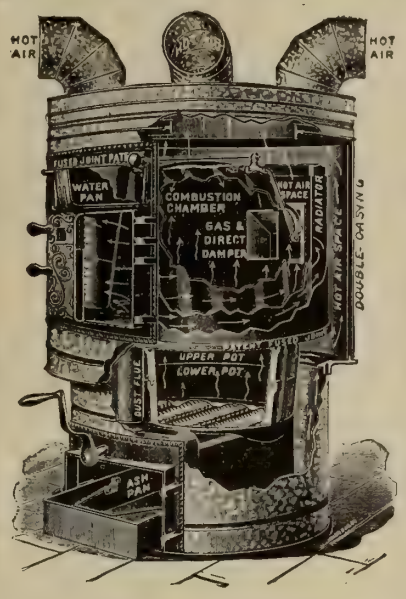
When the dry method is employed, after the two raw materials have been separately dried they may be mixed immediately, or each may be further reduced separately before mixing.

Wet methods of preparing Portland cement mixtures date back to the time when millstones and similar crude grinding contrivances were in use. With such imperfect machinery it was almost impossible to gring dry materials fine enough to give good Portland cement material. The advent of improved grinding machinery has practically driven out wet methods of manufacture, except with materials such as marls, which naturally carry a large percentage of water.

At the mill the clay is commonly reduced in a disintegrator or in edge-runner mills, after which the material is further reduced in a pug mill, sufficient water being here added to enable it to be pumped readily. It is then ready for mixture with the marl, which has been screened to remove stones, wood, etc. The slurry is further ground in pug mills or wet grinding mills of

the disk type, while the final reduction commonly takes place in wet tube mills.

After the cement mixture has been carefully prepared; it must be burned with equal care. With the exception of a very few of the older plants, which have retained vertical kilns, all American Portland cement plants are now equipped with rotary kilns.



The rotary kiln is a steel cylinder about 6 feet in diameter and, for dry materials, 60 or 80 feet long. For wet mixtures a kiln 80 to 100 feet long, or even longer, is frequently employed. This cylinder is set in a slightly inclined position, the inclination being approximately one-half inch to the foot. The kiln is lined except near the upper end, with fire brick, to withstand both the high temperature and the destructive action of the molten clinker. The intense heat first drives off the water and carbon dioxide from the mixture and then causes the lime, silica, alumina, and iron to combine chemically to form the partially fused mass known as "cement clinker." This clinker drops out of the lower end of the kiln, is cooled so as to prevent injury to the grinding machinery.

At the plant of the Great Northern Portland Cement Co., Marlborough, Michigan, which has a capacity of about 1,800 barrels per day, the marl is pumped up by a dredge and conveyed to the storage vats in 120-inch pipes, from which vats it is pumped into the mixing compartments. After the clay and marl have been thoroughly mixed the material is pumped to the grinding mills. After being thoroughly ground the mixture is then passed into storage vats from which it is pumped into the kilns. Here it is burned at a temperature of about 2,700 degrees F. for about two hours. The remaining clinker is carried by bucket conveyors to the clinker storage house and from there to the grinding machine by belt conveyors. From the grinding mills the cement is carried by belt conveyors to the packing and storage rooms.—Valve World.

A WONDERFUL LOCK.

Neuman Tobias, of Kingston, Jamaica, has invented a remarkable lock. The combination consists of four sets of 24 letters of the alphabet, which can be set to a sentence in most modern languages. When one letter is used in one alphabet and another in the second set and so on it becomes a very complicated matter indeed. Furthermore, instead of letters, the inventor has employed four sets of numerals. Assuming that the lock is set to a figure in the number of 3,030,303,030,303,030, it would take any one who undertook the job of unlocking the safe 96,090,278 years, 269 days, 30 minutes and 30 seconds, working at the rate of sixty numbers a minute, to arrive at the proper combination. During that time he would have no time for eating, drinking or sleeping.

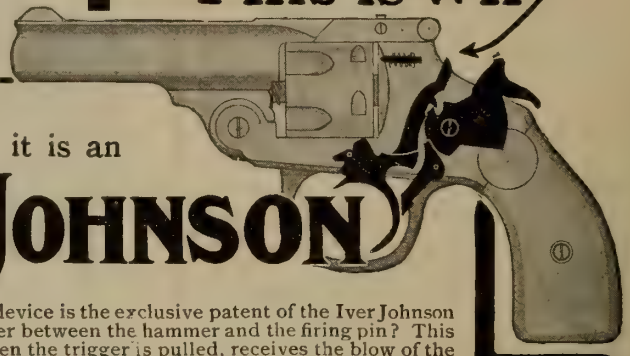
FISHING TACKLE A PROFITABLE LINE.



All merchants, no matter what line of business they are engaged in, know that it is not so much the amount of trade that they handle as the profit on their goods that will make them rich. As a corollary to this it may be stated that the more profitable a line of merchandise, the more difficult it is to handle successfully. Goods in which the competition is most keen must be sold on a close margin and consequently they bring the smallest margin of profit. Some goods must be sold close. Much of the stock in any store must be sold with little profit. For example, it would be hardly possible to conduct a hardware store without carrying a stock of nails, and it also would be impossible to sell these goods to large buyers—to contractors or to builders—anywhere in the east, at a profit large enough to pay the running expenses of the store. Now, this being the case, the wise merchant is the one who is constantly on the lookout for any line which pays a good profit, and at the same time will find a ready sale. The sporting goods and hardware dealers must also realize that each year their fields are being encroached upon by dealers in other lines—the modern house, the general store, the department store, and in some cases the competition is making itself felt from the jobbers in nearby towns. The dealer, therefore, must make an effort not only to hold his present trade, but to take advantage of changing conditions.

"How to enlarge my profits without noticeably increasing my expenses?" This is a question that nearly every thoughtful merchant is asking himself, and this best can be accomplished by gradually adding profit-making lines to his business. One such line is fishing tackle. In the hardware business no branch pays a better profit that sporting goods, and nothing in sporting goods can be made as profitable as fishing tackle. This branch of the business has great possibilities. The trade is only in its infancy. Each year the ranks of the old enthusiasts are being added to by a large number of boys and young men, who are for the first time taking up the sport of fishing. Unlike many other outdoor sports or games, fishing is not a fad. A man who has once been a fisherman always remains so. Another reason for an increase of these goods is because good fishing each year is made more possible. The millions of fish that are being planted every year by the Government is having its effect now in making it more easy for a sportsman to find a place to use his tackle. A few years ago if a man was run down from overwork or worry, his physician would recommend a sea voyage. To-day he would be told to take a trip in the woods—to spend a few weeks camping, and this is giving men an opportunity to find the rare sport in fishing and is consequently making an increased and large demand for the goods.

Men are buyers of fishing tackle and men are customers of the sporting goods and hardware stores—consequently it is these dealers who can best handle this line of goods, and it is the most natural place for the sportsman to look for his tackle. It is also true that the larger assortment of fishing tackle and better display of fishing tackle that is made, the greater amount that will be sold. It is possible for a boy with a 5-cent line and a pin fish hook to catch fish. Every man realizes this; also he realizes that the best sport can be had not in the number of fish that he gets as much as going after them and preparing for the trip. So it is that the better display that is made the more goods will be sold, as fishing tackle more than almost any other line of merchandise is largely purchased because the fisherman thinks that with it he will have better sport. If it appeals to the eye it will find a sale, and it can not appeal to the eye unless it is well displayed. In putting in the line of fishing tackle it is of great importance to start right — to have the goods that are best adapted to local trade. A dealer being located in a country where most of the fish are trout would be very foolish to put in a stock of heavy bass or salt water tackle. It would not sell and he would soon become discouraged with the trade. It is, therefore, of great importance not only to have a well assorted line, but to have one that is made up of goods that are used in the locality in which the dealer is. Also, in putting in a new line of fishing tackle, like any other class of merchandise, it is of great importance to have the goods at the right prices. Therefore, the line should be purchased of a manufacturer who would be able to put the dealer in a position to meet any competition and yet the dealer should not over-buy. Fishing tackle being seasonable goods, the stock should be kept fresh. Each year new articles are brought out and, therefore, the stock should be purchased with care.—Sporting Goods Dealer.

Accidental Discharge Impossible—

This is why

True only if it is an

IVER JOHNSON

The positive safety device is the exclusive patent of the Iver Johnson Revolver. See the lever between the hammer and the firing pin? This lever is raised only when the trigger is pulled, receives the blow of the hammer and transmits it to the firing pin. **That's why** you can throw a loaded Iver Johnson against a stone wall without fear—no discharge can possibly follow, as the hammer **never** touches the firing pin. An Iver Johnson never fails when you **pull the trigger** and never "goes off" when you don't.

ABRASIVE MATERIALS.

The United States Geological Survey is about to publish its annual report on the production of abrasive materials during 1905. The report takes note only of that small part of the production of these materials which is actually used for abrasive purposes.

The aggregate value of the production of the natural abrasive materials during 1905 was $1,427,780, which is an increase of $20,679, as compared with $1,407,101, the value of the 1904 production. This includes oilstones and scythestones at $244,346, grindstones and pulpstones at $777,606, buhrstones and millstones at $37,974, pumice at $5,540, infusorial earth and tripoli at $64,637, crystalline quartz, including feldspar, at $88,418, garnet at $148,095, and corundum and emery at $61,464.

The value of the artificial abrasive materials—such as carborundum, crushed steel, and alundum—manufactured during 1905 is estimated at $701,400, as compared with the estimated value of $830,926 of the 1904 production, a decrease of $129,526. This, however, is a large increase as compared with $493,815 in 1903 and with $390,245 in 1902.

PREFERRED CREDITOR DEFINED.

Willie—Pa, what is a "preferred creditor?"

Pa—A preferred creditor, my son, is one who doesn't care whether you pay him back or not.—Philadelphia Ledger.

PLUMBING AND STEAMFITTING

SOME PUMP AND ENGINE IMPROVEMENTS.

FIGURE 1 represents a combined air and circulating pump on which we made an improvement in the crosshead. As originally designed, the steam and water pistons were connected by a continuous rod and the crosshead was slipped over this rod and held in place by a set-screw. This crosshead would slip on the rod sometimes, but if you wanted to take it off, a 10-pound sledge hammer would not persuade it to slip. The half of the rod between the crosshead and the water piston had to be renewed every once in a while, as the circulating end of the pump gets more or less sand. The cylinder heads (D) and (E) are cast solid with the frame of the pump, so they cannot be removed, and in order to renew the crosshead or the

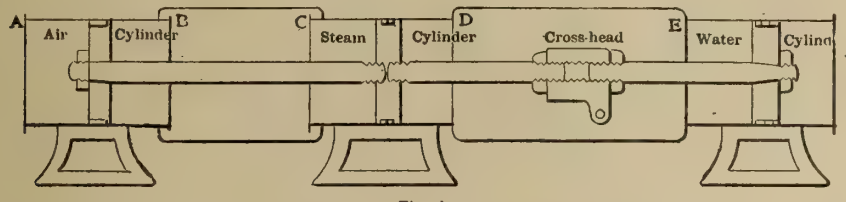

Fig. I.

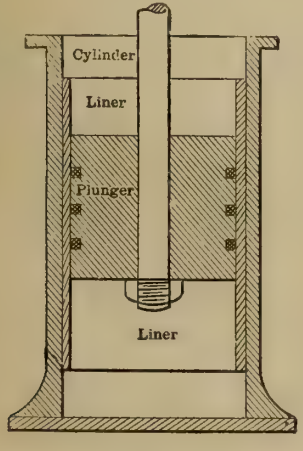

Fig. II.

rod it was necessary to take off the heads (A) and (B), then remove the water piston and slide the air and steam pistons out of their cylinders, loosen the lock-nut on the water piston rod and then unscrew the rod out of the steam piston. By substituting the crosshead here shown for the old one and cutting the rod in two all this trouble was eliminated. The rods being screwed in and held by lock-nuts, there is no chance for the crosshead to slip, and each rod is independent of its neighbor. There is quite a saving of brass also in a year's run, as the steam rod can be made of steel. Care should be taken that the nuts do not strike the glands, which will occur if the crosshead is made too long.

Fig. 2 shows an improvement that was made to a vertical duplex pump. The sketch shows a cross-section of the cylinder of the water end, its brass liner and brass plunger. In this type of pump the builders intend the solid brass plunger to run unpacked in the brass liner. That is all right as long as there is no wear, but I have yet to see one that does not wear. Of course they can be renewed, but brass is no cheaper in this part of the country than elsewhere; so we hit upon the following scheme to cut this expense down:

Grooves similar to the packing-ring grooves of a piston are turned in the plunger 5-8 inch wide and a little less than 5-8 inch deep, depending on how much the plunger is worn. We insert 5-8 inch hydraulic packing in these grooves, put the plunger in the cylinder and connect the rods together, and we know the pump will work at its rated capacity for three months.

If the reader is thinking of fixing a pump up like this, however, he must not get too industrious and try to cover the whole length of the plunger with grooves. We tried that and at the first stroke the pump made the lower end of the plunger went below the end of the liner, as the builders intended it should, and the end rings of packing came about half way out, and when the plunger started up it went about an inch and stopped. It took three jack-screws to get the plunger out and after that we put packing around the central part of the plunger only.

Fig. 3 shows how a broken bonnet was repaired. The collar on the end of the dash-pot plunger had a habit of working off, and this of course makes the dash-pot rod too long. It is possible to braze some small bonnets, but on the larger ones it does not seem to work. These bonnets usually break at the point marked (X), and generally do no other damage, although once in a while a stem will be bent. The bonnet was bored out and the sleeve was made and pressed in. The end of the sleeve was threaded and the round nut (N) was screwed on by means of a punch, and the holes drilled in the circumference of the nut. A collar (C) was shrunk on the end of bonnet

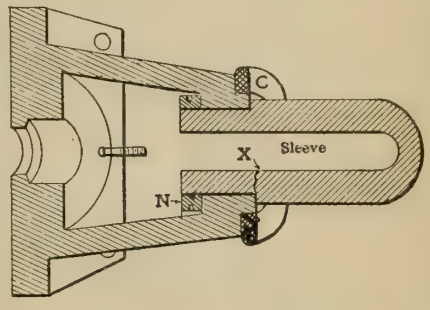

Fig. III.

to keep it from splitting when the sleeve was pressed in.

Fig. 4 shows how we ended our dash-pot troubles. The collar (K) would work off the plunger and make dash-pot rod too long. The screw (B) was supposed to hold a small threaded section tight enough to keep the collar from turning, but it did not do so. A hole was drilled through the collar at (A) and about 3-4 inch into the plunger at (D).

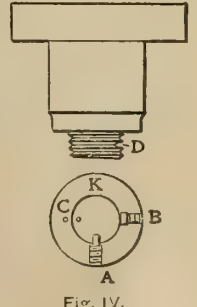

Fig. IV.

The holes in the collar are tapped out, the larger ones for 5-8 inch and the smaller for 1-2 inch screws. We used steel screws with the ends turned off to enter the hole (D). The other end is slotted for a screw-driver. The bottom of the plunger and the collar are marked with a centre punch, as at (C), so as to

show when the holes are in alignment. The set-screw (A) cannot get out because the collar is surrounded by the wall of the dash-pot. It is also certain that the collar will not turn with 3-4 inch of screw in the hole (D). This collar has only one position on the plunger, so that if one leather is not as thick as the one we had on when the hole (D) was drilled, we make up the difference with a piece of thick paper.—"Practical," in Power.

FINANCIAL CONDITION OF THE PLUMBERS.

In Contrast to that of Men in Other Walks of Life Who do not Possess Technical Knowledge.

By John E. Dugan, Albany, N.Y.

It is an old saying and a just one that "a laborer is worthy of his hire," but at no time in the history of the world, or, to be more accurate, in so far as we have any knowledge, has this truism been applied in human industry. Certainly here and there we find exceptions to this as we do to every other rule, but generally speaking, the industry of man has ever lacked its just reward, of course financially speaking, for it is true that there are other rewards, one of which, for instance, and perhaps after all the most satisfactory, is that which tells one that to his own satisfaction he has performed worthy labor and through that service has contributed to the aggregate good of humanity and to the material progress of civilization, the benefits of which will redound to his and unborn generations, and in which his children and their children will, to a greater or less extent, participate. There was never meritorious work performed which did not shower its blessings upon someone, at some time, somewhere, though it may be that the author suffered in the performance.

Man's Gradual Progress.

From the remotest period of time down through the ages we note the gradual progress of man. We observe a steady evolution from a lower to a higher plane of development and at all times and under all circumstances it has been a bitter struggle; sometimes against the destructive elements of nature and at others against human oppression, and often perchance against both. Notwithstanding, at no time has the spark of ambition been annihilated, for supported by the instinct of self-preservation and the inborn hope of the human breast, it has soared upward and onward until to-day with all the shortcomings and injustices we may well feel proud of those generations of forefathers who struggled and suffered and long since passed to eternal and well-earned rest, that we might enjoy the blessings common to the times and which are, more or less, accessible to a large proportion of the multitude.

The most beautiful structures of ancient and modern times, perfect examples of strength, symmetry and refinement; the greatest productions from the brush of artistic man, so true to nature that the difference is barely discernible; the most intricate and wonderful mechanism of the ages as well as all other wonderful productions, save possibly those inherent in nature herself, are all the result of human labor applied to the earth's resources. And although these wonderful buildings, paintings and machinery have conferred no end of pleasure and benefit upon mankind, yet is it not true that the men engaged in their production have as a rule suffered for the common necessaries of life? Indeed, were not many of our ancient structures erected by slave labor, pure and simple? Again, are not our modern productions erected by an underpaid army of wage workers? And admitting this to be so, is it not slavery only in other form?

Technical Knowledge Unpaid.

With few exceptions, men of technical knowledge seldom derive more than a living from their labor and more rarely acquire a competency for that period of life which as an ever-present spectre constantly stares one in the face, namely, old age. On the other hand, we observe men possessed of no technical or other knowledge of real value to the world's progress, yet able to accumulate vast fortunes. Individuals who seem to render no service to their fellow men, unless speculation may be called service—speculation upon the labor and misery of others and for the avowed purpose of filching all.

And so, while it seems true that most men of technical knowledge are in about the same predicament, we at this moment have to do with plumbing particularly, but it is well to hesitate in our consideration of the subject and learn that we are not alone. There is some consolation in knowing that there are others; that it is a condition which we have inherited from the ages long since passed into history; that every age demonstrates an improvement, and that by our agitation and determination, assisted by others similarly imposed upon, we are bound to leave better conditions than we found; and perhaps in due course of time the labor of many will be remunerated in accordance to its value to humanity, and not be measured by the whims and impositions of an unjust age of industrial darkness and commercial slavery.

Importance of the Plumber.

Of vast importance to the world is the plumber. Except to himself, however, this importance was unknown until recent years. Indeed, he kept his importance to himself and from his fellow competitor, and so under such circumstances it is not to be wondered at that he found little or no appreciation on the part of his fellow men, for they had their part to play in the drama of life and had little time to stop in the midst of their struggle to discover the merits of such men as were in hiding. Being of a docile disposition, and seemingly of no great public importance, it was only natural to expect that his service would be undervalued. Service is largely measured by one's own standard. As we respect ourselves, so may we to the same extent anticipate the respect of others, and for the same reason if we are to be valued by others we must place a value upon ourselves.

That a value is being placed upon our service by the public goes without saying, and we can modestly claim some credit for this result. From the moment that we began to unite as a body for the purpose of helping one another we placed a value upon our craft never before appreciated. That was the beginning of the end of both craft and public prejudice. A new disposition was born and year by year since that awakening we have seen our craft and its calling increase in public estimation. The revolution which has taken place in the modern scientific world, as regards the germ of theory of disease, and the recognition of the close alliance thereto of sanitary plumbing as a preventative of its spread, has added to the value of our profession and for this result we must give much credit to the scientists and physicians. The great advancement made as regards the character of the fixtures of the trade due to the inventive genius of men in and out of the craft has had its effect in the growth of public sentiment. The press, trade and otherwise, in whose columns have appeared, for some years back, the thoughts and opinions of our foremost sanitarians on the subject of plumbing and its importance to the public health has performed its share in the work of education, and so one might go on indefinitely, but it seems unnecessary, for I am sure you have thought along these lines and entertain similar opinions.

Business Knowledge Necessary.

Our financial condition as a trade will become more favorable in proportion as we progress and are appreciated. We must, through our organization, endeavor to keep up the work of education, perfecting ourselves and never cease working for the public good. We must leave nothing undone which will aid in the elevation of our profession in the public eye. We must seek to become business men as well as artisans. Technical knowledge is not all, as many of us have long since discovered. We must perfect ourselves in commercial knowledge, and in the education of our apprentices we must instil this important knowledge, together with the spirit of the golden rule, for while we desire to be justly dealt

with. We have a similar obligation to our fellow men and we cannot hope long for a general appreciation unless we engage in the world movement for the betterment of society. In other words, we must be citizens as well as plumbers, cognizant of our rights and willing to perform our duties as we see them. As a rule, I firmly believe that we now compare favorably with the most advanced of all other crafts and that we will continue to keep pace with them. But this is not sufficient. We must strive to excel and to the degree that we excel will we be valued.

With a more substantial organization seeking each other's welfare, and a more general participation as citizens in the world's movement for an equitable distribution of opportunity and the productions of labor, I see no reason to doubt that the time must come when men possessed of technical knowledge, be they plumbers or others, shall participate to a greater extent in the wealth of the world, assuming, of course, always, that they render a service in return. Perhaps in those days there may be fewer millionaire plumbers (?), but if there are fewer poor ones, which condition seems to prevail quite generally at the present time, we would feel much gratified at the change for the better.

The laborer is truly worthy of his hire no more, no less. Were this principle applied to modern industrialism there would be few millionaires to be sure, but then we would have little or no poverty and what a blessing that would be to not only ourselves but all mankind; what an heritage to bequeath posterity, plumbers and all other workers in the harvest fields of this brief existence so dear to us all, and which we call life.

TORONTO'S CIVIC INVESTIGATION

The search for scandal with Judge Winchester's "muck rake" has practically been concluded, the judge making his report to the city council on Monday last. The report dealt with various subjects, and was very severe on ex-Ald. Dr. Lynd and Architect Lennox, both of whom it contended were clearly guilty of accepting bribes.

City Hall Plumbing.

After referring at some length to the various Lennox accounts, aggregating $3,158.43, written off by Bennett & Wright, the report said: "In the Bennett & Wright contract the evidence shows that the city was charged with much larger sums than those which appear in the Bennett & Wright books of original entry for such extras, and that the greater number of these increased charges are allowed by Architect Lennox. Two or three items in this account are exceptionally large."

Judge Winchester says that S. S. Clarke, of the Bennett & Wright Co., paid $1,000 to Worthington, Garrett, & Armstrong, and $2,000 to Purdy & Mansell, in connection with city hall contracts. "It was found impossible," continues the report, "to follow up this line of inquiry successfully in the absence of S. S. Clarke. I find that while I am unable from the evidence so far produced before me to find that there was such a combination as to bring the parties within the criminal code, yet in my opinion their actions prevented the city from obtaining honest and fair tendering, and that such actions were against public policy, and that the firm of Bennett & Wright obtained an advantage over the city of at least $3,000 by such actions. Their large profits, $50,000 or $60,000, as stated by Mr. Lennox, on such a large contract would enable them to pay a much greater sum than that named to secure the contract, and this was undoubtedly done.

"The cash books of Bennett & Wright for the years 1896, 1897, 1898, 1899 and 1901, and the cheques and cheque stubs for 1896, etc., are missing. In consequence of this, I have been unable to obtain evidence respecting payments which were made by the Bennett & Wright Co. in connection with their contracts on the city hall during this period. That there were such payments made is shown by the fact that Mr. Mansell received the sum of $3,000, as already mentioned. I therefore desire to keep this part of the investigation open until such time as these books can be recovered, and Mr. Clarke and other witnesses that may be necessary can be examined in connection therewith and with the evidence already given."

Metal Roofing.

"I find from the evidence with reference to the St. Lawrence Market that the two contracts for roofing were obtained by fraud through the combination of competitors: the successful tenderer paying the others the sums mentioned, namely, $2,205 and $1,000, respectively, and compelling the city to pay same by adding that amount to their respective tenders.

"The architects, Mr. Siddall and Beaumont Jarvis, were paid between $200 and $300 each by the contractors, Douglas Brothers, when this contract was being performed, and that they most improperly received such sums, although they state that such payments were not made for an improper purpose. The receipts of these payments, however, vitiated all certificates issued or orders given by them to these contractors in connection with the building in question.

"I found upon the evidence that this contract was obtained by the Metallic Roofing Co. from the city by fraud, in consequence of which the city paid the sum of $2,205 without receiving any consideration therefore.

"In my opinion the sum of $850 was added to the Manufacturers' Building tender of the Metal Shingle & Siding Co. in addition to their profits, and was paid by the city to that company without any consideration."

STRIKE AT WINNIPEG.

Winnipeg plumbers and fitters are on strike over a disagreement with the bosses on a new wage schedule. Twenty of the smaller shops, employing one or two men each, have signed the agreement with the union, but at the time of writing the larger employers were refusing to grant the advance in wages asked for.

PLUMBING MARKETS

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, July 13, 1906.

Lead products furnish the only price changes of the week, and it is a peculiar thing that, while solder shows another decline, the discount on lead pipe has changed so as to increase the price. From 20 to 15 per cent. represents the fluctuation in this line. Solder has declined a half-cent in both grades.

Aside from these fluctuations prices have continued firm. Big business is being done in nearly every branch of the plumbing supply trade.

RANGE BOILERS—A steady trade is being done by the supply houses here. We are quoting as follows: Iron clad, 30 gal., $5; 40 gal., $6.50 net list; copper, 40 gallon, $22.50; 35 gallon, $27; 40 gallon, $30.75 net.

LEAD PIPE—Despite a sagging condition in pig lead, quotations on pipe have advanced and we are now giving a discount 5 per cent. lower. Ruling discounts are now quoted as follows: 15 per cent., f.o.b., Montreal, Toronto, St. John, N. B., Halifax; f.o.b., London, 15c. per hundred lbs. extra; f.o.b. Hamilton, 10c. per hundred lbs. extra.

IRON PIPE FITTINGS—Business is still brisk, and quotations are unchanged. We still give discounts on all sizes of nipples up to 6-inch, 67½ to 70 per cent.

IRON PIPE—Dealers continue to wonder at the fact that prices have not advanced. Conditions on the Montreal market are very firm, and there is no talk of cutting. We are still quoting: Standard pipe in lots of 100 ft., regular lengths, 1-4 inch, $5.50; 3-8 inch, $5.50; 1-2 inch, $8.50; 3-4 inch, $11.50; 1 inch, $16.50; 1 1-4 inches, $22.50; 1 1-2 inches, $27; 2 inches, $36.50; discounts on black pipe, 1-4 inch, 62 per cent.; 3-8 inch, 62 per cent.; 1-2 inch, 71 1-2 per cent.; 3-4 inch and upwards, 73 1-2 per cent. Discounts on galvanized pipe: 1-4 inch, 47 per cent.; 3-8 inch, 47 per cent.; 1-2 inch, 61 1-2 per cent.; 3-4 inch and upwards, 63 1-2 per cent. Extra heavy pipe of 100 feet lots are quoted as follows: 1-2 inch, $12; 3-4 inch, $15; 1 inch, $22; 1 1-4 inches, $30; 1 1-2 inches, $36; 2 inches, $50. The discount for black pipe is 71 per cent., and for galvanized, 61 per cent.

SOIL PIPE AND FITTINGS — The trade has a very healthy tone. We still quote the following discounts: Standard soil pipe, 50 per cent. off list. Standard fittings, 50 and 10 per cent. off list; medium and extra heavy soil pipe, 60 per cent. off. Fittings, 60 per cent. off.

SOLDER—Another decline in the price of both half-and-half and wiping solder is the direct result of a further falling off in pig lead and ingot tin. We are now quoting: Bar solder, half-and-half

guaranteed, 23½c. ; No. 2, wiping solder, 19c.

ENAMELWARE — Current prices are as follows : Canadian bath tubs, plate E1, 5 feet, 1st quality, $20.65, special $18.65; plate E11 and E21, 5 feet, 1st quality, $19.50, special $17.15; plate E35, 5 feet, 1st quality, $24.65, special $22.40. American baths, rolled rim, 5 feet 2 1-2 inch rim, $22.25; 3 inch rim, $29.25. Lavatories, discounts, 1st quality, 30 to 30 and 5 per cent.; special, 30 and 10 to 40 per cent. Sinks, 18 x 30 inch, flat rim, 1st quality, $2.60, special $2.45.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, July 13, 1906.

A steady market with no price changes is the report this week. Lead pipe is held firm at last week's advance and solder is unchanged from former figures. Pipe and fittings are steady a good business is being done in these lines.

Business in plumbing supplies continues brisk. Enamelware manufacturers are doing their utmost to keep up with their orders, but even with the large increase in producing capacity made this year they are having difficulty in keeping up with the enormous demand. Heating goods are selling in fair quantities for this season.

LEAD PIPE—Prices are firm following last week's advance. We quote: Lead pipe, 8c., discount 15 per cent.

SOIL PIPE AND FITTINGS — Our quotations are as follows : Medium and extra heavy pipe and fittings, 60 per cent. ; 7 and 8 inch pipe, 40 and 5 per cent.

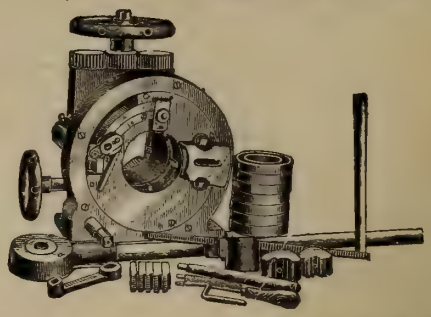
IRON PIPE — A steady business is being done. We quote as follows : Black, 1 in. pipe, $4.37 ; galvanized, 1 in. pipe, $6.02. See current market quotations for other sizes.

IRON PIPE FITTINGS — We quote as follows: Cast iron elbows, tees, crosses, etc., 67½ per cent. ; cast iron plugs and bushings, 67½ per cent. ; flange unions, 65 per cent. ; nipples, 75 and 5 per cent. ; iron cocks, 60 per cent. ; Canadian malleable, 35 per cent. ; American malleable, 25 per cent. ; malleable unions, 65 per cent. ; malleable bushings and plugs, 60 and 10 per cent. ; C. I. ceiling plates, plain or N. P., 70 per cent. ; C. I. floor, 80 per cent. ; hook-plates, 65 per cent. ; expansion plates, 65 per cent. ; headers or branch tees, 65½ per cent. ; ring hangers, black or galvanized, 70 per cent., American list.

GALVANIZED IRON RANGE BOILERS—We quote : 12 gallon capacity, standard, $4.50 ; extra heavy, $6.50 ; 18 gallon, standard, $4.75 ; extra heavy, $6.75 ; 24 gallon, standard, $4.75 ; extra heavy, $6.75 ; 30 gallon, standard, $4.75 ; extra heavy, $7.50 ; 35 gallon, standard, $5.75 ; extra heavy, $8.50 ; 40 gallon, standard, $6.75 ; 40 gallon, extra heavy, $9.50 ; 52 gallon, $11 ; extra heavy, $14 ; 66 gallon, standard, $18 ; extra heavy, $20 ; 82 gallon, standard, $21 ; extra heavy, $24 ; 100 gallon, standard, $29 ; extra heavy, $34; 120 gallon, standard, $34 ; extra heavy, $40 ; 144 gallon, standard, $47 ; extra heavy, $55. The discount on copper and range boilers continues at 15 per cent.

RADIATORS—Business is satisfactory for this season. We quote: Hot water, 50 and 2 1-2 per cent.; steam, 50 and 5 per cent.; wall radiators, 50 per cent.

SOLDER — Prices are unchanged. We quote : Bar solder, half-and-half, guaranteed, 24c. to 25c. ; wiping, 22c.



ENAMELWARE — We quote as follows : Plate E1, 5 feet, first quality, $20.65, special $18.65 ; plate E11, 5 feet, first quality, $19.15, special $17.15 ; plate E21, 5 feet, first quality, $19.15, special $17.15 ; plate E35, 5 feet, first quality, $24.65, special $22.40. Fittings extra.

PLUMBING IN FARM DISTRICTS.

A. Vance Cline, plumber, Grimsby, was a caller at the Toronto office of Hardware and Metal last meek. Mr. Cline states that during the past year he has done a business amounting to over $16,000—a pretty good report for a town without a waterworks system. Over half of his plumbing jobs were for systems to be installed in farm houses and practically all his heating contracts were secured from farmers. A waterworks system is to be installed at Grimsby, so there is plenty of work in sight for some time.

F. R. J. McPherson, plumber, Peterboro, was a visitor in Toronto this week.

A Certain Sense of Satisfaction

goes with every MERRELL PORTABLE HAND MACHINE, PIPE THREADING and CUTTING MACHINE. We build them that way.

For doing ALL kinds of threading—under ALL conditions—labor trouble and faulty material included—where speed, durability and ease of control count for something, our word to you is to investigate the MERRELL.

Whether it be stationary or portable—hand or power driven—30 DAYS FREE TRIAL must prove conclusively that your choice should be the MERRELL.

This Portable Hand Machine has encased gears, MERRELL standard quick opening and closing die-head, and the latest improved Cutting-off Knife.

Let us tell you more about this machine—The Chasers, Vise and the large range of work covered.

Those Peculiar Oxford Grate-Bars— Help Sell the Oxford Boiler for You

The hollow, triangular Oxford grate-bars make a big point for the man who is selling the boiler.

It's so plain to be seen that such a grate-bar must save fuel,—and money. Plain, too, it must save bother—and money.

When one of these bars needs to be replaced, it's two minutes work to take that bar out—and it isn't necessary to touch any other bar in taking out the one.

Independent grate-bars, that burn fuel with real economy, and that work on a positive gear **EASILY** so that they can't get clogged nor jam and break———

That's just **ONE** selling point about

The Oxford Hot Water Boiler

There's eleven other points to it, and every one of them means easier selling for you, and more profit and reputation. Why wouldn't it be as well for you to ask us questions about our proposition to really **LIVE** dealers? And do that right **NOW**?

"I Remember, I Remember
The Sifter Old and Scarred."

The poet here sings of that ancient and troublesome body the Wooden Sifters.

If the poet had used the

METALLIC ASH-SIFTER

he would have sung in a joyous vein. He couldn't get the "Metallic" in those days but he can get it to-day.

Would you be angry if we sent you a Circular?

C. M. CUTTS & CO.

SOLE MAKERS

TORONTO JCT., ONT.

MIGHT and RIGHT

Want ads appearing between the covers of

Hardware and Metal

are read by the RIGHT people and ACTED on.

Want to sell. Want to buy. It makes no difference which. An expenditure of 25 or 50 cents in **Hardware and Metal** want columns will produce the desired result.

Rates 2c. per word, first insertion.
" 1c. " each subsequent insertion.

STAY-ON

Horse Blankets

The difficulty with most Horse Blankets is that no matter how you attach them to the horse, they will work off In the special make of our **STAY-ON BLANKETS** this difficulty is overcome. We have spent labor and money to perfect all kinds of horse clothing, and we are pleased to demonstrate to all the advantages derived from the use of our specialties. You pay no more for our goods than you do for inferior qualities.

saw.

DISSTON'S ST. LAWRENCE

Toledo blade, ground 4 gauges thinner on back than on teeth. Very best quality spring steel.
The fastest cutting saw in the world.

Are things running as nicely as they used to, or do you find "times hard" and nothing doing in the line of good profits and quick sales ?

It's not the fault of the "times," they were never better in the history of the country ; it must be the business. Something in the internal arrangement has gone wrong. Business is feeling sick and can't digest the line of saw-stuff you are feeding it on. Change the diet ; feed it on **Disston's Cross Cut Saws** for a few months, and watch the change. It will pick up, regain some of its original strength and look brighter than it has done for years.

Disston's Saws and Our Prices make a health food that any weak business can thrive on.

Write us to-day. Your business has been paying your expenses for years, and you should retaliate now by doing everything in your power to help it out of its present difficulties, especially when "everything" means only writing us for prices. Once you get the prices, you also get the medicine.

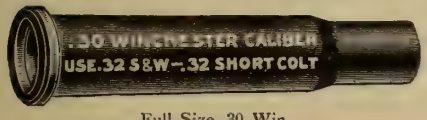
A trial order will convince you of the superiority of the "Maple Leaf" Harvest Tools.

The Maple Leaf Harvest Tool Co., Limited

TILLSONBURG, ONT.

WINCHESTER



Model 1886 **Winchester** repeating rifle is one of the strongest made and one that will successfully withstand the shock and strain of shooting such tremendous charges of powder and lead as are contained in .45-70-405 and other big cartridges. This model is very popular with big game hunters all over the world on account of its strength, accuracy and great killing qualities. This gun has been tested on all kinds of game, and has invariably given such splendid satisfaction that it is doubtful if it will ever be equalled for the heavy cartridges it was designed to handle.

We keep it in stock in a great variety of calibres from .33 to .45-70-405.

It is only **one** of **40** different **Winchester** rifles in our stock made to suit every taste and adapted to every use.

Is it not best to buy where you find the variety to select from ?

WINCHESTER SUPPLEMENTAL CHAMBERS

Full Size .30 Win.

Sectional View.

Made from solid steel, nickel-plated. Exact size of high powered cartridges, but chambered for smaller pistol and revolver sizes. Will retail at 75c. or less.

The **Winchester** Supplemental Chambers are new and are designed to adapt pistol and revolver cartridges for use in rifles of high power. The only change necessary is the adjustment of the sights. The rifle can then be used for short range shooting or indoor target practice. It is thus an aid to attaining proficiency in the use of a regular hunting rifle at a minimum expenditure for ammunition. Made in eight rifle sizes.

The **Winchester** Supplemental Chambers are selling. Their price is low. Will you not add them to your stock ?

Our "**Sporting and Fall Goods**" catalogue contains 88 pages of goods you will sell in the Fall and Winter. A copy for the asking.

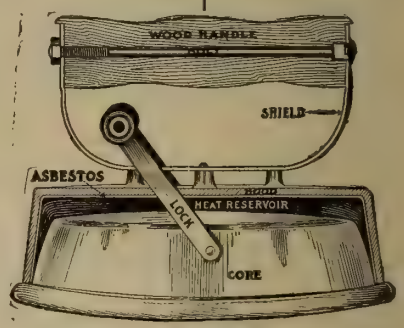
1809 HARDWARE AND IRON MERCHANTS, 1906



MONTREAL, CANADA.

ASBESTOS SAD IRONS

AN IRON FOR EVERY PURPOSE

HOT WEATHER BULLETIN

¶ Ironing is pretty tough on the women in the hot days of summer. ¶ And it is an instance of the Irony of Fate that, when ironing is most fatiguing, there's just so much more of it. ¶ White dresses, shirts and shirtwaists, underclothes, and a host of other summer garments—how often they must be ironed! ¶ Do you know that the features of Asbestos Sad Irons appeal more to women in the summer than at any other time? ¶ If only your salespeople would show up these features earnestly and intelligently to the perspiring women who iron, we know that the result would be what you want most of all—sales! ¶ Let us send your clerks some pointers. ¶ We wish to mention merely a few of the hot weather features of Asbestos Sad Irons: ¶ 1st. The handle is always cool and comfortable because of the asbestos-lined hood with its dead air space. Heat cannot get to the handle either by conduction or radiation. ¶ 2nd. The "Asbestos" retains heat longer than ordinary irons. When it has once been thoroughly heated, the fire can be "checked," thereby reducing the temperature of the room. ¶ 3rd. Frequent trips to the stove are unnecessary, so that the stove can be in one room and the ironing done in another. ¶ Just consider the advisability of making Asbestos Sad Irons a hot weather special. ¶ Ask your jobber about our Free Display Stand proposition.

Why is the *Marlin* Repeating Shotgun, Model No. 17, the best low-priced repeating shotgun in the world?

By making this gun with a solid frame and a straight grip stock a number of parts have been eliminated. The result is a stronger, simpler, cleaner gun than any other repeating model and a very much less costly one.

The exclusively *Marlin* solid top and side ejection are features of Model 17 and to these famous *Marlin* ideas are added the new double extractor and a two-piece safety recoil block—devices which repeating shotgun users will welcome.

The *Marlin* breech block and working parts are *cut* from solid drop forgings. The barrel of special rolled steel is bored for both smokeless powder and black. The guaranteed *Marlin* pattern of 325 pellets with 1¼ oz. No. 8 shot in a 30 in. circle at 40 yards is maintained in Model 17.

When the ducks come rushing in among the decoys or the grouse roar off through the dead leaves you cannot be armed with a better, quicker, harder-hitting gun than the *Marlin* Model 17.

It is a first-class quail gun. For woodcock, snipe, prairie chickens, sharp tail grouse or any other bird shooting it is unsurpassed.

Its records at the traps are wonderful.

TO ALL DEALERS HANDLING FIREARMS:

The above is one of seven advertisements to be used by the Marlin Company in their 1906 advertising campaign. These advertisements will be inserted in a list of magazines selected for their QUALITY, known to be bought and read by a class of people financially able to buy Marlin repeaters and having a total guaranteed circulation per month of 5,000,000. Estimating five readers to a magazine, this will give a total, for seven months, of 25,000,000.

In addition, Marlin goods are advertised in farm papers, hardware papers, sporting goods papers and in many miscellaneous publications.

In our advertisements we ask for six cents in postage stamps. This means that a person must furnish paper and envelope, a two-cent stamp for mailing, include six cents and take the time and trouble necessary to write us a letter. Our object is to cut out catalog collectors, young boys and girls and people who are not interested enough to invest ten cents and the time and trouble necessary.

We reason that if a person is interested enough to do this, it is worth our while to go after him seriously and earnestly, and on all inquirers answering these advertisements and spending ten cents on us, we spend more than twenty cents.

We send each and every one a 136-page catalog illustrated with hundreds of engravings, having a beautiful cover in colors and containing a large amount of general information interesting and instructive to all shooters whether they use Marlin repeaters or not

We send also a copy of our 96-page illustrated testimonial book and a personal letter in which we refer them to the nearest dealer that we know of who carries a good stock of Marlin goods and is enterprising enough to follow up an inquirer and try to sell the man a Marlin repeater.

We also send to the dealer the name and address of the party inquiring, thereby putting the dealer and the consumer in direct communication one with the other. We also follow up the customer and urge him to buy through the dealer.

Our advertising campaign each year brings us thousands of inquiries and makes us a great deal of expense and trouble, as you can readily see, but we believe that it pays us and it will pay you if you will take part in it.

If you are interested please write us and give us full particulars as to exactly where you stand on Marlin goods. If you are with us we want to know it and send you some of this business. Write us to-day and tell us whether you want to be on our dealers' list or not.

There are many other valuable Marlin ideas included in every Marlin gun. Send six cents in stamps for our handsome catalog, which explains all and contains much other valuable information.

The Better The Range Bakes

The Better The Range Sells

Loading a range with nickel work and faddy ideas will, maybe, make it sell one season—if the price is low enough.

But it takes merit—merit that shows in everyday kitchen use—merit that makes the range's owner boast of it.

It takes that kind of merit to make it sell year after year, and more this year than last.

The test of merit, first and last, in any range, is just this: Does it do good baking?

If we can't prove to you that there never was a range made that will bake so well as The Imperial Oxford, we don't want you to stock it.

That we can prove to you—and you can prove it to your customers.

There's a proposition we want to make to you on this range—on the only range with the right principle of oven construction.

Suppose you ask us what we have to say to you, personally, about

The Imperial Oxford The Range With Eleven Improvements

There's eleven other points to it, and every one of them means easier selling for you, and more profit and reputation. Why wouldn't it be as well for you to ask us questions about our proposition to really **LIVE** dealers? And do that right **NOW**?

AN IMMENSE MAIL ORDER BUSINESS

The announcement that Sears, Roebuck & Co., Chicago, have recently been incorporated as a New York corporation, succeeding the Illinois corporation of the same name, with an authorized issue of $10,000,000 preferred stock and $30,000,000 common stock, is of interest to merchants in all lines of trade. The business in the past has been in the hands of shrewd business men, but it is now to pass into the control of Wall Street financiers, whose usual method is to incorporate for a large amount, divided so that the new cash put in will be represented by preferred stock while the common stock is simply an added bonus to the buyers of the preferred—the men who put up the cash. If this procedure has been followed then the $10,000,000 preferred represents nearly a like amount of cash while the $30,000,000 is wind and water. The farmers and other customers of the concern will continue to buy goods which they cannot see—cash in advance—while the stock gamblers on Wall Street clip the coupons off the stock paper of the mail order trust to the tune of upwards of $30,000,000 annually.

A detailed statement has been given out in the new trust's prospectus showing the success which has attended the mail order business of this single concern, a total business of $50,000,000 per year being quite probable this year. The figures given show the rapid and steady growth of the business during the past five years. The uniformity with which during this period of extraordinary expansion there has been realized a net profit of 7½ per cent. on the sales is significant and striking. Many a merchant and manufacturer would deem himself fortunate if his balance sheet showed as substantial results for his enterprise and efforts.

The company's sales in 1905 amounted to $38,708,526, while for the first five months in 1906 the total sales aggregated $20,322,160, as against $14,247,794 for the similar period in 1905. The officers of the company state that it sells this enormous output without the extension of any credit, the terms being "cash before delivery;" that the business is distributed among upward of 6,000,000 customers in all parts of the United States, whose orders for merchandise are received by mail; that the incoming letters averaged for the past year about 75,000 per day; that the newly completed buildings for handling the merchandise and for administrative purposes cover a large part of 37 acres of land in the City of Chicago, and that the foregoing does not include any of the various manufacturing concerns in which the corporation owns a controlling interest.

Net Profits and Sales.

The following statement is made of the net profits of Sears, Roebuck & Co. for the four years ending December 31, 1905, over all charges, as follows :

1902	$1,215,824.75
1903	1,768,599.07
1904	2,276,871.24
1905	2,868,061.31

The sales of the company during the years above mentioned were as follows :

1902	$16,416,792
1903	24,000,264
1904	28,711,693
1905	38,708,526

Comparative Statement of Sales.

The principal departments into which the business of the company is divided and the sales of each of these departments during the past three years is here given as follows :

Departments :	1903.	1904.	1905.
Furniture	$1,598,642	$2,013,858	$2,941,008
Jewelry and silverware	1,075,598	1,209,150	1,454,452
Groceries	687,553	983,512	1,687,903
Drugs and surgical instruments	504,520	661,445	709,520
Harness	638,946	724,811	1,060,181
Vehicles	1,008,747	1,121,626	1,496,921
Musical goods	983,895	1,125,357	1,337,966
Clothing	2,504,786	2,779,657	3,430,093
Dry goods and carpets	1,424,346	2,006,716	3,070,272
Men's and women's furnishings	1,220,042	1,777,486	2,388,011
Shoes	944,582	1,449,578	2,432,210
Ladies' cloaks, waists, furs	1,056,472	1,554,884	2,111,298
Bicycles	732,837	497,262	634,941
Stoves	1,818,291	1,844,864	2,203,710
Sewing machines	1,387,245	1,323,489	1,327,709
Books and stationery	301,400	318,148	374,217
Paint and wall paper	454,516	700,469	919,381
Agricultural implements	472,816	489,996	650,699
Hardware and house furnishings	2,373,430	2,862,356	4,596,425
Millinery and notions	793,443	1,013,186	1,180,771
Photograph, phonograph and optical supplies	583,888	675,408	897,716
Sporting goods	1,338,777	1,421,594	1,548,317
Binder twine	40,993	65,929	81,599
Electrical goods	54,747	90,755	153,091
Seeds and bulbs	.....	.....	20,103

The facts thus presented call for careful study on the part of those engaged in the hardware and allied trades, whose goods form so large a proportion of those marketed by the mail order house. Conclusive evidence is thus afforded of the formidable competition which the retail dealers of the country are called upon to meet.

Largest Sales in Hardware.

To hardwaremen in Canada who have felt the competition of departmental store mail order concerns in the past, and who are likely to soon have as a competitor a monster mail order concern now in process of formation, the large percentage of hardware lines in the above table will come as a great surprise. The grocer and jeweler does not appear to have been affected much, but the drygoodsman is hit about as hard as the hardware and machinery dealer. The items which can roughly be summed up under the heading of wearing apparel total to $14,612,655, while the hardware lines total to $14,693,077, these latter figures being made up as follows :

Hardware and house furnishings	$4,596,425
Stoves	2,203,710
Bicycles	634,941
Sporting goods	1,548,317
Electrical goods	153,091
Paint and wall paper	919,381
Agricultural implements	650,699
Harness	1,060,181
Vehicles	1,496,921
Sewing machines	1,327,709
Binder twine	81,599
Seeds and bulbs	20,103
	$14,693,077

The two classifications referred to comprise over three-fourths of the total business, this form of competition bearing most heavily upon hardware and dry goods dealers, and proving the necessity of measures of self protection upon the part of both jobbers and retailers in these branches of trade.

Discussing the subject from the standpoint of one interested in the work of the hardware associations in the United States, the Iron Age Says :

"It must be remembered as a partial explanation of this remarkable growth in catalogue house business that the figures relate to years of great prosperity, in which there has been an increase in the volume of business in every branch of trade, of which merchants generally have doubtless received their proportion. With the advance in the financial well being of the people of practically every class and the consequent growth in luxury and in expenditure there has been an increased volume of trade for practically every merchant, and some merchants can doubtless show as large a proportion of growth in their business as the catalogue house in question. After making allowance, however, for this consideration, there remains before the trade

impressive evidence of the growth of the retail mail order business, as shown in the figures presented by the Chicago house. How strongly this growth militates against retail hardware interests is indicated by the fact that this company's sales in hardware and hause furnishing goods increased in 1904 as compared with 1903 about 20 per cent., and in 1905 as compared with 1904 about 60 per cent.

Mail Order House Factories.

"The prospectus also makes a significant reference to the manufacturing establishments in which the mail order house in question holds a controlling interest. It would add much to the enlightenment of the trade if more explicit information was given on this point. It is well known, however, that in an increasing number of lines the great catalogue houses are establishing their own sources of production and becoming manufacturers as well as distributors. There is thus brought into the market a further disturbing influence which has its direct bearing not only on the merchants, wholesale and retail, but on the manufacturers, who are thus confronted with a new and troublesome form of competition. While there may be some who believe that concerted action among the jobbers and manufacturers to shut off the supply of the catalogue houses might diminish the disturbance of their competition so far as leading and trade-marked goods are concerned, it is difficult to see how they are to be prevented from becoming interested in manufacturing plants which they establish or at least control.

"There is no doubt that the joint catalogue house committee, representing the best talent of both the jobbers and the retailers, has accomplished something in connection with the sale of certain special lines of goods by the mail order houses, and that manufacturers generally are entitled to credit for the strenuous efforts they have made for the protection of the trade from the competition of such houses. The trade, however, cannot escape a feeling of disappointment at the result of these measures. In view of what has been done for the repression of the catalogue house business in hardware lines, the discovery of the notable growth of their transactions in the hardware field is a painful and perplexing experience. What should be done in the presence of these facts is a question which may safely be lelt with the committee which so ably represents wholesale and retail hardware interests. Meanwhile, whatever questions there may be in regard to association or concerted action in one form or another, there is no question as to the responsibility which rests on individual hardware merchants to meet the efforts of the catalogue houses with new resourcefulness and enterprise, with a view to holding their own trade and so occupying their territory that there shall be little room for the encroachments of mail order houses."

BINDER TWINE SEIZURE.

Joseph L. Haycock, binder twine inspector, Kingston, made a valuable seizure near Ottawa of some 5,000 pounds of twine under measurement. The act makes confiscation the penalty.

EFFECTIVE HARDWARE ADVERTISING

The ad of Hunt & Ross, Abernethy, Sask., to be found on this page, is better than the ordinary hardware ad. It has more ginger, more enthusiasm. The ad is attractive looking perhaps chiefly from the fact that it is more like a news item than a paid-for trade announcement. Small type is used for the body of the matter and there is no display line. As to the wording itself, the omission of the first sentence would no doubt have been an improvement. It is not good advertising to call the article you are trying to sell a "new-fangled invention." Parentheses might have appeared after the word "place" and before the word "to" in the sentence beginning "It is then set."

THE ART.

There is absolutely no success without advertising of some kind. Even the preacher must have publicity in order to succeed.

You cannot sell gold dollars for fifty cents unless the offer is advertised. And the man who says he never reads advertising or is influenced by it is deceived.

Advertising for general publicity — to create a demand and meet it either in advance or afterwards—is adapted to some kinds of business, such as proprietary articles, and is distinguished from mail order advertising, which introduces the advertiser to his customer, leaving the future relations between them to be worked up and maintained by correspondence. Present day advertising discriminates very carefully in its mediums and methods, according to what it is exploiting. If the advertiser is prepared to meet a national demand, anywhere, he is advised to use general mediums ; if he can handle only a locality or district, he should select publications covering that territory ; if he is seeking a mail order business, he must use mediums whose circulation goes beyond the local field.

Enough blank space should surround your advertisement to give it prominence. It should contain a convincing argument, such as an offer of a desirable article at a very low price. It should be absolutely truthful. Its statements should be plain and in language the people can readily understand—free from extravagant expressions. It must have a strong personal flavor—a quality of the man who writes it and of the business he is exploiting ; it must bring returns.

Advertising
Creates new business.
Enlarges old business.
Revives dull business.
Rescues lost business.
Saves failing business.
Preserves all business.

—D. M. L.

Your neighbors are using the Universal Bread maker
Why dont you ?

Perhaps because this is one of the new fangled inventions you are dubious of its real worth. We are so confident of the abilities of this machine to demonstrate itself as one of the greatest labor saving devices of the present time that we are putting them out on trial, if it is not up to your expectations after using three or four times you may return it and your money will be cheerfully refunded.

What the Universal Bread maker will do. It will mix and knead your dough thoroughly in three minutes. The dough is not touched by the hands. It is then set in a warm place in the same pail it is mixed in to rise. A few turns of the crank in the morning and it is ready for the baking pans.

Simple, is it not ? and just as simple to make the bread.

Hunt & Ross

(EVERYTHING IN HARDWARE.)

CATCHY HEADINGS.

A number of dealers are still inclined to follow the old style of placing their name across the top of the ads. A catchy heading is far more effective. Here are some headings that any hardware dealer can use :

What we have said below is sterling truth.

Homeward wend your way with one of these articles.

Come one ! Come all !

Buying is easy in our store.

We never over-charge nor under-weigh.

Merit wishes to meet you at our counter.

HARDWARE TRADE GOSSIP

Ontario.

D. D. Robertson, brass founders, Toronto, have assigned.

Gilmore & Son, tinsmiths, London, have dissolved partnership.

John Vance, plumber, Hamilton, was a visitor in Toronto on Monday.

C. Beirl, hardware merchant, Markham, was a visitor in Toronto during the week.

J. B. Reade, of H. S. Howland Sons, & Co., Toronto, is spending a fortnight's holidays.

J. J. Small, hardware and stove merchant, Uxbridge, has sold his business to Henry Shelly.

The traveling staffs of several wholesales will be taking their vacation during the next two weeks.

W. Clark, of Allan, Clark & Co., Hamilton, was a visitor in Toronto the early part of the week.

Louis Payette, of Warden, King & Son, Montreal, made a business trip to Toronto on Monday and Tuesday.

Mr. Blaicher, of Blaicher & Risch, Hamilton, called on the Toronto hardware and paint jobbers on Tuesday.

Wm. Pringle, hardware merchant, Whitby, was a delegate to the Masonic Grand Lodge convention in Toronto this week.

D. E. McDonald, of McDonald & Craig, hardware merchants, Florence, attended the Masonic Grand Lodge meeting in Toronto during the week.

Mr. Kempthorne, of Oliver & Kempthorne, hardware merchants, Saskatchewan, Sask., has been visiting his old home at Whitby and spent a couple of days in Toronto during the week.

The rumor that Seigel, Cooper & Co., Chicago, intend opening a branch of their departmental store business on the corner of College and Spadina avenue, Toronto, has been revived.

The assignees sale of wall paper, paints, varnishes, etc., of the firm of Pink & Co., St. Thomas, takes place on Tuesday, July 31. The stock has only been on the shelves for a few months and the opportunity is said to be a good one.

I. M. Clucas, of Chicago, western representative of the Russel & Erwin Hardware Co., has been visiting his father, W. H. Clucas, Toronto, representative of the Canada Paint Co., during the past week.

Weichel Bros., of Waterloo and Elmira are opening a branch hardware store in Berlin, in addition to the 5 and 10 cent store which they recently established next door to their hardware store at Waterloo. The firm has joined syndicate which intends to establish about a dozen 5 and 10 cent stores in the various parts of Canada.

Douglas Fletcher, formerly of R Fletcher & Son, Toronto, left a few days ago for Winnipeg where he has been engaged by the Ashdown Hardware Co. to take charge of their retail paint, oil and glass department.

V. A. Glebe, hardware, flour and feed merchant, Ayton, Ont., has retired from business. J. Werner has purchased the flour and feed department, but as yet no successor has been secured for the hardware business.

Orlando Vickery, manufacturers' agent, Toronto, is in Pittsburg, competing arrangements for the securing of the Canadian agency for the Ruud Instantaneous Automatic Gas Water Heater, manufactured by the Ruud Manufacturing Co., of Pittsburg, Pa. This is a particularly interesting article, heating as it does, a sufficient quantity of water for the entire household direct from the pipes, without the necessity of having the usual galvanized water tank.

Quebec.

J. A. Peard, master plumber, Montreal, is dead.

Ogilvie Bros., plumbers, Montreal, have registered.

The assets of A. Terriault, plumber, Montreal, are to be sold.

The assets of Huit & Co, hardware merchants, Montreal, have been sold.

R. Kraig, of Chateauguay, visited Montreal on business Wednesday of this week.

T. Gerrard & Co., stove and furniture dealers, Montreal, have discontinued business.

Duquette Bros., have been registered registered as plumbing supply merchants, Montreal.

J. T. Smith, secretary of Lewis Bros., Montreal, is taking his holidays on the Maine Coast.

J. A. Robert, hardware merchant, of Grand Mere, visited Montreal on business during the week.

J. E. Seale, general merchant, Morin Flats, was in Montreal last Wednesday, to make some purchases.

H. E. O. Bull, of Decatur, Bull & Co., manufacturers' agents, Montreal, called on the Ottawa trade this week.

Jos. Huette, hardware merchant and tinsmith, St. Hyacinthe, paid a business visit to Montreal a few days ago.

Aime Lemieux, general merchant, of Henryville, was among the out-of-town hardware buyers in Montreal this week.

Mr. Morrow, of Morrow Bros., general merchants, Grenville, was in Montreal a few days ago purchasing stock.

J. P. Seybold, president of the Seybold & Sons Co., Montreal, is enjoying a three weeks' vacation at Prout's Neck.

G. A. Kohl, vice-president of B. & S. H. Thompson & Co., Montreal, is spending a short holiday at Little Metis.

E. B. Ryan, of the invoice department of Lewis Bros., Montreal, is spending his vacation with his parents in Ottawa.

John Warren, Jos. Aselin and E. F. Price, of Frothingham & Workman's staff, Montreal, are away on their holidays this week.

C. F. Smallpiece, of Lewis Bros., Montreal, accompanied by his family, left on Wednesday to spend a vacation at Norway Bay.

J. Chas. Dietrich, representing Shurly & Dietrich, Galt, stopped in Montreal this week on his way home from the Maritime Provinces.

H. Silvester, of H. Silvester & Fils, hardware merchants, St. Lawrence street, Montreal, is spending his vacation at Larraine, in the Laurentains.

W. J. Thompson, Caverhill, Learmont & Co.'s representative in Toronto and Western Ontario, spent part of the week visiting the head office in Montreal.

Ira J. Strong and John W. Cullen, of the Main Belting Co., manufacturers of "Leviathan" belting, Boston, Mass., were in Montreal on business last Tuesday.

Mr. Shillington, general purchasing agent of the Canada Copper Co., Copper Cliff, was in Montreal on Monday of this week, and called on some of the houses with whom he does business.

W. C. Webster, of W. C. Webster & Son, wholesale and retail dealers in hardware and paints, Coaticook, was a visitor at some of the Montreal wholesale houses this week, as he passed through on his way to Abenakis Springs.

Western Canada.

Sibbett & Palmer, scale dealers, Winnipeg, have dissolved partnership.

Cook, Ryan & Co., dealers in electrical supplies, Prince Albert, Sask., have been succeeded by Cook & Wellbanks.

Wm. Ansley, hardware and lumber dealer, Drinkwater, has disposed of his business.

M. M. Keating, hardware and lumber dealer, Lariviere, Man., has sold his lumber business.

Robert Munro, of the Canada Paint Co., Montreal, was in Winnipeg last week consulting with the management of the western branch.

Wm. Vallance, of Hamilton, who was in Winnipeg last week consulting with the management of Geo. D. Wood & Co., has gone further west.

C. C. Ballantyne, Canadian manager of the Sherwin-Williams Co., and president of the Canadian Manufacturers' Association, was in Winnipeg last week making arrangements for the approaching manufacturers' convention. Mr. Ballantyne was among the first guests at the Royal Alexandra, the new palatial C.P.R. hotel. He returned east on Friday of last week.

RETAIL HARDWARE ASSOCIATION NEWS

Official news of the Ontario and Western Canada Associations will be published in this department. All correspondence regarding association matters should be sent to the secretaries. If for publication send to the Editor of Hardware and Metal, Toronto.

Officers Retail Hardware and Stove Dealers' Association of Western Canada:

President—A. J. Falconer, Deloraine.
First Vice-President—J. B Curran, Brandon.
Second Vice-President—W. M. Gordon, Winnipeg.
Secretary-Treasurer—J. E. McRobie, Winnipeg.

Executive—Alberta, A. E Clements, Olds; C. F. Comer, Calgary; A. R. Auger, Okotoks.

Manitoba H. S. Price, Boissevain; A. P. Macdonald, Winnipeg; O. Gilmer. Winnipeg.

Saskatchewan—G. K. Smith, Moose Jaw; S. A. Clark, Saskatoon; J. R. Fox, Weyburn.

Officers Western Board (elected by general merchants and hardwaremen in joint session): President, W. G. McLaren, Souris, Man.; vice-president, G. K. Smith, Moose Jaw, Sask.; H. C. Hamelin, Winnipeg, Man.; secretary, W. A. Coulson, Winnipeg, Man.; treasurer, J. E. McRobie, Winnipeg, Man.; auditor J. A. Lindsay, Winnipeg. Man.

Association offices, 53 Scott building, Main street, Winnipeg.

Officers Ontario Retail Hardware and Stove Dealers' Association:

President—A. W. Humphries, Parkhill.
1st Vice-President—W. G. Scott, Mount Forest.
2nd Vice-President—J. R. Hambly, Barrie.
Treasurer—John Caslor, Toronto
Secretary—Weston Wrigley, 10 Front St. East, Toronto.

Executive Committee—The officers and J. W. Peart, St. Mary's; M. R. Marshall, Dunnville; D. Brocklebank, Arthur; F. W. Jeffery, Midland; E. P. Paulin, Goderich, and Frank Taylor, Carleton Place.

Auditors—J. W. Peacock and C. F. Moorhouse, Toronto.

COMING EVENTS.

Convention of Retail Hardware and Stove Dealers' Association of Western Canada, in Winnipeg, July 25.

Convention of Retail Merchants of Western Canada in Winnipeg, July 26 and 27.

Convention of Ontario Retail Hardware and Stove Dealers' Association, in Toronto, on Sept. 4 and 5.

A BELATED REPORT.

The June number of the Retail Merchants' Journal has come to hand, it containing a four-page report of the Ontario Retail Hardware and Stove Dealers' convention held at Toronto, May 15 and 16. The report does its utmost to justify the actions of certain individuals who brought discredit upon the Retail Merchants' Association by their actions at the hardware convention. The report makes repeated attacks upon the president and secretary of the Ontario Retail Hardware and Stove Dealers' Association, even going to the extent to falsely state that the president and secretary admitted that they have stated untruths at the convention.

The whole report is about as reliable as the statements of the Retail Merchants' Association's secretary and his privately owned organ, the Journal, in the matter of membership of hardwaremen to his association. At the Good Friday hardware convention he gave the delegates to understand that about 150 hardwaremen held membership in the Retail Merchants' Association. By the time of the convention in May this number had grown to 275, according to the Retail Merchants' secretary's statements. On page 191 of the Retail Merchants' Journal for June, however, the number is given as 400 in the third column and 550 in the first column. Hardware merchants throughout Ontario should send for a copy of the Journal and compare its report with that given in Hardware and Metal of May 19.

SHOULD JOBBERS SELL TO CONSUMERS?

J. F. Howe, Freedom, Pa., delivered a practical address on the above subject at the last convention of the Pennsylvania Retail Hardware Association, saying in part:

If the question were, Shall my jobber sell to my customers? it would require no discussion, as it has been settled, for I always refuse to acknowledge any jobber as my jobber who sells to my customers, and right there is where the trouble has been. We have only been interested in seeing that the jobbers did not sell our trade, and have been indifferent as to whether he sold to our neighbor's customers or not. We must take hold of this matter in a different way if we would accomplish anything. We must consider every jobber who does business as our jobber, and every customer of every retail store just as though he were our individual customer. Nothing of any importance is ever accomplished without some sacrifice. We must expect at least to make some small sacrifice in this matter if we accomplish anything. At a glance it looks easy to prevent the jobber from selling customers. We know if every retail store should stop buying from Jobber "A," he would cease to be a jobber from that moment. He might think he was a jobber for a short time, like the snake Pat killed by cutting off its head. But you do not find it so easy to refuse to buy from the jobbers that sell to your customers. If the jobber distrusts you know he has been guilty of this offence in your neighboring town he will likely find some way of overcoming your prejudice. He will make concessions as to terms, or he will cut the price on some things, and thus you do not stand by your brother retailer, who has been robbed by this jobber. No matter how favorable it may be for us to buy from him, we must not do it. We must keep in mind the interest of the retail trade. If you had an own brother in business in another town, would you patronize a jobber who sold direct to your own brother's trade? Then you must consider every dealer as your brother, and every retail store as though you were a partner in it. Ah! but there is the rub. It is so hard for us to consider our neighbor's welfare. Why should we interest ourselves in helping our competitor? We have sad recollections of instances where our competitor across the street did not seem to be especially interested in trying to help us get along. Well, that is another subject.

Organization Gives Protection.

But if some of our competitors have erroneous ideas of ways to get business, and cut prices too low, that would be a matter that likely should be talked over in our local associations, and if there are any of us here from communities having no local organization, we should go home and organize one at once. But this jobber question is our common enemy. We retailers must understand that it is a mutual affair, and while we are looking out for the welfare of our competitors we are doing the very best thing possible for ourselves. Now, the jobber knows perfectly well that we have this situation entirely in our own hands.

The jobbers have an association that establishes rules which the manufacturers respect. But the jobber knows the frailties of human nature, and he thinks the retailers will not stick together. But we have come to a point where we must take hold of this subject. If the jobber does not encroach on you now, he very soon will.

Before we had a retail hardware association we had no redress. At the most we could only refuse to buy from such jobbers. But with this organization, with 300 members, we not only have redress, but absolute prevention. If we only stand by each other we can wipe out this evil that is doing more to demoralize the retail hardware trade than any other one thing. Perhaps some here think I am exaggerating this matter, that the jobbers are not really doing us much harm. Any one who says this is ignorant of the facts. Any one who has looked into this question knows they are. They are doing a great deal more harm than many of us realize. Every time a jobber sells a consumer an article at a wholesale price he is doing us an injustice by taking that much trade away, and he is doing many times more injury by the demoralizing and disturbing influence it has on our trade. For all the neighbors and friends of this customer would know about it, and many of them would think they had been charged too much by the retail dealer. Many people cannot understand that the expense of conducting a business necessitates our selling goods at a considerable advance over jobbers' prices. Every time a jobber sells one of your customers an article at a wholesale price he is surely forcing you to cut down your legitimate price, whether you realize it or not.

Do not become passive about this, and accept it as one of the conditions that must be borne. It is not a "survival of the fittest." It is not a natural state of affairs that has come about in a legitimate way. I am the last man to protest against anything that makes for progress, and by progress I mean conditions that tend to make the mass of people more comfortable and happy. If any retail store can legitimately supply my customers with what they want, can serve their needs better and furnish them with the comforts and luxuries of life for less money than I can (continuously, not spasmodically), then I will get out of the way and let them do it, and will not whine about it. But I will protest against helping to build up, and equip, and arm, any piratical jobber craft that will turn their guns on me

and my friends. This thing is illegitimate, and will eventually work to the undoing of the jobber as well as of us, for their prosperity depends upon our prosperity. If we cannot sell goods at a profit, we will soon cease to be their customers. By their cutting in and taking the cream of our trade they are lessening our ability to buy from them.

Killing the Goose that Lays the Golden Egg.

We have given the jobber our trade, and built up for him a position that gives him an unfair advantage when it comes to retailing. You can all see why this is so. We all know he could not afford to come 25, or 50, or 100 miles from his house to get a few small orders from the consumer alone, at wholesale prices, and he would not think of doing it. If the retailer would not buy from him, and he was sent out after this consumer's trade, he could not afford to do it unless he got a price approximately what any other retailer, local or otherwise, would have to ask for the same goods. But you see he is already here, he is on the spot. The trade your retail stores have given him has paid all his expenses, so it doesn't cost him anything to sell that bill to the consumer. Of course he can undersell you under such circumstances as these. Right here is where he has turned traitor. Up to this time he, the jobber, and you have been honest partners. He furnishes you the goods at a certain price, you invest your money, stack the goods up on the shelves, and retail them out as wanted, at a certain advance. Now he sees a chance to get a part of your profits as well as his own. And he is doing an unfair thing, just as much as if he were violating a written contract, for there is always the implied agreement that if the jobber solicits the dealer's trade he will not sell to the consumer. The fact that he sells to consumers only in towns where he fails to get an order from a dealer is no excuse for him. Some dealers have bought and continue to buy from him or he would not be here at all. This particular jobber robs your trade, and another robs mine. What we must do is to exterminate this mongrel breed.

Every one, jobber and retailer, knows the facts exist as I have stated. Both sides know it is not fair. To whom should we look to correct it? To the jobbers? Certainly not. They are satisfied, as they are getting the best of it. Then it is from the retailers themselves that the remedy must come.

The remedy is simple and effective. If every member of this association will only buy from jobbers who do not sell to consumers, neither in his own town nor in any other town, then one serious trouble of the retailer will be ended. We ask nothing unreasonable, we only ask the jobber to play the game according to the rules.

TORONTO HARDWARE DEALERS' MEETING.

A representative meeting of the hardware and stove dealers of Toronto was held last Tuesday evening, and after an interesting discussion on the sale of goods to consumers, a permanent organization was decided upon as a branch of the Ontario Retail Hardware and Stove Dealers' Association. Definite organization was deferred, however, until the next meeting, when permanent officers will be chosen. J. W. Peacock, 1026 Queen street west, was elected temporary secretary of the Toronto branch.

After a short discussion on the nail question and the sale of enamelware said to be manufacturers' seconds at cut prices by the departmental stores, a most interesting discussion took place regarding the white lead situation. Reference was made to the fact that while most dealers are unable to buy pure lead to-day at less than $6.30 from the regular jobbers, certain retail jobbers are selling to the trade at $6.25, and one purely retail house is selling at $6.30. By purchasing in large quantities these retail jobbers were given a quantity discount, and all surplus goods left on their hands after their regular trade had been supplied are, it is said, disposed of at cut prices, not only to retailers but to ordinary consumers, this tending to greatly demoralize the trade. The general opinion was that the grinders should take action to remedy this state of affairs in order to protect the retail trade.

The labelling of white lead also came under discussion, several speakers agreeing that the marking of cans No. 1 was very confusing to ordinary customers, and allowed one dealer to take advantage of another if he so desired.

These subjects will come up for discussion again at the next meeting, the date of which was decided upon as Tuesday, August 21.

WESTERN RETAIL MERCHANTS.

It is becoming increasingly apparent that the Retail Merchants' Association of Western Canada must at once have a new constitution, for it has long ago outgrown the constitution adopted in February, 1905. Its membership extends through the three provinces of Manitoba, Saskatchewan and Alberta, and it is plain that each of these provinces must have its own local organization and its own secretary acting under the supervision of a general secretary in Winnipeg. Distances in the west are too great, and at present the postal service is too miserably inefficient for the affairs of the association in the three provinces to be managed from Winnipeg. There should be a central office, but there must also be local autonomy.

* * *

Then again the organization now includes more classes of trade than grocers and general merchants. Formed as an association of country storekeepers, it has now grown until there are sections of butchers, druggists and even piano dealers. These have all been organized by Secretary Coulson and they are directly under his supervision, but they have had no voice in the election of the general executive, and under present conditions they are not entitled to any.

* * *

The situation is at present an anomalous one. Nominally these new sections of druggists and butchers and piano dealers, et alia, are branches of the Retail Merchants' Association of Western Canada, at the head of which are President Hunter and his associates. But the Retail Merchants' Association of Western Canada, although the parent organization, has really no right to any such position. It is an association of grocers and general storekeepers whose interests and problems are, in many respects, quite different from those of the butchers and druggists and piano dealers. The simplest way out of the difficulty seems to be the recognition of the fact that the retail merchants and the butchers, the druggists and the piano dealers et alia are merely individual sections of a big association, which at present has no head and which is held together by a tie of the loosest possible description. The only connecting link is furnished by the circumstance that all have been organized by Mr. Coulson. Clearly, a new constitution is urgently required.

* * *

As the months have gone by it has become very evident that the affiliation of the western associations with the Retail Merchants' Association of Canada, that is with the Ontario-Quebec association, presided over by Mr. Trowern, has accomplished nothing and is not likely to be of any service. The burden of Mr. Trowern's song at the February meeting was the "contract plan" of arranging prices. In order to induce the manufacturers to put their goods on the contract price basis he was in urgent need of the co-operation of the western merchants. That co-operation was cheerfully promised and for that purpose affiliation with the Ontario-Quebec organization was willingly agreed to.

But what has happened in the meantime? According to the decision of Mr. Justice Clute in the case of Wampoe & Co., vs. F. E. Karn Co., Limited, this contract price plan is illegal. As other courts have sustained the plan and as the question is one of vital interest to all classes of dealers, this was clearly a case demanding the attention of the retailers in all parts of the country. Could not Wampole & Co. be induced to appeal the case?

Secretary Coulson wrote Mr. Trowern assuring him of the co-operation of the western association in any effort to have the case appealed. His letter was not acknowledged and apparently no action was taken. Mr. Coulson then wrote Wampole & Co. direct and received a reply to the effect that they have no intention of appealing the case and will have nothing more to do with the contract plan.

One of the most difficult obstacles to overcome in business and social intercourse is the man who is ignorant of his ignorance.

Summer is the time to sell clothes bars, clothes baskets, clothes lines, hooks, pins, irons, ironing boards, wash tubs and boards and similar laundry articles.

SPORT AND BUSINESS.

"All work and no play makes Jack a dull boy" is a maxim the truth of which has been amply proven in the lives of many a brokendown business man. The come-early-and-stay-late merchant, who deems it necessary to personally supervise all the pettiest details of his business, who knows no let-up in the nervous grind, from early Monday morning till late Saturday night, will in time become impervious to any educative influences outside his little routine—will, in short, become a "dull boy."

But the tendency in that direction is becoming less marked in the present generation of business men. Perhaps the fact that the country is generally prosperous has much to do with this condition. A good business and a moderate competence are not difficult to acquire in these days of the full dinner pail, and there is now time for business men to broaden themselves by taking a more active interest in affairs.

This comparative leisure would be productive of excellent results if employed in the right way. But, especially among clerks and the younger business men, there is apparent an inordinate love of sports. The all-absorbing interest in lacrosse, baseball, football and other outdoor amusements is, according to many employers, becoming a serious menace to business efficiency. Salesmen are better acquainted with the prowess of different athletes than with the merits of the commodities which they sell. They show more enthusiasm in backing their team against that of a rival town than in urging the superiority of their employer's goods over his competitor's. Their talk is largely composed of arguments, reminiscences and predictions regarding sport and sportsmen. They become hopeless hero-worshippers, the objects of their veneration being strength of body and skill in athletic contest, while they forget the homage which should be paid to shrewdness and mental capacity.

As a breeder of enthusiasm necessary to business success, athletics must take a foremost place in our modern civilization. But that enthusiasm should not be exhausted in the pursuit of excitement and pleasure. The love of sports should not be allowed to become a predominant factor in commercial life.

WESTERN POSTAL SERVICE.

The western postal service at the present time is utterly inadequate. The western business man who reads this will probably say that the expression "utterly inadequate" scarcely does justice to the subject, but in cold print it will scarcely do to put in the unprintable language in which many westerners are wont to indulge when the western postal service is mentioned. Hard things are said of it whenever two or three western business men gather together, and at the recent board of trade convention in Edmonton not one voice was raised in defence of the western postal administration. So many were the instances of neglect and long delays in delivery, so overwhelming was the evidence presented as to the inadequacy of the service, that no defence was possible.

Instances were quoted of delays of weeks and months in the transmission of letters a few miles. This paper can tell of nothing quite so bad as that but one specific instance will serve as an example of the generally inadequate service. A letter from the Winnipeg office of this paper to A. E. Boyle, secretary of the board of trade in Regina, was posted in the Winnipeg post office on June 25th, and was received by Mr. Boyle on July 10th. And this on the main line of the C.P.R.

When such service is not infrequent on the main line of the C.P.R. it may readily be imagined that the service on the new C.N.R. main line from Winnipeg to Edmonton, and on the branch lines, is very much worse. Edmonton wholesalers complain that they can ship goods by freight to their customers on the C.N.R. main line and the goods will arrive a fortnight before the invoice mailed on the same day that the goods are shipped. In the face of such service they find little satisfaction in contemplating the postal surpluses at Ottawa.

The truth is that the west is growing too fast for the Post Office Department and Ottawa officials are too far away to appreciate the situation. What is urgently required at the present time is the appointment of a special deputy postmaster-general, who will live in the west and have full authority in the west to open new post offices as they are required, and to take drastic measures to improve the service between existing offices. Western postmasters do not rely on their "salaries" for a living, and perhaps most of them earn more than they are paid. But the public require and demand an adequate service, and it must be provided no matter what the cost. The western business man feels strongly that it is the duty of the Post Office Department to abandon the task of accumulating a surplus and devote themselves to the organization of an efficient service, cost what it may.

USE THE TELEPHONE MORE.

That there should be a more fraternal feeling amongst competing hardwaremen throughout Canada, is made evident by the too universal jealousy which exists among the retail hardwaremen in Canadian towns and villages. In many cases this jealousy is so deep-rooted that merchants who have known each other for years choose the opposite side of the street rather than meet their competitors face to face, and when the latter event does occur refuse to speak as they pass by.

With the progress made by our retail hardware associations much of this jealousy is bound to be overcome, and the various dealers in each town who meet together at conventions or at their local branch meetings, should get closer together and by so doing realize that their competitors are not the monsters they appear when viewed at long range.

In a hardware store in Eastern Ontario, recently, a customer called and asked to be shown an oil stove. In dickering with the proprietor the customer stated that he could buy a similar stove for a much closer figure from another hardwareman across the road. The two hardwaremen happened to be friends, and each knew the other's prices fairly well. The dealer, therefore, excused himself from the customer for a minute and, going into the office, telephoned to his competitor, who told him a similar story, saying that after he had refused to cut the price the customer had bought a stove from him with the privilege of returning it to him within a month if he did not find it satisfactory. At the end of the month the customer returned the stove and was endeavoring to work a similar deal on the second hardwareman, but

was prevented by the friendship of the two dealers and the use of the telephone.

If often occurs that a farmer or other customer will bring stories of price cutting by other hardware merchants to their regular dealer in the effort to secure lower prices on the goods they are buying, and if the merchant is at all lacking in backbone the farmer with the smooth tongue usually succeeds in making a price cutter of the dealer, thus giving the dealer's competitors reason to look upon him as an unfair competitor.

It pays far better for two or more dealers to work together than to fight each other, and if the hardware merchants in a town can have sufficient confidence in each other to get together and talk things over, agreeing to telephone each other whenever a customer brings in a story that the other fellow is cutting prices, it is likely that every one of the merchants will save enough during the year to pay the rent of their telephone several times over.

U. S. ANTI-TRUST LAW.

The wave of prosecutions against Canadian manufacturers and wholesalers who have banded together in associations for trade protection in order to overcome the evils of excessive competition has not been without its counterpart in the United States, where similar prosecutions have occurred. The lesson to be drawn from the experience there is that anti-trust laws cannot be looked upon as a remedy, as the trust magnates have shrewd lawyers to look after their interests and when legislation is directed against them they turn the laws into boomerangs by the insertion of cunningly arranged phrases. The Iron Trade Review, of Cleveland, draws attention to this in the following interesting article :

"The present activity of the Department of Justice in proceeding against so-called monopolistic combinations is of more than passing interest to the iron and steel trade, for if the line of action now being followed prevails, not a price control association will be safe from attack. The department has brought action against a number of unincorporated trade associations, notably the National Association of Retail Druggists, having for a purpose the control of ruinous competition by means of selling price agreements. The question at issue is whether any group of individuals in the same branch of trade can legally agree upon a price for which a given commodity is to be sold.

"If the principles enunciated in several judicial decisions of the past two years are to prevail, the business of the country will be shaken to its foundations, for there is scarcely a branch of trade which is not governed by a price agreement of some sort. The theory of the law as interpreted seems to be that anything that tends to limit competition is evil, but business men believe that extreme competition has ceased to be beneficial and are everywhere seeking means to curb its ruinous effects. This is evident on all sides. Not only have we 'official' prices for some products, but every town and village in the country has one or more associations of merchants, the sole object of which is to maintain a fair price. Sometimes the agreement is definite and fortified by penalties, sometimes there is only a vague understanding. According to recent interpretations of the law, it makes no difference how definite and how binding the agreement happens to be ; so long as there is an understanding, collusion is charged and assumed.

"The border line of conspiracy in controlling prices has never been determined. The law encourages certain forms of monopoly and punishes others. If a manufacturer of a machine costing $50 chooses to sell his product for $500, he can do so with impunity. But if two or more manufacturers of similar machines agree orally or in writing that they will not sell their competing product for less than a determined price, they become subject to legal proceedings. The question of fair profit or the actual cost to the consumer does not seem to enter into consideration at all.

"Trade associations are a part of modern business. To proceed upon the assumption that they are in principle all bad because they ameliorate some of the worst evils of competition can not fail to have an injurious effect. It has been proved again and again that to allow the competitive struggle with all its scientific destructive weapons to run its ruinous course inevitably brings hardship to the consumer, as well as to the small producer. Price control associations are not confined to this country. In at least one European state they are encouraged and regulated by law.

"It is only by means of trade agreements that the small independent producer can survive in the same field with his powerful rival, and it is a strange commentary upon our system of legislation by popular demand that the very law which was enacted for the purpose of curbing the huge combinations that threatened to crush individual effort is now found to apply only to those whom it was intended to protect."

The absolute negative of common sense is represented by willful and self-obstructed ignorance.

THE SITUATION IN METALS.

Pig lead has begun to recover from the recent depression in prices. It was noted in our remarks last week that the prices then quoted were a trifle lower than the market conditions warranted. Early in the present week more strength was added, and quotations were advanced five cents. Within a short time, however, the situation became still firmer, and another five cents was added to the price, so that current quotations are now from $4.40 to $4.50 per hundred pounds. The lead situation has been most peculiar for some weeks past, and these successive jumps are as hard to explain specifically as were the declines of a short time ago. At present, everything points to a continuance of the firm market and high prices.

Tin is still fluctuating, although not so violently as was the case during the past three or four weeks. Conditions have at least altered so that jobbers are quoting definite prices, but at time of writing things have eased off a little and the price quoted will admittedly be shaded for quantity orders.

British consular reports contain references to the wonderful development in tin mining in Bolivia. New machinery is being installed in many of the older enterprises, while new and promising mines are being opened up in many localities. The chief difficulty encountered has been the want of economical motive power. Permanent water power is not available on the Bolivian table land ; coal is too expensive, and the native fuels are getting scarce. The employment of gas engines has been found quite satisfactory, and the possibility of reducing the fuel consumption is now engaging the attention of the mine owners. If additional capital is invested in these operations, Bolivia promises to become a large factor in the visible supply.

Pig iron prices are stationary, and bookings are now somewhat dull. There is not at present the same complaint as recently existed regarding the difficulty in procuring the softer grades.

Zinc spelter is in about the same position as last week. The slight drop noted in our previous issue was not immediately followed by all producers, though some of the better known brands have since followed the lead. It is considered very likely that spelter will soon again recover its former price, especially as the demand for galvanized iron and other materials in which zinc is largely used is, at the moment, really abnormal.

Sheet metals maintain their strength. Tin plates were this week advanced by a well known Montreal jobbing house, but this has not been generally followed. Galvanized sheets are held very firm at the prices quoted, and most dealers are refusing to shade them under any circumstances.

MARKETS AND MARKET NOTES

(For detailed prices see Current Market Quotations, page 62.)

Quebec Hardware Markets.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, July 20, 1906.

A slight falling off in the number and size of orders this week indicates that the trade is now feeling to a certain degree the usual midsummer lull in business. The farmers throughout the country are now so busy that they cannot spare the time for purchasing trips to their nearest town.

The most noticeable movement this week has been in guns and ammunition. These are beginning to sell quickly, and there is every appearance of a bumper season being at hand.

A peculiar but natural feature of this year's business is that there are practically no sleigh bells booked ahead. Other seasons this work has begun as early as June, but the bad Winter last year seems to have made retailers "canny." More than that, perhaps, the majority of merchants have a large stock on hand, as there was little or no business in this line last Winter. Some of the jobbing houses are just now sending out their samples to their travelers, while other wholesalers are "lying low," believing that there will be a comparatively small demand for bells this year.

A tremendous demand for cement is still shown, and is most pleasing to importers and jobbers, although they find great difficulty in filling specifications. The tendency is now becoming more marked towards the better grades. Contractors and engineers are beginning to realize that, as concrete work is expected to last, the best is none too good. Furthermore, higher class of cement is now being manufactured much more cheaply than formerly, thus giving it one more advantage.

Prices are all the same as last week, and the market, generally, is very firm.

AXES—Business is of the normal volume. We give the following prices: $7.60 to $9.50 per dozen; double bitt axes, $9.50 to $12 a dozen; handled axes, $7.50 to $9.50; Canadian pattern axes, $7.50 a dozen.

HANDLES — We still quote: No. 3, $1.25; No. 2, $1.50; No. 1, $1.90 a doz.; adze handles, 34-inch, $2.20 a dozen; pick handles, No. 2, $1.70; No. 3, $1.50 a dozen.

LANTERNS—Prices and trade conditions generally remain unchanged.

RIVETS AND BURRS—A good demand exists, and prices are steadily held, as follows: Best iron, rivets, section, carriage, and wagon box, black rivets, tinned do., copper rivets and tin swede rivets, 60, 10 and 10 per cent.; swede iron burrs are quoted at 60 and 10 and 10 per cent. off new lists; copper rivets with the usual proportion of burrs, 35 per cent. off; and coppered iron rivets and burrs in 5-lb. carton boxes at 60 and 10 and 10 per cent.; copper burrs alone, 30 per cent., subject to usual charge for half-pound boxes.

HAY WIRE—A good deal of price cutting is being done in some quarters. The big season in this province is not yet on, but liberal buying has been induced by the conditions referred to. We quote the following nominal prices: No. 13, $2.45; No. 14, $2.55; No. 15, $2.70; net cash, f.o.b. Montreal.

MACHINE SCREWS — We quote as follows: Flat head iron, 35 per cent.; flat head brass, 35 per cent.; Felisterhead iron, 30 per cent.; Felisterhead brass, 25 per cent.

BOLTS AND NUTS — The demand just now is particularly brisk. Discounts remain as follows: ⅝ and smaller, 60 per cent. and 10 per cent.; 7-16 and larger, 55 per cent.

HORSE NAILS—A good turnover is being done. We quote: C brand, 40, 10 and 7 per cent.; M.R.M. Co., 55 per cent.; P.B. brand, 55 per cent.

WIRE NAILS—Prices are not yet settled, but nominal quotations are $2.05 per keg base, f.o.b. Montreal.

CUT NAILS—Business is rather slow. The base price remains $2.20 per keg f.o.b. Montreal.

HORSESHOES—Our prices are as follows: P.B. new pattern, base price $3.50 per 100 lbs.; M.R.M. Co. latest improved pattern iron shoes, light and medium pattern, No. 2 and larger, $3.65; No. 1 and smaller, $3.90; snow pattern, No. 2 and larger, $3.90; No. 1 and smaller, $4.15. Light steel shoes, No. 2 and larger, $4; No. 1 and smaller $4.25; featherweight, all sizes, No. 0 to 4, $5.60. Toeweight, all sizes, No. 1 to 4, $6.85. Packing, up to three sizes in a keg, 10c. per 100 pounds. More than three sizes 25c. per 100 lbs. extra.

SPORTING GOODS—Guns and ammunition are now moving well.

BUILDING PAPER—Conditions of the trade are the same as for some time past. Business is fair, with prices unchanged.

CEMENT AND FIREBRICK — The demand is larger than ever. Quotations for this week are as follows: "Lehigh" Portland in wood, $2.54; in cotton sacks, $2.39; in paper sacks, $2.31. Lafarge (non-staining) in wood, $3.40; Belgium, $1.60 to $1.90 per barrel; ex-store, American, $2 to $2.10 ex-cars; Canadian Portland, $2 to $2.05. Firebrick, English and Scotch, $17 to $21, American $30 to $35; White Bros.' English cement, $1.80 in bags, $2.05 in barrels in round lots.

COIL CHAIN — We quote the following prices: 5-16 inch, $4.25; 3-8 inch, $3.75; 7-16 inch, $3.55; 1-2 inch, $3.35; 9-16 inch, $3.30; 5-8 inch, $3.20; 3-4 inch, $3.05; 7-8 inch, $3; 1 inch, $2.95.

FREEZERS — The season is now pretty well over, but sorting orders are still being received. Our quotations are as follows: American Twin, 2 quart, $2.30, 3 qt. $2.65, 4 qt. $3.25, 6 qt. $4.15, 8 qt. $5.10, 10 qt. $6.40, 12 qt. $7.75, 15 qt. $9.95, and 20 qt. $13; Gem, 1 pt. $1.35, 1 qt. $1.60, 2 qt. $1.75, 3 qt. $2.15, 4 qt. $2.60, 6 qt. $3.25, 8 qt. $4.20, 10 qt. $5.45, 12 qt. $6.50, 14 qt. $7.25; Blizzard, 1 qt. $1.25, 2 qt. $1.70, 3 qt. $1.95, 4 qt. $2.35, 6 qt. $2.95, 8 qt. $3.70, 10 qt. $4.80, 12 qt. $5.75, 14 qt. $6.75.

GREEN WIRE CLOTH—The continued warm weather is responsible for exceptionally large sales in green wire cloth, at the same quotation of $1.45 per hundred square feet.

Ontario Hardware Markets.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, July 20, 1906.

A normal Summer trade is being done just now, the demand having fallen off considerably owing to the fact that travelers are taking their vacations. Mail orders have increased, however, but the shipping staffs of the wholesale houses have had something of a respite from the activity which has prevailed up to the present time.

Fall goods are commencing to move some and guns and ammunition is becoming a more frequent item on the orders received. There is every indication of a large trade being done in firearms during the coming Fall. Summer goods are still selling well and building supplies keep up splendidly. The trade in cement is particularly large.

As reported last week, the manufacturers of bolts are refusing to accept orders earlier than Fall delivery, having practically withdrawn from the market temporarily. There is a shortage noted in machine bolts in all sizes above ½ in.

AXES AND HANDLES—Trade continues normal, with no price changes.

CUTLERY AND SILVERWARE — The demand for Fall goods is picking up and sorting orders are fair.

SPORTING GOODS—Lawn bowling and cricket goods are selling well. Fish-

ing tackle is a live line and ammunition is commencing to liven up.

SCREEN DOORS AND WINDOWS — Trade is slackening off, but green wire cloth is still selling well. There is some talk of a scarcity but one is not considered likely.

HAMMOCKS—The hot weather has created a large sale of these goods. A better class of hammock than usual is being asked for, and manufacturers are kept busy getting out stock.

LAWN MOWERS AND HOSE — Demand is decreasing but considerable sorting is reported.

REFRIGERATORS AND FREEZERS—A falling off is noticed in the demand.

WASHING MACHINES — A normal demand is noted.

CHAIN—We quote as follows : 1 inch, $6.60; 5-6 inch, $4.55; ⅞ inch, $3.95; 7-16 inch, $3.80; ½ inch, $3.65; 9-16 inch, $3.55; ⅝ inch, $3.45; ¾ inch, $3.35.

EXTENSION AND STEP LADDERS —Prices continue as follows : Step ladders at 10c. per foot for 3 to 6 feet, and 11c. per foot for 7 to 10 feet ladders. Waggoner extension ladders, 40 per cent.

POULTRY NETTING—Sales are reported large. We quote : 2-in. mesh, 19 w.g., discount 55 and 5 per cent. All others 50 per cent.

GALVANIZED WIRE — We quote : $2.17½ f.o.b. Cleveland.

BARB WIRE — Prices remain the same. We quote : On gauge 9, $2.40; gauge 12, $2.55; gauge 13, $2.65, f.o.b. Toronto.

OILED AND ANNEALED WIRE — (Canadian)—Gauge 10, $2.31; gauge 11, $2.37; gauge 12, $2.45 per 100 lbs.

WIRE NAILS—The open market continues, with prices unsettled, but we nominally quote : $2.05 base.

CUT NAILS—We quote : $2.20 base, f.o.b. Montreal. Toronto, 20c. higher.

HORSENAILS—"C" brand, 40, 10 and 7½ off list. "M.R.M." brand, 55 per cent off. "Monarch" brand, 50 and 7½ off. "Peerless," 50 per cent. off.

HORSE SHOES — Our quotations continue as follows : P. B. base, $3.65; "M.R.M. Co., latest improved pattern" iron shoes, light and medium pattern, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; snow No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $4.15; No. 1 and smaller, $4.40; featherweight, all sizes, 0 to 4, $5.75; toe weight, all sizes, 1 to 4, $7. Packing, up to three sizes in a keg, 10c. per hundred lbs. extra; more than three sizes in a keg, 25c. per hundred lbs. extra.

RIVETS AND BURRS—Tinned rivets have been advanced and are now quoted net extra 4 cents per pound.

SCREWS—We quote : On gimlet point 70 and 5 per cent. off ; on cone point, 70 and 10 per cent. off list.

BOLTS AND NUTS—Stocks are bare and manufacturers are refusing to accept orders. We quote : 55 and 10 per cent. off list.

CEMENT — We quote : For carload orders, f.o.b. Toronto, Canadian Portland, $1.95. For smaller orders ex warehouse, Canadian Portland, $2.05 upwards.

FIRE BRICK—English and Scotch fire brick, 27c. to 30c.; American low-grade, 23c. to 25c.; high-grade, 27½c. to 35c.

HIDES AND WOOL—Hides are firm and the supply is about equal to the demand. Wool is freely offered, but there is a feeling that buyers at present prices will make a loss. Lamb skins are 10c. higher.

Hides, inspected, steers, No. 1	0	12½
" " " No. 2	0	11½
" " cows, No. 1	0	12½
" " " No. 2	0	11½

Canadian Metal Markets.

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, July 20, 1906

During the present week most of the metals which were reported to have declined in our previous issue, have gone up again. The demand still keeps up and is considered wonderful for the season.

Ingot tin is, at present writing, a little stronger, although some fluctuations early in the week threatened to keep prices down. It is now believed by market authorities that tin has reached its bottom price and firmer conditions may be expected. Indeed, a prominent metal expert here is predicting an advance as early as next week. With the return to more normal conditions we are this week able to quote a definite price, which, however, will be shaded for good round lots.

Pig lead also seems to have reached the end of its recent slump. The speculative interests who were forcing the price down have apparently lost control of the market, and the fact that there has been a very keen demand for the metal, has caused a slight increase in price.

Copper is unchanged and continues as firm as ever. Antimony, however, is rather weaker, and, although we make no change in our quotations, it may be understood that this price is nominal. Montreal jobbers have not very large stocks and they are holding the price up in consequence, a little higher perhaps, than present market conditions would justify.

The slight reduction in spelter, noted last week, was by no means general, as some of the best known brands are still selling at the old prices. It is not thought that any action on the part of producers was responsible for the decline. The explanation given is that holders who had parcels of zinc in stock preferred to realize on a prompt turnover and so dumped their holdings on the market.

Sheet metals are, if anything, stronger than at our last report. Galvanized iron prices are noticeably stiffer, and no concessions will be entertained under any circumstances. In some quarters tin plates have been advanced, but so far this has not become general.

COPPER—This metal still maintains its strength. We are quoting: Ingot copper, 21c. to 21 1-2c.; sheet copper, base sizes, 25c.

INGOT TIN—Conditions at time of writing are firmer than earlier in the week, but we still quote last week's prices, which will be shaded for good round lots. Our price is 43c. to 44c. per pound.

INGOT ZINC—From present indications the market will very soon recover the slight drop of last week. We quote: 7c. to 7 1-4c. per pound.

ANTIMONY—Montreal stocks are light, so that, although market conditions are somewhat easier, we still quote 28c. per pound.

PIG LEAD—An advance has been made and conditions generally firmer. Our price now is $4.35 to $4.45 per 100 pounds.

PIG IRON—There is no special feature to the trade. We give prices:

"Dom.," No. 1.$19.50 to $20.00 delivered Montreal
Usual difference in price for lower grades.

Ferrona No. 1	$19 50	delivered	Montreal
" No. 2	19.00	"	"
" No. 3	18.50	"	"
" No. 4	18.00	"	"
Londonderry	20.50	"	"
Carron No. 1	22.00	"	"
" (special)	21.00	"	"
Summerlee No. 1	22.00	"	"
" No. 3 (soft)	21 00	"	"
Clarence No. 1	18.50	"	"
" No. 3	18.00	"	"
Cleveland No. 1	18.25	"	"

BOILER TUBES—We quote : British and American tubes, 1 1-2 inch, 8 1-2c.; 2 inch, 8 1-2c.; 2 1-2 inch, 10c.; 3 inch, 12c.; 3 1-2 inch, 15 3-4c.; 4 inch, 20c.; 5 inch, 45c. Price per foot net.

TOOL STEEL—Our prices are unchanged : Colonial Black Diamond, 8c. to 9c.; Sanderson's 8c. to 45c., according to grade; Jessop's, 13c.; Jonas & Colver's 10c. to 20c.; "Air Hardening," 65c. per pound; Conqueror, 7 1-2c.; Conqueror High Speed Steel, 60c. ; Jowitt's Diamond J., 6 1-4c. to 7c.; Jowitt's Best, 11c. to 11 1-2c.

MERCHANT STEEL—Trade is good in nearly all lines. Prices remain as follows : Sleigh shoe, $2.17½ ; tire, $2.27½ ; spring, $2.75; toecalk, $2.82 1-2; machinery iron finish, $2.27 1-2; ruled machinery steel, $2.75; mild, $2.17 1-2 and upwards; square harrow teeth, $2.27 1-2. Net cash 30 days. Rivet steel quoted on application.

COLD ROLLED SHAFTING—We are still quoting: 3-16 inch to 1-4 inch, $6.80; 5-16 inch to 11-32 inch, $5.78; 3-8 inch to 17-32 inch, $4.76; 9-16 inch to 47-64 inch, $4.08; 3 1-8 inch to 3 7-16 inch, $3.60; 3-4 inch to 1 7-16 inch, $3.75; 1 1-2 inch to 3 inch, $3.50; 3 1-2 inch to 3 15-16 inch, $3.75; 4 inch to 4 7-16 inch, $4.08; 4 1-2 inch to 4 11-16 inch, $4.42.

GALVANIZED IRON—Still firmer conditions now exist in galvanized sheets. No concessions will be given on prices. We quote as follows: Queen's Head, 28 gauge, $4.35 to $4.60; 26 gauge, $4.20; 22 to 24 gauge, $3.65; 16 to 20 gauge, $3.50; Apollo, 28 gauge, $4.25 to $4.50; 26 gauge, $4.10; 22 and 24 gauge, $3.55; 16 to 20 gauge, $3.40; Comet, 28 gauge, $4.25 to $4.50; 26 gauge, $4.10; 22 and 24 gauge, $3.55; 16 to 20 gauge, $3.40; Bell brand, 28 gauge, $4.40 to $4.45; Fleur-de-Lis, 28 gauge, $4.20 to $4.45; 26 gauge, $4.05; 22 and 24 gauge, $3.50; 16 to 20 gauge, $3.35; Gorbal's "Best Best," 28 gauge, $4.20 to $4.45; "Windmill Best," 28 gauge, $4.15; Sword and Torch, 28 gauge, $4.15; Colborne Crown, 28 gauge, $4.20 to $4.45. In less than case lots 25c. extra.

BLACK SHEETS—The market is very firm. We quote: 28 gauge, $2.40; 26 gauge, $2.35; 22-24 gauge, $2.30; 19-20 gauge, $2.30; 8-10 gauge, $2.45.

CANADA PLATES—Good business is being done and the following prices are firm: 52's, $2.60; 60's, $2.65; 75's, $2.75; full polished, $3.75 to $4; galvanized, 52's, $4.10; 60's, $4.35.

TINPLATES—Some dealers have advanced prices, but the following figures are still obtainable. Cokes, base size, 1C 14x20, $4; charcoal, base size, 1C, 14x20, $4.25.

TERNE PLATES—Our price remains $6.85.

SHEET ZINC—We are still quoting: $8 in casks; $8.25 in less than casks.

SHEET LEAD—The recovery of pig lead has stiffened prices. We still quote: 2½ lbs., 5½c. by the roll; 3 lbs. and heavier, 5¼c. by the roll; small quantities, 25c. per hundred lbs. extra.

BAR IRON—Price is firmly held at $2.05 base, f.o.b. Montreal.

OLD MATERIAL—The market is dull and there is not much doing, but last week's prices still hold good. There is not a great deal of rubber in the market, and dealers expect that if the manufacturers get at all busy they are liable to advance their quotations on scrap rubber owing to the scarcity of scrap. We quote: Light copper, 14¼c.; heavy red brass, 14½c.; yellow brass, 11 1-2c.; light brass, 7 1-2c.; lead, 3 1-4c.; zinc, 4c.; machinery cast scrap, $13; wrought scrap, $12; stove plate scrap, $10.50 to $11; mixed rags, $1 to $1.20 per 100 lbs.; old rubbers, 7½c.

Over-estimated personalities are responsible for the downfall of many under-estimated propositions.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, July 20, 1906.

There are no new features on the metal market this week, there being no changes in prices. There has been a continued fluctuation in ingot metals on foreign markets, but this has not affected the local quotations. Trade in general is very fair. The pig iron market remains featureless. Bar iron has only a fair demand. There is no change in the brass market. Copper is rather quiet, but prices remain as quoted last week. The lead market is becoming firmer. The zinc spelter market is quiet. The situation on the old material market remains much the same as last week, that is the demand is quite light because of the unsettled conditions on the ingot metal market.

PIG IRON — Trade is quiet with prices the same. We quote as follows: Radnor at furnace, $30; Hamilton at furnaces, No. 1, $20.50; No. 2, $20; Londonderry, f.o.b., Toronto, No. 1, $21.50, No. 2, $21; Middleborough, $21.50.

BAR IRON — There is only a fair demand for bar iron and the stocks are light. We quote: $2.15 base, f.o.b. Toronto, with discount of 2 per cent. net cash.

INGOT TIN—There has been a continued fluctuation on the market, but prices remain unchanged from last weeks quotations. Quotations are 41c. and 42c. per pound.

TIN PLATES—Market continues less active. We quote as follows: Cokes, base size, 14x20, $4; charcoal, base size, 14x20, $4.50.

GALVANIZED SHEETS—Prices are well maintained and demand is active. We quote: 16 to 20 gauge, $3.45 up.

BRASS—The market continues firm with no price changes. Buying is active and quotations 23c. to 24c. per pound.

COPPER—Market is rather quiet; prices remain unchanged. Our quotations are as follows: Ingot copper, $20 per 100 lbs., and sheet copper, $25 per 100 lbs.

LEAD—Market is becoming firmer, but local dealers are still quoting $4.40 for imported pig, and $5 per 100 lbs. for bar lead.

ZINC SPELTER—The market is quiet and prices remain unchanged. We quote: 7¼c. per lb. for foreign and 5¾c. to 6c. per lb. for domestic.

BOILER PLATES AND TUBES — A lively demand is experienced from threshers. Our quotations are as follows: Plates, per 100 lbs., $2.35; heads, per 100 lbs., $2.60; tank plates, 3-16 inch, $2.45; tubes, per 100 feet, 1¼ inch, $8.50; 2, $8.80; 2¼, $10.75; 3, $12; 3½, $15.80; 4. $20. Terms, 2 per cent. off.

ANTIMONY — Prices are unchanged and 27c. is quoted.

OLD MATERIAL — Dealers' buying prices are as follows: Heavy copper and wire, 15c. per lb.; light copper, 13½c. per lb.; heavy red brass, 13c. per lb.; heavy yellow brass, 11c. per lb.; light brass, 8¼c. per lb.; tea lead, $3.25 per 100 lbs.; heavy lead, $3.50 per 100 lbs.; scrap zinc, 4½c. per lb.; iron, No. 1 wrought, $10.50 to $11; No. 2 wrought, $3 to $5; machinery cast scrap, $13.50 to $14; stove plate, $10; malleable and steel, $5; old rubbers, 7½c. per lb.; country mixed rags, $1 to $1.25 per 100 lbs., according to quality.

COAL—The usual monthly advance of 10c. has been made, the figures now being: Anthracite in cars at bridges, egg, stove and nut, $5.30; grate, $5.05; pea $3.60, per gross ton.

Standard Hocking, soft coal, in cars, f.o.b. at mines: Lump, $1.50; ¾ inch, $1.40; run of mine, $1.30; nut, $1.25; N. P. and S., $1; slack, 75c.; box cars, 10c. per ton additional.

Youghiogheny soft coal in cars, bonded at bridges: 1¼ inch, $2.50; ¾ inch, $2.40; mine run, $2.30; slack, $2.05.

For Manitoba, British Columbia and Maritime Provinces markets see pages following.

UNITED STATES METAL MARKETS.

From the Iron Trade Review, Cleveland, July 19, 1906.

The Iron Trade Review calls attention to the startling invasion of steel works and rolling mills by electric power. In this connection it says:

"The line of improvement in electrical machinery which has probably done most to encourage its adoption in mill operations has been that of developing a high torque at starting. The first important application of electrical power was in cranes, where the chief competition was hydraulic power, with its absolute suddenness of starting and stopping, a line on which the early electric motors could not compete, and advantages in other directions had to be shown to make up for this deficiency. This has all been changed, when a motor driving a heavy mill can reverse in three seconds. Electricity has thus far found no limit in iron and steel works operations. It has conquered in one direction after another. Its most recent success in driving the heaviest machinery leaves no field unconquered. It certainly is the universal fluid when it helps to raise the iron ore from the ground, separates it where necessary by another form of its power, from the gangue drives machinery in various processes through the conversion into finished product, furnishes light at all stages, and even by magnetic attraction lifts huge pieces of steel when they must be carried from one point to another."

The pig iron market is exceedingly strong. Practically all of the basic and Bessemer that can be made in the valleys this year has been sold, and there is also little available foundry iron. Prices are firm, with a tendency to advance. The principal malleable interests have purchased 25,000 tons. In the south the shortages of labor continues to cause much embarrassment, production is decreased and deliveries are being retarded. Some very exceptional sales of southern iron are being made at $13, but the usual price is $13.25, and some furnaces are holding for $13.50. The scarcity of northern

iron is shown by the shipments of pig made at Ironton, O., to the Cleveland district.

The action of Secretary Bonaparte in dividing the tonnage for two battleships among three companies, has been received with general favor by the trade. It is expected that at an early date orders for 11,000 tons of plates and structural material for the battleships will be placed in Pittsburg mills. This is in addition to the requirements for armor plate. The plate market shows decided improvement. Contracts for plates for two lake freighters have been placed within a few days, and requirements of two other freighters are under consideration.

The New York Central has awarded the contract for 80,000 tons of rails to the Illinois Steel Co., and the same amount to the Lackawanna Steel Co., for delivery in the Spring of 1907, for use on lines west of Buffalo. It is understood that the entire requirements of this system for 1907 will be 240,000 tons. Among other large orders placed for rails were 10,000 tons each by the Erie, Lehigh Valley and Great Northern. It is estimated that orders for 15,000 cars are pending, and the buying of track supplies is active. In the placing of orders for bridge material the railroads are also conspicuous.

LONDON METAL MARKETS.

From Metal Market Report, July 18, 19 6.

PIG IRON — Cleveland warrants are quoted at 50s. 4½d., and Glasgow standard warrants at 50s. 1d., making prices as compared with last week 3d. higher for Cleveland warrants and 3d. higher for standard warrants.

TIN—Spot tin opened irregular at £167 2s. 6d., futures at £165 10s., and after sales of 140 tons of spot and 280 tons of futures closed easy at £166 12s. 6d. for spot, £166 10s. 6d. for futures, making price compared with last week £1 12s. 6d. higher on spot, and £3 5s. 6d. higher on futures.

COPPER—Spot copper opened firm at £79 17s. 6d., futures £79 7s. 6d., and after sales of 100 tons of spot and 700 tons of futures, closed firm at £80 7s. 6d. for spot and £79 17s. 6d. for futures, making price as compared with last week 2s. 6d. lower on spot and 12s. 6d. higher on futures.

LEAD—The market closed at £16 15s., making price as compared with last week 9s. higher.

SPELTER—The market closed at £26 15s., making price as compared with last week unchanged.

Nova Scotia Trade News.

Halifax, N.S., July 17.

The annual meeting of the Maritime Wholesale Hardware Association was held at the Manhattan Hotel, Digby, N.S., a few days ago. Representatives from nearly all of the wholesale hardware firms in the Maritime Provinces were present. After discussing trade matters in general, the following officers were elected: President, E. K. Spinney, Yarmouth, N.S.; vice-president, John J. Keefe; executive committee, W. H. Sterns, T. Douglas, Percy Simmonds, T. C. Lee, J. R. Murray, and W. H. Smith.

Rhodes, Curry & Company, of Amherst, have received the contract from the Grand Trunk Pacific Railroad for two thousand five hundred cars to be delivered in five hundred lots, the contract time extending over five years. This represents about two million dollars.

The Maritime Coal & Railway Company, of Chignecto, who are putting in a plant to supply Amherst manufacturers with power, have awarded the contract to the Westinghouse Manufacturing Company, of Hamilton, Ontario.

A. E. Dyment, M.P. for Algoma district, one of the directors of the company, and Senator William Mitchell, president, accompanied by Messrs. Wainwright, vice-president, and W. H. Bigger, chief counsel of the G. T. P., visited the works at Chignecto on Saturday.

Trade is dull, and there is not much doing in any line with the exception of cement, large quantities of which are now being used in this city. The Warren Paving Co., which has the contract for paving the streets here, is using the Rampart brand, manufactured by the Sydney Cement Co. About 100 bags are consumed daily in the work.

H. C. Burchell, who has been appointed manager of the Sydney Cement Co., has arrived from Newfoundland to take up his duties.

The Hewson Woolen Mills Co., of Amherst, distributed about $125,000 last week among their weavers as a bonus in addition to the regular pay. This is in accordance with a plan adopted by them some time ago, and is paid to the weavers who work steadily for six months without losing time except by special permission. Each successive period of six months brings an increased amount.

N. A. Rhodes and W. A. Fillmore will soon commence the erection of a large brick block in Amherst. The new building will be occupied by the Maritime Departmental Store Co., Limited. This company is composed of Amherst capital and has a capital of $500,000. Several Amherst merchants are interested in the new concern.

Two large engines will be shipped this week by the Robb Engineering Co., of Amherst, to the J. R. Booth pulp mills near Ottawa. Three of these engines have already been sent forward, and another is under construction.

New Brunswick Trade News

St. John, N.B., July 14.

Hardware merchants generally are naturally accustomed to look for a period of comparative dullness in their trade at this season of the year. The indications are that this time of quietness has now set in. Compared with the same seasons of other years business is satisfactory, but certainly the volume of business done is not proving large. But the business of the earlier part of the year was brisk and as collections have been good the dealers, with the prospect of a successful Fall trade, are not finding much cause for complaint.

* * *

The rapid increase in the uses found for gasoline have had the effect, here as elsewhere, of sending the price of the commodity skyward, though not in any meteoric, but rather a steady way. Prices now prevailing are exceptionally strong. In the Maritime Provinces as in the other parts of the Dominion the increase in the consumption has been almost remarkable. In some sections the ordinary supply is proving unequal to the demand and extra orders are becoming necessary. Subsequent seasons will doubtless see the gasoline sale here greatly increased.

* * *

The Maritime Wholesale Hardware Association held its regular meeting on Wednesday last at Digby, N.S. Reports submitted showed the association's affairs to be in an eminently satisfactory condition. The officers elected were: E. K. Spinney, Yarmouth, president; John Keeffe, St. John, vice-president; T. Douglas, W. H. Sterns, Percy Simmonds, T. C. Lee, J. R. Murray, W. H. Smith, executive committee.

* * *

Once again an advance in lead pipe is to be noted. At this date the prevailing price of the pipe is approximately sixty cents higher than it was at the beginning of the year. Pig lead continues to maintain its high average as regards price. Fluctuations at the primary markets have been recorded but on the whole they have failed to make themselves felt here. An advance in white lead prices in the near future also will not be the cause of much surprise. The firm tone of metals generally is continuing.

* * *

Carriage bolts have recently been advanced in price. They are now quoted at ten per cent. more than a few weeks ago. Screws have also gone upward. Gimlet-pointed screws now bring ten per cent. more than formerly and cone-pointed screws are five per cent. stronger.

* * *

Both the turpentine and linseed oil markets are a trifle easier now than a short time ago. However, there is a feeling that turpentine at least may advance again ere very long.

NOTICE TO DEALERS.

Efforts having been made to sell to the hardware trade, specialties of various brands with the statement that they were made in the works of the Enterprise Mfg. Co., of Pa., with the skilled labor and high standards that have given the Enterprise goods their reputation, the company desire emphatic announcement made that it is its invariable rule not to manufacture specialties under any other name than its own. Goods otherwise marked, and offered with the claim that they were made in the Enterprise works, should be viewed with suspicion, to say the least, as sailing under false colors. The fact that such claims are made is a tribute to the high standards of Enterprise workmanship, but they are unjust and injurious, both to the concern itself and to the dealers who may be misled thereby. All dealers know the trade mark "Enterprise."

Prejudice prophecies the failure of about as many enterprises as generosity anticipates to success.

Hardware and Metal Conditions in Manitoba

(Market quotations corrected by telegraph up to 12 a.m. Friday, July 20 1906.)

Office of HARDWARE AND METAL,
Room 511, Union Bank Building,
Winnipeg, Man.

An advance of 25 cents per 100 lbs. in shot is about the only quotable change of importance this week. For the season of the year, jobbing houses report a very active demand for general hardware supplies.

GREEN WIRE CLOTH—Quoted at $1.55 per 100 square feet.

LANTERNS—Prices are quoted as follows: Cold blast, $5.25; coppered cold blast, $7.25; cold blast dash, $7.75; lift, $4.25 per doz.

WIRE—Wholesale prices are steady but sharp competition among retailers in various centres is reported. We quote: Barbed wire, 100 lbs., $2.90; plain galvanized, 6 to 8, $3.39; 10, $3.50; 12, $3.10; 13, $3.20; 14, $3.90; 15, $4.45; 16, $4.60; plain twist, $3; staples, $3.50; oiled annealed wire, 10, $2.96; 11, $3.02; 12, $3.10; 13, $3.20; 14, $3.30; 15, $3.45. Annealed wires (unoiled) 10c. less.

HORSESHOES — Quotations are as follows: Iron, No. 0 to No. 1, $4.65; No. 2 and larger, $4.40; snowshoes, No. 0 to No. 1, $4.90; No. 2 and larger, $4.65; steel, No. 0 to No. 1, $5; No. 2 and larger, $4.75.

HORSENAILS — Lists and discounts are quoted as follows: No. 10, 20c.; No. 9, 22c.; No. 8, 24c.; No. 7, 26c.; No. 6, 28c.; No. 5, 32c.; No. 4, 40c., per pound. Discounts are quoted as follows: "C" brand, 40, 10 and 7½ per cent., "M" brand and other brands, 55 and 60 per cent. Add 15c. per box.

WIRE NAILS—Steady at $2.60 per keg.

CUT NAILS—Quoted now at $2.70 per keg.

PRESSED SPIKES—Prices are as follows: ½ x 5 and 6, $4.60; 5-6 x 5, 6 and 7, $4.25; ⅝ x 6, 7 and 8, $4.10; 7-16 x 7 and 9, $4.00; ½ x 8, 9, 10 and 12, $3.90; ⅝ x 10 and 12, $3.75.

SCREWS—Discounts are as follows: Flat head, iron, bright, 85 and 10 p.c.; round head, iron, 80 p.c.; flat head, brass, 75 and 10 p.c.; round head, brass, 70 and 10 p.c.; coach, 70 p.c.

NUTS AND BOLTS — Discounts are unchanged and continue as follows: Bolts, carriage, ⅝ or smaller, 60 and 5; bolts, carriage, 7-16 and up, 55; bolts, machine, ⅝ and under, 55 and 5; bolts, machine, 7-16 and over, 55; bolts, tire, 65; bolt ends, 55; sleigh shoe bolts, 65 and 10; machine screws, 70; plough bolts, 55; square nuts, case lots, 3; square nuts, small lots, 2½, hex nuts, case lots, 3; hex nuts, smaller lots, 2½ p.c.

RIVETS—Quoted now as follows: Iron, 60 and 10; copper, No. 8, 34½; copper, No. 12, 40 p.c.

COIL CHAIN — Unchanged in price. We quote: 3-16 inch, $9.25; 5-16, $5.20; 7-16, $4.45; ⅝, $4.10; ½, $7.20; ⅝, $4.60; ¾, $4.30; ⅞, $4.

SHOVELS—Discounts on spades and shovels continue 40 and 5 p.c.

HARVEST TOOLS — Discounts continue 60 and 5 p.c.

AXE HANDLES—Quoted as follows: Turned, s.g. hickory, doz., $3.15; No. 1, $1.90; No. 2, $1.60; octagon, extra, $2.30; No. 1, $1.60.

AXES—Prices quoted as follows: Bench axes, 40; broad axes, 25 p.c. discount off list; Royal Oak, per doz., $6.25; Maple Leaf, $8.25; Model, $8.50; Black Prince, $7.25; Black Diamond, $9.25; Standard flint edge, $8.75; Copper King, $9.00; Columbian, $10.75; handled axes, North Star, $7.75; Black Prince, $9.25; Standard flint edge, $10.50; Copper King, $11 per doz.

BUTTS — The discount on wrought iron butts if 70 p.c.

CHURNS— The discounts from list continue as before: 45 and 5 per cent.; but the list has been advanced and is now as follows: No. 0, $9; No. 1, $9; No. 2, $10; No. 3, $11; No. 4, $13; No. 5, $16.

CHISELS—Quoted at 70 p.c. off list prices.

AUGER BITS—The list on "Irwin" auger bits is now the same as on common bits. Discount on "Irwin" is 47½ per cent., and on the common bits 70 per cent.

BLOCKS—Discount on steel blocks is 35 p.c. off list prices; on wood, 55 p.c.

FITTINGS — Discounts continue as follows: Wrought couplings, 60; nipples, 65 and 10; T's and elbows, 10; malleable bushings, 50; malleable unions, 55 p.c.

GRINDSTONES — The price is now 1¾c. per lb.

FORK HANDLES — The discount is 40 p.c. from list prices.

HINGES—The discount on light "T" and strap hinges is 65 p.c. off list prices.

HOOKS — Prices are quoted as follows: Brush hooks, heavy, per doz., $8.75; grass hooks, $1.70.

STOVE PIPES—Quotations are as follows: 6-inch, per 100 feet length, $8.50; 7-inch, $9.25.

DRAW KNIVES—The discount is 70 per cent. from list prices.

RULES—As noted last week, the discount is now 50 p.c. off list—not 50 and 10 p.c. as formerly.

WASHERS—On small quantities the discount is 35 p.c.; on full boxes it is 40 p.c.

WRINGERS—Quotations are: Royal Canadian, $33; B.B., $37.75 per doz.

FILES—Discounts are quoted as follows: Arcade, 75; Black Diamond, 60; Nicholson's, 62½ p.c.

BUILDING PAPER — Prices are as follows: Plain, Joliette, 40c.; Cyclone, 55c.; Anchor, 55c.; pure fibre, 60c.; tarred, Joliette, 65c.; Cyclone, 80c.; Anchor, 65c.; pure fibre, 80c.

TINWARE, ETC. — Quoted as follows: Pressed, retinned, 70 and 10; pressed, plain, 75 and 2½; pieced, 30; japanned ware, 37½; enamelled ware, Famous, 50; Imperial, 50 and 10; Imperial, one coat, 60; Premier, 50; Colonial, 50 and 10; Royal, 60; Victoria, 45; white, 45; Diamond, 50; Granite, 60 p.c.

CORDAGE—Quotations are as follows: Rope, sisal, 7-16 and larger, basis, $11.25; Manila, 7-16 and larger, basis, $15.75; Lathyarn, $11.25; cotton rope, per lb., 21c.

SOLDER—Quoted at 27c. per pound. Block tin is quoted at 45c. per pound.

VISES — Prices are quoted as follows: "Peter Wright," 30 to 34 14½c.; 35 to 39, 14c.; 48 and larger, 13½c. per lb.

ANVILS—"Peter Wright" anvils are selling at 11c. per lb.

CROWBARS—Quoted now at 4c per lb.

POWER HORSE CLIPPERS — The "1902" power horse clipper is selling at $12, and the "Twentieth Century" at $6.00. The "1904" sheep shearing machines are sold at $13.60.

AMMUNITION, ETC.—Shot has been advanced 25c. per 100 lbs. Other prices are unchanged. We quote as follows: Cartridges, Dominion R. F., 50 and 5; Dominion, C.F., pistol, 30; military, 20; American R.F., 33⅓; C.F., pistol, 5 p.c.; C.F., military, 10 p.c. advance. Loaded shells: Dominion Eley's and Kynoch's soft, 12 gauge, black, $16.50; chilled, 12 gauge, $17.50; soft, 10 gauge, $19.50; chilled, 10 gauge, $20.50. Shot, ordinary, per 100 lbs., $7.25; chilled, $7.75; powder, F.F., keg, Hamilton, $4.75; F.F.G., Dupont's, $5.00.

IRON AND STEEL—We quote: Bar iron (basis), $2.70; Swedish iron (basis), $4.75; sleigh shoe steel, $2.75; spring steel, $3.25; machinery steel, $3.50; tool steel, Black Diamond, 100 lbs., $9.50; Jessop, $13.00.

SHEET ZINC — The price is now $8.50 for cask lots, and $9.00 for broken lots.

PIG LEAD—The pig lead market is still reported very firm and local prices are maintained steadily. The price is $5.25 per cwt. with a reduction of 25c. per 100 lbs. on ton orders.

AXLE GREASE—"Mica" axle grease has been advanced to $2.75 per case and "Diamond" to $1.60.

BLACK IRON PIPE—Quotations are: ¼ inch, $2.45; ⅜, $2.85; ½, $3.15; ¾, $4; 1, $5.75; 1¼, $7.85; 1½, $9.40; 2, $12.90.

GALVANIZED IRON — Quotations are: Apollo, 16 gauge, $3.90; 18 and 20, $4.10; 22 and 24, $4.45; 26, $4.40; 28, $4.65; 30 gauge or 10¾ oz., $4.95; Queen's Head, 24, $4.65; 26, $4.65; 28, $4.90.

TIN PLATES—We now quote as follows: IC charcoal, 20 x 28, box, $9.50; IX charcoal, 20 x 28, $11.50; XXI charcoal, 20 x 28, $13.50.

TERNE PLATES—Quoted at $9.00.

CANADA PLATES—Prices have been steady since the recent decline. We quote: Canada plate, 18 x 21, 18 x 24, $3.15; 20 x 28, $3.40; full polished, $3.90.

BLACK SHEETS—Prices are: 10 to 16 gauge, 100 lbs., $3.50; 18 to 22, $3.75; 24, $3.90; 26, $4.00; 28, $4.10.

PETROLEUM AND GASOLINE — Prices are quoted as follows: Silver Star, per gal., 21c.; Sunlight, 22c.; Eocene, 24c.; Pennoline, 25c.; Crystal Spray, 24c.; Silver Light, 22c.; gasoline, 70-72 (engine), 25½c., in barrels f.o.b. Winnipeg.

PAINTS, OILS AND TURPENTINE —Prices are now quoted as follows: White lead, pure, $7; bladder putty, in bbls., 2½cf; in kegs, 3¼c.; turpentine, pure, in barrels, 97c.; less than barrel lots, 92c.; linseed oil, raw, 64c.; boiled, 67c.

WINDOW GLASS — We quote: 16-oz. O.G., single, in 50-ft. boxes—16 to 25 united inches, $2.25; 26 to 40, $2.40. 16-oz. O.G., single, in 100-ft. cases — 16 to 25 united inches, $4.00; 26 to 40, $4.52; 41 to 50, $4.75; 51 to 60, $5.25; 61 to 70, $5.75. 21-oz. C.S., double, in 100-ft. cases—26 to 40 united inches, $7.35; 41 to 50, $8.40; 51 to 60, $9.45; 61 to 70, $10.50; 71 to 80, $11.55; 81 to 85, $12.60; 86 to 90, $14.75; 91 to 95, $17.30.

British Columbia Trade News

Vancouver, B.C., July 16, 1906.

The Dominion assay office in Vancouver has been instructed to change its charges heretofore maintained, making a reduction in favor of all gold which has paid the royalty in the Yukon, and which is accompanied by certificate to that effect from the comptroller at Dawson. The charges will now be ⅛th of one per cent. for assaying and stamping; 4c. per oz. parting and refining charge, 4c. per oz. alloy and toughing charge on 1-11th of the standard weight of gold in the deposit. These prices will have the effect of bringing more gold to the assay office and preventing in corresponding measure the shipment of gold to the U. S. assay offices.

* * *

With the demands from the prairie provinces and from farther east still coming in for lumber, the mills of the province are so far behind on orders that it is hopeless to attempt to catch up. Even local demand is impossible to fill. Every mill is running full capacity and orders are booked ahead for months to come. The indications are that the shortage in the Northwest is going to be a serious difficulty, especially in view of the great expansion of population by immigration this year. The conditions here do not point to any further immediate increase in price of lumber, as that is high enough now, but the mills simply refuse to take orders for any definite date of delivery. It is said on perfectly good authority that one big railway company is over 30,000,000 feet short so far this season of the quantities required for present work, which should be completed this year.

* * *

Building in Vancouver has kept up as well as possible under the circumstances though the difference is noted in that there are comparatively few residences being erected, most of the building be-

STOVE AND WESTERN NUMBER

Aug. 4 issue of Hardware and Metal will contain full illustrated report of Winnipeg Exhibition.

It will also contain review of the stove trade for the last year. We will give full description of all the new ideas stove manufacturers have adopted during the last year.

Manufacturers will find this number a specially good advertising medium.

ing brick and stone business blocks. Residentially viewed, Vancouver is entirely built of wood, and as lumber locally is so very high the building of houses on speculation has stopped this year. Only those are building who have contracts. Withal the rate of building is going to make a record season, despite all past experience. Construction is being so rapidly pushed that men are scarce and in big demand. Wages even for common unskilled labor have risen, and the city is now paying $2.50 per day of 9 hours for its street work. The rate of wages on all other work is in correspondence. None of the building trades have been making demands so far this season, and work is progressing without friction or labor troubles.

* * *

Northern shipments of freight are beginning to be very heavy, the Summer commodity rates, put on specially every season by the White Pass Railway Co., having been inaugurated. For six weeks or so they will be in force, and in that time the bulk of all goods for the Yukon will go forward. Just now material for the Dawson & Grand Forks Railway, under construction, is being shipped freely. Messrs. McLennan, McFeely & Co., Limited, have a large contract, and large quantities of ties have been got out by some of the coast mills to be shipped north.

* * *

Evidences are not wanting that many more saw mills will be built in the course of the coming year in the coast section of B.C. On the Fraser River, near New Westminster, especially, the purchase of water frontage which is adaptable for saw mills has been very active. Eastern and American capital has been investing, and several announcements have been made of projected mills, of which construction may be begun in the near future.

* * *

Salmon canners have been paying higher prices for their material for cans this year. Block tin, of which large quantities are used, has advanced 50 per cent., and solder 75 per cent., over last year's prices, and as preparations have to be made in advance it may be that they will have large quantities of cans put up, which they will not get salmon to fill. At the increased cost of materials it will have the affect of running up the price of this year's pack. As it is expected to be small, on the Fraser River at least, and as high prices to the men are already promised, the market price is almost sure to be very high. All materials for the canneries on the Fraser have been forwarded as the season has practically begun.

* * *

The Guggenheims, of New York and San Francisco, who are operating dredges in the Yukon on the largest scale of any concern in the northern camp, and who recently bought out the Cariboo Consolidated Hydraulic Mining Co., have already taken active steps in the large plans for extension of the water system of the property. A very large contract has been let to Messrs. Loss & Gzowski, who are at present engaged on the construction of the Nicola branch of railway for the C.P.R. The contract just awarded includes some twenty miles of ditch to bring water from farther sources than have so far been tapped in the hydraulic operations of this company, which is much the largest outfit operating in old Cariboo. The ditch is to be completed by Fall, so as to be ready for next season's operations. In all sixty miles or more of flume and canal will be dug before the complete plans for development have been carried out.

* * *

The plans prepared by J. A. L. Waddell, expert engineer, engaged to report on bridges for the City of Vancouver, have been adopted by the city, and when the by-laws authorizing the outlay are passed the engineer will be retained to take charge of construction. The principal bridge now being discussed is that at Granville street. A bascule type is adopted, and the cost is estimated in the neighborhood of $140,000. Two other bridges over False Creek are also to be built, and if one is voted on all will likely be.

* * *

In addition to the direct freight service maintained between this coast and the ports of Great Britain, by the Holt lines of steamers, familiarly known as the Blue and White Funnel lines, it is asserted that Andrew Weir & Co., of Glasgow, owners of the Eric line of freighters, will also enter into the carrying trade regularly between Pacific Coast and British ports. One of their steamers, the Duneric, has been in this port some weeks, being chartered to MacKenzie Bros. There is another, the Suveric, expected to sail from Glasgow.

* * *

The Hastings mill is loading sailing vessels with lumber cargoes at the rate of one a week, all large ships with a million feet or over in each. The British bark, Pass of Leny, is in the stream loaded and awaiting a crew. She has over a million feet of choicest fir for Capetown, South Africa. The British bark Duchalburn, and the British ship Inverclyde, are both consigned to the United Kingdom. The first has 1,712,000 feet, and the latter 1,350,000 feet. The American bark Makaweli sails this week for Japan with 1,100,000 feet for building factories in one of the port cities of Japan.

The steamer Aorangi reached port on Thursday with a shipment of Australian gold to the amount of $1,500,000. This gold was from the mines of Australia and was consigned to the San Francisco mint, to which it was shipped next day after its arrival. This is the second shipment from the same source, by the same line of steamers, and shipped to San Francisco.

* * *

Orders for a large proportion of the machinery intended for the pulp mill of the Canadian Pacific Sulphite Co., at Swanson Bay, up the coast, have been placed by J. M. Mackinnon, the managing director. A big logging outfit will also be put in to get out logs for the timber necessary to be used in the construction of the mill. The company will build, equip and operate its own saw mill. Two leading members of the company, which is almost entirely British in personnel, Messrs. E. E. Sawyer and John Yale, are now en route to British Columbia to take active superintendence of the work in conjunction with Mr. Mackinnon. All of the members of the company are well known in financial circles in London.

COST MARKS.

The most effective way to change a cost mark would be to use the same mark, but transpose it in such a way that it would not be recognized by those who now understand its working.

Suppose that your present mark is :

1 2 3 4 5 6 7 8 9 0
b l a c k h o r s e

Use the same characters or letters that are in black horse, only transpose them so that they will occupy different positions, like this :

1 2 3 4 5 6 7 8 9 0
c k a h o s l b e r

In marking your costs on your goods you can use these letters to represent the figures you want, but to further confuse anyone who should attempt to decipher your cost mark, use a key or blind. That is, suppose an article cost $1.50. Ordinarily we would mark it COR. To be confusing, however, we will add 6 to the first figure and mark it as though it cost $7.50, or LOR. If an article cost $4.75, we would not mark it HLO,. which would be the normal way of marking $4.75, but we instead add 6 to the first figure, making it $10.75 and marking it CRLO. In reading your cost mark you would know that 6 had always been added to the first figure, so that you could deduct this amount in order to arrive at the real cost.

Can Multiply or Divide.

There are a number of ways in which this idea of adding a blind figure can be applied to the same cost mark. You could instead of marking the actual cost of the merchandise, mark it as though it had cost twice the amount, and by drawing two lines under the cost mark indicate that the amount shown in the cost mark must be divided by 2 in order to arrive at the actual cost. You could mark it three times the actual cost, draw three lines under it and thus indicate that it was to be divided by three in order to ascertain the real cost.

You could employ a double system; that is, if an article cost $4.50, you could mark it like this : CKLO, and underneath this mark BKO. The first mark is $12.75, the second mark is $8.25, which means that $8.25 is to be substracted from $12.75 in order to ascertain the actual cost.

You see by this that there is no limit to the changes which can be run in, and perhaps for your purpose the best thing for you to do would be merely to use the same old letters or characters that you have been using, transposing them as we suggest to form a new cost mark, and then use any form of the keys or blinds that we have suggested in order to lead astray any one who thinks he knows your cost mark, but who would subsequently find out that he did not.

CATALOGUES AND BOOKLETS

When sending catalogues for review, manufacturers would confer a favor by pointing out the new articles that they contain. It would assist the editor in writing the review.

By mentioning HARDWARE and METAL to show that the writer is in the trade, a copy of these catalogues or other printed matter will be sent by the firms whose addresses are given.

Kerr Valves.

The Kerr Engine Co., of Walkerville, manufacturers of the Kerr valve and hydrant specialties, have just issued a new 64-page catalogue of their goods. The illustrations, printing, and cover are neatly gotten up, and the book is undoubtedly one of the most complete and valuable publications of its kind, and one which every steamfitter in Canada should have a copy of. Hardware merchants and fitters who desire a copy of the catalogue can secure one by forwarding their address to the Kerr Engine Company, while engineers and others interested in brass and iron valves can also secure copies of the book on request.

Brantford Screws.

The Brantford Screw Co. have issued a new catalogue of 56 pages and cover, the various departments being indexed according to the various qualifications of their manufacture. Each page is devoted to illustrations, lists, prices and approximate weight per gross of the various lines manufactured. These present all the various classes of screws, bolts, nuts, rivets, burrs and wires. The catalogue is well bound and neatly printed and most complete of its kind. The company announce that they are at present at work on a new plant which they hope to have completed by September next.

Attractive Metal Sign.

Henry Disston & Sons, Inc., Philadelphia, Pa., have brought out an attractive metal sign of the Disston hand saw. The striking feature of the sign is a carpenter of many years holding in his right hand a Disston saw. The man is shown in black and white, the saw in natural finish, and the circular background a bright red, making a sharp contrast. At the top of the sign appears "The saw that made Henry Disston famous with the carpenters," and below the picture the name and address of the concern. Outside the circle the background shows a marbelized effect. The whole sign is one that will attract attention in any store or in any place, and the dealer handling Disston saws should see to it that he has one of these signs conspicuously displayed.

Hardware Specialties.

The Erie Specialty Co., Erie, Pa., in their new catalogue show their entire line of hardware specialties. The 68-page book is well printed and attractively presents the numerous articles catalogued. Their well known line of cork pullers occupy many pages, followed by stopper lifters, ice picks, lemon squeezers, fruit juice presses, liquid shakers, ice shavers, vegetable mashers, champagne taps, ice cream dishers, soda water tumbler holders, etc.

Western Canada Factory, 797 Notre Dame Ave., Winnipeg, Man.

ASSIGNEE'S SALE

The Assignee of the estate of Pink & Co., will offer for sale by Public Auction, en bloc, at the store premises, No 279 Talbot Street St. Thomas, the entire Stock in Trade, consisting of Wall Paper, Paints, Varnishes, Mouldings, etc., valued at about $2,250.00, at the hour of 11 o'clock a.m. on Tuesday, July 31st, 1906. Stock sheets may be seen at the Office of R. H. McConnell, St. Thomas, Solicitor for Assignee.

R. J. MILLER, Assignee.

Dated, July 17th, 1906.

DISSOLUTION OF PARTNERSHIP

We, Fred B. Hope, of the town of Toronto Junction, in the County of York, hardware merchant, and Frank A. Noden, of the said Town of Toronto Junction, hardware merchant, the sole members of the firm of "Hope & Noden," heretofore carrying on business as hardware merchants at Number 2 Dundas Street East, Toronto Junction, under the style of "Hope & Noden," do hereby certify that the said partnership was on the twenty-third day of June A.D. 1906, dissolved by mutual consent.

Witness our hands at Torono Junction, this ninth day of July A. D. 1906.

Department of Railways and Canals, Canada

WELLAND CANAL
PORT COLBORNE ELEVATOR

NOTICE TO CONTRACTORS

SEALED TENDERS addressed to the undersigned and endorsed "Tender for Elevator," will be received at this office until 16 o'clock on Wednesday, the 15th August, 1906, for the construction and erection of an 800,000 bushel capacity Elevator at Port Colborne, Ont.

Plans and specifications of the work can be seen on and after this date at the Office of the Chief Engineer of the Department of Railways and Canals, Ottawa, and at the Office of J. A. Jamieson, Consulting and Designing Engineer, Board of Trade Building, Montreal, at which places forms of tender may be obtained.

In the case of firms there must be attached the actual signatures of the full name, the nature of the occupation and place of residence of each member of same, and, further, an accepted bank cheque for the sum of $25,000 must accompany the tender; this accepted cheque must be endorsed over to the Minister of Railways and Canals, and will be forfeited if the parties tendering decline entering into contract for work at the rates and terms stated in the offer submitted. The accepted cheques thus sent in will be returned to the respective parties whose tenders are not accepted.

The lowest or any tender not necessarily accepted.

By Order,
L. K. JONES,
Secretary.

Department of Railways and Canals,
Ottawa, July 6, 1906.

Newspapers inserting this advertisement without authority from the Department will not be paid for it.

FOUNDRY AND METAL INDUSTRIES

Fire did $800 damage to the Hamilton Brass Manufacturing Company's molding shop last Monday.

Glencoe has carried a by-law granting $3,000 to the Aldred Foundry Company, who will employ 25 skilled hands.

The Grand Trunk Pacific Railway have been granted power to issue stock to the amount of $25,000,000 for buying equipment of rolling stock.

The Brandon Machine Works Company have decided to erect a new building and install considerable new machinery for the making of gasoline engines and similar machines.

The Moose Jaw Machine Works are to establish a modern foundry with a blast furnace of large capacity. The company contemplate undertaking steel bridge building in the future.

Voting on the by-law to exempt the Central Foundry Company from taxes at Port Hope on Monday resulted in a majority of 142 over the requisite two-thirds vote. Only two electors voted against the by-law. The Central Foundry Company is a new institution, financed by American capital. It will employ a large number of men and has a capital of $250,000. It will spend immediately several thousands of dollars in improvements to the buildings, which it rents from the town, and will commence manufacturing within three months. Within the first year it will pay out at least $25,000 in wages.

STEEL BUILDING CONSTRUCTION.

Discussing the future of iron and steel, and coal and coke, the June number of the Cent Per Cent Magazine says: "If every new building erected in the new city of San Francisco shall have a skeleton of steel, the whole amount of steel consumed will form but an inconsiderable fraction of the steel output for 1906-07. It is not the fact that San Francisco will rebuild of steel that counts, but the reason lying back of the fact. When the city had ceased its shaking, buildings of brick and stone had collapsed, but wherever the frame work of a building had been of steel, although the terra cotta filling had been shaken out, yet the steel skeletons remained intact, silent but eloquent witnesses to the fact that they had successfully defied the power which had easily wrecked all else. Structural steel skeletons, standing in their strength, towering alone uninjured amidst the desolation and flame and smoke of the once great city, declared the conquering genius of science able to withstand the forces of even an earthquake's fiercest shocks. This is what counts, that we now know that steel buildings will endure the most terrible of nature's forces, the earthquake. We know it because we have proved it. Mexico is also in the earthquake zone, and there, too, they have learned the value of steel in construction work to guard against disaster. In Mexico City the Government is at work on a palace for its senate, chamber of deputies and national library that has been specially designed to resist earthquake shocks. But there is another industry which must develop side by side with the iron and steel industry, because steel is impossible without coal and coke; and here again the United States as the chief soft coal country in the world, will dominate the trade; and the main interest centres in West Virginia, already the second bituminous coal state in the Union, and destined, without any question, to become the first. New mines are being opened up all over that state, towns are springing into being, and railroad companies cannot lay their glistening parallel rails fast enough to meet the needs of the coal companies' output. Coal and coke are the first essential of manufactures of every kind, and not agriculture, nor steel, nor any other industry is more than comparable to coal and coke as a source of wealth."

The Successful Paint Dealer

aims to get the best results in the easiest and quickest way, to please his customers and make a good profit for himself. This can be accomplished by selling the

SHERWIN-WILLIAMS ALUMNIUM PAINT

for engines, radiators, boilers, steam pipes, and all metal surfaces where a bright, lasting silver finish is desired. This paint will always give the most satisfactory results—to painter and customer.

Sherwin-Williams Aluminum Paint has all the economical qualities of a good aluminum paint. It covers most surface, flows smoothly and evenly under the brush and gives a beautiful silvery appearance.

Sherwin-Williams Aluminum Paint has no offensive bananna-like odor, which is so objectionable in other paints of this kind.

OTTAWA FOUNDRY SOLD.

The property of the Ottawa Furnace & Foundry Company, which has been in liquidation for some time, was sold on Friday of last week for $47,500. When tenders for the purchase of the plant were called for, several offers were received, some being for the entire outfit and some for only a part. At a meeting held recently it was decided to adjourn the sale until July 21, but on Friday last Messrs. F. G. Travers, of Montreal, and George Tomlinson, of Ottawa, told those interested that they would withdraw their offer unless it was accepted that day. They had options in other cities, and had to know at once.

Another meeting of the stockholders and creditors was immediately called, and it was decided to sell the property to the gentlemen mentioned. The next best offer was about $42,000, and two or three others were received, but the price in each case was low.

GUARANTEES ON PAINT.

In connection with the article regarding Seroco paint published in Hardware and Metal of last week, the following letter on paint guarantees has been written by G. B. Heckel, Philadelphia, secretary of the Paint Grinders' Association of the United States. He says:

"In reading the 'guarantee' on Seroco paint I am reminded of a certain national party chairman, who instructed his lieutenants to 'claim everything.'

"About the only thing I can think of that is not guaranteed by this 'guarantee' is the common sense of the man that allows himself to be beguiled by it. The man who could devise a paint which he could seriously guarantee that 'at the end of seven years it would look better than any other paint at the end of two years,' would be a genius that would make Sir Isaac Newton look like a beginner in the kindergarten.

"The principle on which all such extravagant guarantees are based is, of course, the law of averages. Only a negligibly small percentage of those misled by them will take the trouble to attempt to recover under the terms of the guarantee.

Like Patent Medicines.

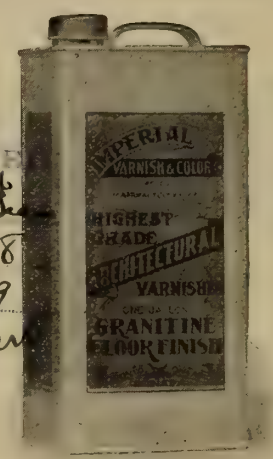
"Recently, as anyone reading current advertising must have realized, there has been a wild competition in extravagance of paint guarantees, one house going so far as to offer to give the paint to the consumer if, after application, it does not satisfy. This is very much like the guarantee of the patent medicine manufacturer, who offers to refund the money of his victim 'if it harms the most delicate constitution.'

"The paint in question has been reported by a state chemist to contain, among the pigments of the white base, nearly 35 per cent. of carbonate of lime and over 23 per cent. of barytes, while of the liquid portion 24 per cent. is reported as water. Any practical paint authority will at once realize that the total of 'inert' matter, as represented by the lime and barium compounds (whiting and barytes) is much too high for good results, while the high proportion of water at once indicates its character as an alkaline emulsion paint. Such emulsion paints, the unfortunate experience with which is the chief cause of the suspicion with which 'patented paints' are still regarded, had practically passed out of use until they were revived by the mail order houses, who saw in them a maximum of profit at a minimum of risk.

Different Positions.

"Accepting the analysis of this paint referred to as correct, I do not believe there is a manufacturer in the United States, selling through local dealers, who would have the temerity to guarantee it to wear well for six months. Claims for damages and charges for repainting would swamp him inside of a year. But the mail order house is far away and impersonal. Its only agents are catalogues, circulars and advertisements, which can neither 'sue nor be sued.' There are few rural purchasers who have the enterprise, the knowledge or the money to bring suit for recovery against a corporation in a foreign state, and therefore it is 'safe' as a general thing to 'claim everything' and take the chances.

"Now, as a matter of fact, paint is a very personal thing. Next to our food, our clothing and our furniture, it is about the most personal thing with which we have to do. We live with it, we see it daily, and it is either a daily delight or a constant eyesore. The consumer, in the nature of things, cannot be expected to know much about it. Like the reports of the weather bureau and the markets, he must take it on faith. But faith without foundation is meaningless and foolish. And what legitimate foundation for faith can there be in the extravagant and obviously ridiculous 'guarantee' of an unknown mail order house, whose only guarantee of good faith and sincerity is what it says of itself in order to get our patronage and our money?



"After sifting it all down to 'hard-nails,' the only sound basis for the faith necessary to judicious selection of paint is the reputation of the manufacturer — not his financial standing, for financial responsibility is no gauge of verbal accuracy—the reputation of the manufacturer for making good paint and for 'making good.' Added to this, the known standing of the local dealer, who is accessible when anything goes wrong, and to whom the manufacturer of the goods is directly responsible in like case.

"There are dozens of good mixed paints on the market, made by reputable manufacturers and sold through responsible dealers. Why should the consumer play the part of the crow in the fable and drop his piece of cheese for the first flattering fox?

"There is a point in such guarantees which may have escaped your notice. The business being conducted principally through the United States mails, are not these concerns amenable to the laws controlling the use and abuse of this federal convenience?"

We have all heard of the man who was killed by kindness—but the proof is lacking.

Most of us have trusted to luck so often that there ought to be a good deal owing to us.

PAINT AND OIL MARKETS

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, July 21, 1906.

The Canadian paint and varnish trade is beginning to experience the customary mid-summer quiet. Even so, however, the demand is exceedingly good and quite in excess of the corresponding season's last year.

White lead is probably the article most in demand at present. Producers, however, find no difficulty in keeping up their supply.

Conditions in Paris green are quite different. As noted last week, stocks in maker's hands are exhausted and quotations are consequently withdrawn. From the brisk demand that still exists it would appear that there are many dealers who were unable to procure sufficient stock.

The slight reduction in spelter has not affected zinc white, which is still very firm. Shellac is also very strong and is advancing on foreign markets.

LINSEED OIL—No further change in price has occurred since our last report. Some jobbers consider the figures we are quoting as too low, but they are the prices generally ruling in Montreal. We quote: Raw, 1 to 4 barrels, 52c.; 5 to 9 barrels, 51c.; boiled, 1 to 4 barrels, 55c.; 5 to 9 barrels, 54c.

TURPENTINE — The market has steadied considerably and the price is now firmly held at the following quotations: Single barrels, 86c. per gallon; two barrels or over, 85c. per gal.; for smaller quantities than barrels, 5c. extra per gal. is charged. Standard gallon is 8.40 lbs., f.o.b. point of shipment, net 30 days.

GROUND WHITE LEAD — We quote: Best brand Government standards, $6 to $6.25; No. 1, $5.65 to $5.90; No. 2, $5.30 to $5.65; No. 3, $5.05 to $5.30, all f.o.b. Montreal

DRY WHITE ZINC—Prices are very firm and we are quoting as folows: Red seal, 7c. to 8c.; French V.M., 6c. to 7c.; Lehigh, 5c. to 6c.

WHITE ZINC (ground in oil — We quote: Pure, 8c. to 9c.; No. 1, 6½c. to 7½c.; No. 2, 5½c. to 6½c.

PUTTY—Our quotations are: Pure linseed oil, $1.75 to $1.85; bulk in barrels, $1.50; in 2-lb. irons, $1.80; in tins, $1.90; bladdered putty in barrels, $1.75.

ORANGE MINERAL—We quote as follows: Casks, 7¼c.; 100-lb. kegs, 7½c.; smaller quantities, 8½c.

RED LEAD—Somewhat easier conditions prevail. Prices, however, remain as follows: Genuine red lead in casks, $6; in 100-lb. kegs, $6.25; in less quantities at the rate of $7 per 100 lbs.; No. 1 red lead, casks, $5.75; kegs, $6, and smaller quantities, $6.75.

GUM SHELLAC—The market in foreign countries is very firm and is advancing. We quote as follows: Fine orange, 55c. per lb.; med. orange, 50c. per lb.; bleached shellac (white), 60c. per lb.

SHELLAC VARNISH — We quote: Pure white, $2.90 to $2.95; pure orange, $2.70 to $2.75; No. 1 orange, $2.50 to $2.55.

MIXED PAINTS—Prices range from $1.20 to $1.40 per gallon.

CASTOR OIL—Conditions are steady and prices are firmly maintained for both present and forward shipment. We quote: Firsts in cases, 8 1-2c.; in barrels, 8c.; seconds in cases, 8c.; in barrels, 7½c.

REFINED PETROLEUM — We quote as follows: American water white, 17c.; Canadian prime white, 15½c.; astral, 20c., ex warehouse.

PARIS GREEN—This line is still in active demand, but as Canadian makers have exhausted their supplies all quotations are withdrawn.

GASOLINE—The ruling quotation at present is 24c. in bbls.

BENZINE—Market is steady at 24c. in bbls.

WINDOW GLASS—We quote: First break, 50 feet, $1.85; second break, 50 feet, $1.95; first break, 100 feet, $3.50; second break, 100 feet, $3.95; third break, 100 feet, $4.25; fourth break, 100 feet, $4.50; fifth break, 100 feet, $4.75; sixth break, 100 feet, $5.25; seventh break, 100 feet, $5.75; eighth break, 100 feet, $6. Diamond star, first break, 50 feet, $2.05; second break, 50 feet, $2.25; first break, 100 feet, $3.90; second break, 100 feet, $4.30; third break, 100 feet, $5.25; fourth break, 100 feet, $6; fifth break, 100 feet, $7; sixth break, 100 feet, $7.50; seventh break, 100 feet, $8.50. Double thick, first break, 50 feet, $3.20; second break, 50 feet, $3.50; first break, 100 feet, $6.25; second break, 100 feet, $6.50; third break, 100 feet, $8.25; fourth break, 100 feet, $9.50; fifth break, 100 feet, $11; sixth break, 100 feet, $12; seventh break, 100 feet, $13.50; eighth break, 100 feet, $16; ninth break, 100 feet, $17.50; tenth break, 100 feet, $19.50; eleventh break, 100 feet, $23.50; twelfth break, 100 feet, $28.

Many people who are first to say of a dead friend, "He was a good fellow," were the last to find a worthy feature in the living character.

THE CANADA PAINT COMPANY LT'D

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East.
Toronto, July 20, 1906.

As perdicted, linseed oil dropped 1c. during the week, but with this exception all prices have held very firm. Quotations on Paris green have been withdrawn owing to the practical exhaustion of the stocks in hands of jobbers, so great has been the demand during the past month or so.

White lead is in great demand, but jobbers' stocks are satisfactory and there is no likelihood of a shortage. Turpentine remains firm at last week's quotation.

Business continues very brisk for this season of the year and dealers have every reason to feel satisfied with the trade being done.

WHITE LEAD— Ex Toronto, pure white, $6.30; No. 1, $5.92 1-2c.; No. 2, $5.55; No. 3, $5.30; No. 4, $5.05 in packages of 25 pounds and upwards; 1-2c. per pound extra will be charged for 12 1-2 pound packages; genuine dry white lead, in casks, $5.40.

RED LEAD—Genuine in casks of 500 lbs., —$5.75; ditto, in kegs of 100 lbs., $6.60; No. 1 in casks of 500 lbs., $5.50; ditto, in kegs of 100 lbs., $5.75.

DRY WHITE ZINC—In casks, 7c.; in 100 lbs., 7 1-2c.; No. 1, in casks, 6c.; in 100 lbs., 6 1-2c.

WHITE ZINC (ground in oil)—In 25-lb. irons, 8c.; in 12 1-2 lbs., 8 1-2c.

SHINGLE STAIN—In 5-gallon lots, 75c. to 90c. per gallon.

PARIS WHITE—90c. to $1 per 100 lbs.

WHITING—60c. to $1 per 100 lbs. Gilders' whiting, 75c.

PARIS GREEN— Canadian Government standard, 600-lb. barrels, 19 1-4c.; 20c.; 25-lb. drums, 20 1-2c.; 1lb. packages, 21c.; 1-2 lb. packages, 23c.

SHELLAC VARNISH— Pure orange in barrels, $2.80; white, $2.90 per barrel; No. 1 (orange), $2.25.

LINSEED OIL—Our quotations are: Raw, 1 to 4 barrels, 54c.; 5 to 9 barrels, 52c.; boiled, 1 to 4 barrels, 57c.; 5 to 9 barrels, 55c. Toronto, Hamilton, London and Guelph; net 30 days. Advance of 2c. for delivery to outside points.

TURPENTINE—Single barrels 85c.; 2 to 4 barrels, 84c., f.o.b. point of shipment, net 30 days. Less than barrels, 90c. per gallon.

GLUES—Broken sheet, in 200-lb. barrels, 5 to 25c. per lb.; cabinet glue, in barrels, 11 1-2c. to 12c.; emery glue, in barrels, 15c.; bookbinders' ground, 11 1-2c.; finest American white 19c. per lb.; No. 1 American white, 15c. per lb.

PUTTY—Ordinary, bladders in barrels, $1.80; pure linseed oil, $2 to $2.10; bulk, in 800-lb. casks, $1.50; pure, $1.95 to $2; 100-lb. kegs, 25c. extra.

LIQUID PAINTS— Pure, $1.20 to $1.35 per gallon; No. 1, $1.10 per gal.

BARN PAINTS—70c. to 80c.

BRIDGE PAINTS—75c. to $1.

CASTOR OIL—English, in cases, 9½c. to 10c. per lb., and 11c. for single tins.

REFINED PETROLEUM—Trade continues normal. We quote: Canadian prime white, 14c.; water white, 16c.; American water white, 16c. to 18c. ex warehouse.

CRUDE PETROLEUM— We quote: Canadian, $1.38; Pennsylvania, $1.64; Ohio, 98c.

VALUABLE WOOD PRESERVATIVE

The proper treatment of timber so as to render it immune from rot and decay is a subject of great importance. A wood preservative which does its work well can be put to an infinite variety of uses, each of which may be counted upon to save money for those who use it. Ties, spiles, harbor work, vessel hulls and paving blocks are only a few of the things which can be economically treated in this way. In fact, all timber which is in contact with or in the ground will last much longer as a result.

A valuable wood preservative is controlled by the Carbolite-Carbolineum Company, who have offices in the Manning Chambers, Queen street west, Toronto. This company publish a beautiful catalogue dealing with the various uses of their product, and they will be pleased to send a copy of it to interested parties who mention Hardware and Metal in inquiring for it.

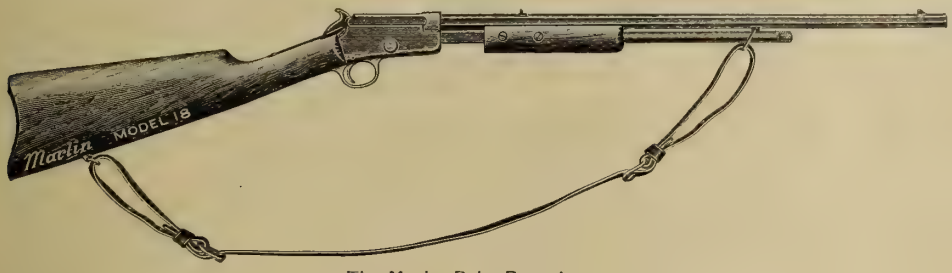
PAINTING BY MACHINERY.

The air brush for touching up solar prints has been long familiar in photographic enlarging studios, but the same principle is now applied to a much larger task. At the shipbuilding yards at Devonport, England, compressed air is used to spray paint on the hull of a boat, two men applying the coat in the same time that twelve ordinary painters would require, and doing a much better job, since with the air pressure it is possible to apply the paint more evenly. In addition to the saving in the cost of the painters, less paint is required for each coat, and it is declared that the process is bound to extend to all shipyards within a short time. The idea suggested itself to the foreman of the yard while watching the mechanics working with the compressed air riveting machines.

ELECTRIC FILLING MACHINE FOR PAINTS.

An ingenious little machine has recently been introduced in connection with the filling of paints, enamels, varnishes, and similar materials into the tins. The apparatus consists of an ordinary beam scale with platform. On the platform is placed the can to be filled, and the exact weight at which it is desired the can when filled shall turn the scale is carefully adjusted on the beam. Above the mouth of the can is fixed a pipe connected with the supply of material which is being canned off. The electrical appliance consists of a small motor

coupled up with the electric current which passes through the beam. As soon as the beam rises owing to the platform falling with the weight of the can and its contents, a circuit is made, and an automatic cut-off acts at the end of the supply pipe, instantly stopping the flow. Hence, while the can contains full weight (according to the point at which the weight on the beam is fixed) it contains the merest fraction more, and a very considerable saving is effected. All who have had to do with the calculation of sources of loss in manufacturing practice, says the Oil and Colorman's Journal, are aware how serious an item overweight is liable to become. This little appliance would appear to be likely to save such leakages, besides effecting a considerable saving in time.



NOVELTIES FOR THE HARDWAREMEN

Readers desiring the addresses of the manufacturers or jobbers of the articles described, or any additional information, can secure the same from the Editor of HARDWARE & METAL.

MARLIN BABY REPEATER.

The Marlin Baby Repeating rifle, Model No. 18, shown in the accompanying illustration, is designed to do everything that is necessary in a .22 repeater, to be of the very best quality and to sell at the lowest price possible.

The barrels are made of first quality open-hearth gun barrel steel, having a tensile strength of from 60,000 to 80,000 pounds to the square inch. The frames are drop-forged from best quality open-hearth gun frame steel. The buttstocks and forearms are all made of black walnut, air seasoned and dried in the company's sheds from two to four years, then kiln dried before going into the wood shops.

The Marlin Baby Repeater.

This rifle is made with a visible and not a concealed hammer, and is not made take-down. On account of the now well known solid top and side ejecting principle first given to the public by the Marlin company and used by them on all of their arms since 1889, water runs off instead of into a Marlin action, and dust, sand, twigs and the like find no place for lodgment.

The breech mechanism consists of two pieces only, the breech bolt and the locking bolt. The locking bolt is pivoted in the breech bolt in such a manner that, while the rear part of the locking bolt is up within the breech bolt while

Sectional View Showing Construction.

the action is open, this portion of the locking bolt drops down against a section of the frame just as soon as the action is closed—the simplest and at the same time the most effective means of breeching up a gun. The locking bolt and firing-pin are so adjusted that it is impossible for the cartridge to be exploded by the firing-pin until the cartridge is in the chamber and the action fully closed and locked. The action can be opened only when the firing-pin is forward. The action is operated by moving the left hand backward and forward $1\frac{3}{8}$ inches only. This extremely short motion allows of quick operation and very little disturbance of the air between shots.

Many calls having come from trappers, campers, cyclists, canoeists and others for this little .22 fitted with sling, the company can, at a slight additional charge, now furnish it fitted with swivels and sling strap as shown by the accompanying illustration. Another feature of interest is the fact that, if the rifle is loaded with the short cartridges and a long range shot is presented, the shooter can, with the action open, remove the short cartridge from the carrier and insert a long-rifle cartridge directly into the chamber. He can then do accurate and effective work at ranges up to 200 yards.

DANA FOOD CHOPPER.

The Dana food chopper, made at Cincinnati, and illustrated herewith, has only two parts to clean—rotor and shell. It has a very large cutting capacity and the cutters are self-sharpening, cutting at an oblique angle instead of square. Three rotors, one for each kind of cutting, will cut, chop or pulverize any food used in the kitchen. Each rotor has a conducting spiral of its own, all one piece, so that food is fed properly for the article chopped, which makes the pieces uniform and makes mashing impossible, while all juices are retained. Three rotors are enough to chop (to whatever size desired) meat of all kinds, raw or cooked; fruit and vegetables of all kinds, and coffee. Rotor No. 63 grinds coffee as well as does any coffee grinder, and can pulverize it, which the coffee grinder does not do. When rotor is removed, shell is open, free for cleaning. No uncut food is left in machine, no drip, no waste.

The Dana Food Chopper.

CANADA PAINT IN THE WEST.

Robert Munro, managing director of the Canada Paint Co., Montreal, spent Wednesday in Toronto on his way home from Winnipeg, where he has been during the past month arranging for the further development of his company's business in the west. Ed. G. Padden, of the Toronto store, is now calling on the trade in Manitoba and the new provinces, and will make his headquarters in Winnipeg in future.

Additions are being made to the linseed oil plant purchased about a year ago, and contracts have already been let for some of the work in connection with the new paint and varnish plant to be erected this Summer. The company purposes to spend in all about $160,000 in their Winnipeg plant, and having their own Manitoba linseed oil, which they consider the best in the world, they have every reason to look for tremendous growth in their western trade. Special machinery is now being manufactured and will be installed in the new buildings November 1, it being the intention to operate the mills after that date, in order to be able to supply the large trade looked for next year.

ONTARIO TURPENTINE INDUSTRY.

According to a report from Barrie's Bay, Ont., a site has been purchased for the establishment of a turpentine industry at that place. It is said that several buildings will be erected and a complete plant installed at which between 60 and 70 men will be employed.

CUT OUT WORRYING.

Don't worry about your competitor. Cut out the worrying and put your whole mind on your business. Then he will do the worrying for you. Remember the sales manager's advice to the green traveling man: "Never mind what our competitors are doing; what the ——— are you doing?"—The Hardware Trade.

A great injustice is often done ability by its confinement to a condition which affords no scope for development.

Never jump at a conclusion or opinion beyond your experience; approach it only with careful diplomatic discretion.

BUILDING AND INDUSTRIAL NEWS

HARDWARE AND METAL would be pleased to receive from any authoritative source building and industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories, foundries or other works, railway or mining news. All correspondence will be treated as confidential when desired.

The machinery at Peat Works at Port Francis has been installed and work will commence at once.

The Frontenac Gas Co. is to establish a new gas plant at Quebec in opposition to the existing company.

The Fredericton, N.B., Gas Co. are to spend $10,000 this Fall in improving their electric lighting plant.

The Banwell-Hoxie Fence Co., of Hamilton, are to build an addition to their factory to cost $2.500.

A new factory is to be established in Brantford to occupy the works to be vacated by the Brantford Screw Co.

The Peterborough Shovel & Tool Co. have decided to erect a new brick warehouse, 40 x 100 feet, at a cost of $3,000.

Sir Thomas Lipton is said to intend to spend $2,000,000 in the establishment of a meat packing industry at Winnipeg.

Norwich, Ont., is to vote on a by-law to grant a loan of $5,000 to West, Taylor, Bickle & Co., broom manufacturers.

The McKinnon Dash & Metal Works Co. have reduced the amount of their common stock from $400,000 to $100,000.

The factory of the Brantford Roofing Co., Brantford, is now running to its full capacity, twenty men being employed.

The Canadian Northern Railway has purchased the Qu'Appelle, Long Lake & Saskatchewan Railroad, giving them access to Regina.

Winnipeg proposes to establish a municipal power plant and the city engineer is preparing plans for a power plant at Lac du Bonnet.

The Smart Bag Co., of Montreal, are having a three storey factory built for them near Charlevoix on the main line of the Grand Trunk Railway.

The Brien Heater Co. organized at Welland recently by Niagara Falls men has secured the factory buildings of the Niagara Metallic Furniture Co. at Welland.

Work has commenced on the erection of the new glass factory at Cayuga, and the contract calls for completion of the first building, 54 x 216 feet, within six weeks time.

The Canadian Niagara Power Co. announces that there is no demand in Canada for their power and it is their intention to export all the power produced to the United States.

The Canadian Cutlery Co. are completing arrangements with the City of London for a factory building, offering various inducements, and the company guarantees to employ 100 hands.

The St. Lawrence Supply Co., Montreal, whose plant has been in operation about five months, are doing a large business in manufacturing equipment and supplies for railway contractors.

Rhodes, Curry & Co., Amherst, N.S., have secured a contract from the Grand Trunk Pacific for 2,500 cars, the value of which will be $2,000,000. The contract is to run over a term of five years.

Evans, Coleman & Evans, Vancouver, B.C. are to establish a cement plant near Kendall, Washington, to supply the increasing demand of the Pacific Coast owing to the rebuilding of San Francisco.

An automobile company is to be established at Welland by J. F. Mills, of Buffalo. The company agrees to spend $12,000 in plant and employ forty men in return for certain inducements given by the town.

Montreal capitalists are said to be making arrangements to exploit marl deposits on the White Whale Lake Indian Reservation near Edmonton, for the purpose of establishing a large cement plant.

The Verity Plow Co. Brantford, are to erect a three storey addition to their warehouse at Brantford at a cost of $3,000, and a large quantity of modern machinery will also be installed in order to allow the capacity of their plant to be doubled.

English capitalists represented in Canada by J. M. MacKinnon, are to develop a pulp industry at Swanson Bay, on the northern coast of British Columbia. Machinery is now being purchased, and preparations made to get the plant in working order as soon as possible.

The Stevens-Hepner Co., has been organized with headquarters at Port Elgin. The company will manufacture brushes, woodenware, etc. The capital stock amounts to $150,000, the directors being H. H. Stevens and Jno. Hepner, of Port Elgin, and C. M. Bowman, of Southampton.

The recently organized Supreme Heating Co. may decide to locate their proposed stove foundry at Toronto Junction, although Owen Sound is the headquarters of the company. The company will manufacture stoves with attachments whereby a complete combustion is claimed to be produced and a large saving on fuel made. The device was patented by W. R. Hampden, recently of San Francisco.

BUILDING NOTES.

J. A. Hallier is erecting a $4,000 residence at Edmonton.

A $10,000 school is to be built at Swift Current, Man.

Ambrose Wilcox is erecting a store and office building at Saskatoon.

The Montreal Steel Works are to erect a warehouse to cost $14,800.

Building permits in Winnipeg so far this year total over $7,000,000.

Petrolia Gas Company are to build a large gas plant at that town.

Hoge & Thompson are erecting a store at Saskatoon to cost $25,000.

The Grand Trunk Railway Co. are to build a power house at Sarnia.

The Grand Trunk Railway Co. are to erect a new station at Walkerton.

The Northern Bank are to build a branch bank building at Melita, Man.

The Brackman-Ker Company are to erect a $12,000 store at Edmonton.

D. C. McKinnon, Winnipeg, is to build a four-storey hotel at Dauphin, Man.

The Tribune Publishing Co. are erecting a business block at Sackville, N.B.

Lougheed Bros., Winnipeg, are building a new Roman Catholic church in that city.

Calgary's building record for the first six months this year amounted to $821,000.

The T. Eaton Co. are to build another factory to cost $30,000, at Toronto.

Charles Proctor is to build a residence at Toronto Junction to cost $2,200.

Thos. Allen, Hamilton, is to erect three brick houses in Hamilton to cost $51,000.

The Jamieson Avenue Collegiate, Toronto, is to be enlarged at a cost of $34,500.

A large steel bridge with concrete abutments is being erected at Stellarton, N.S.

The National Club, Toronto, is to erect a four-storey club house to cost $115,000.

Geo. Morrison, general merchant, Callender, is erecting a two-storey store at that place.

The British Columbia Railway Company are to erect large new car barns in Vancouver.

Revillon Bros., hardware merchants, Edmonton, are to erect a warehouse to cost $1,200.

R. Howson is preparing plans for a $40,000 business block to be erected at Revelstoke, B.C.

Miller Cartage Company, of Toronto, are to erect a large storage warehouse on Dupont street.

The Centennial Methodist Church congregation, Toronto, are to erect a new brick church to cost $30,000.

The Moose Jaw, Sask., Y.M.C.A. has purchased a site for a large building which they will erect shortly.

The Swan River Hotel Co. have been organized with a capitalization to build a hotel at Swan River, Man.

Contracts have been awarded for additions to the Ontario Agricultural College, Guelph, amounting to $5,000. A new chemical building to cost $10,000 will be erected later on.

TRADE INQUIRIES.

Correspondents desiring to get in touch with any of the firms referred to should quote the reference number when requesting addresses. For information write to Superintendent of Commercial Agencies, Department of Trade and Commerce, Ottawa.

834. Corrugated flues for ships, etc.—A British engineering firm manufacturing corrugated flues for ships' boilers, etc., desire to extend their trade to Canada, and invite correspondence.

838. Woolen and cloth rags.—A Yorkshire firm manufacturing all kinds of mungo and shoddy desire to hear from Canadian buyers, and also inquire for Canadian shippers of all kinds of woolen and cloth rags.

839. Soft rags.—A Yorkshire firm desire to get in touch with Canadian importers of all kinds of woolen, cloth and soft rags, also clippings, and invite correspondence from buyers.

840. Woolen mungo rags.—A Yorkshire firm ask to be put in communication with Canadian buyers of new and old woolen mungo rags, and would appoint a suitable agent for Canada.

841. Leather belting, etc.—A Yorkshire firm manufacturing all kinds of leather belting, hydraulic and mechanical leathers, picking bands, and loom requisites, rubber, leather and dynamo and elevator belting, ask to be put in communication with Canadian buyers, and are open to appoint a suitable firm as their agent in Canada.

844. Carbide of calcium.—Inquiry has been made by a Scottish firm for names and addresses of Canadian manufacturers and exporters of carbide of calcium.

849. Engineers' tools. — A company manufacturing engineers' tools of various kinds would like to get into touch with Canadian importers.

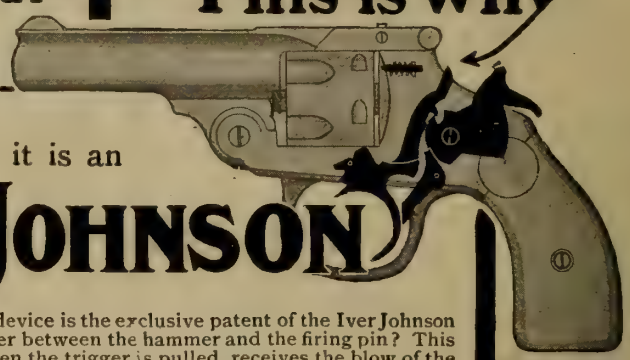
851. Ores.—A firm in Frankfort-on-Main, Germany, wishes to get into correspondence with Canadian shippers of ores of all kinds, particularly iron and copper pyrites, galena, zinc-blende and antimony.

871. Boilers.—A Yorkshire engineering firm, manufacturing high pressure boilers of every description, ask to be put in communication with Canadian buyers.

873. Lubricating oils, etc.—A large Yorkshire firm desire to get in touch with Canadian buyers of lubricating oils and engine rod packing.

853. Roofing felt, roofing and insulating paper, etc.—A German firm desire to get into touch with Canadian manufacturers of roofing felt, roofing and insulating papers and sheathings, for the purpose of purchasing same.

878. Structural iron work, etc. A Yorkshire engineering firm manufacturing shafting and mill gearing, rolled iron joists, wrought iron girders, wrought iron roof and structural iron work, invite correspondence and negotiations.



862. Varnish.—Manchester firms dealing largely in oils and paints, wish to obtain prices of spirit and oil varnish, from Canadian manufacturers.

WOOD SASH PINS.

An Ontario hardware merchant desires to purchase some wooden sash pins, seven-eighths, one, and one and one-eighth inches in size. Can any reader of Hardware and Metal advise us where these goods can be purchased ?

Accidental Discharge Impossible—

This is why

True only if it is an

IVER JOHNSON

The positive safety device is the exclusive patent of the Iver Johnson Revolver. See the lever between the hammer and the firing pin? This lever is raised only when the trigger is pulled, receives the blow of the hammer and transmits it to the firing pin. **That's why** you can throw a loaded Iver Johnson against a stone wall without fear—no discharge can possibly follow, as the hammer **never** touches the firing pin. An Iver Johnson never fails when you **pull the trigger** and never "goes off" when you don't.

Iver Johnson Safety Automatic

Prices—Hammer $6.50, Hammerless $7.50.

Iver Johnsons are sold by dealers the world over, or direct from us if your dealer won't supply

Please send for descriptive catalogue, free upon request. It tells all about it.

IVER JOHNSON'S ARMS AND CYCLE WORKS, FITCHBURG, MASS.

RUBBER BANDS FOR PACKAGES.

The rubber band has, to a certain extent, supplanted the twine and cord for store use, but one of the objections raised against the circlets of elastic is that it is not possible to make an attractive package with them as with the fancy kinds of cord. In order to overcome this drawback, the bands have been recently put on the market in very artistic colorings, which are quite as gaudy as anything which has ever been secured by the twine maker, instead of being limited to the usual grey color. These bands are made in various colors and designs, the effects being mostly in stripings of different colors.—Kuhlow's German Trade Review.

RUBBER COMPANY'S PICNIC.

The complimentary picnic tendered by the management of the Canadian Rubber Company, Montreal, to their employes, took place on Saturday, to Berthier. Two steamboats, the Berthier and Three Rivers, had been engaged for the outing, and so as not to separate the party they were both lashed together, which is a very unusual occurrence on the St. Lawrence, though frequent enough on certain American rivers. The start was made from the wharf, at the foot of the company's factories, at about nine o'clock, and the party numbered about 1,600.

Berthier was reached shortly after one o'clock, and the whole population of the town was drawn up on the wharf to receive the excursionists. Flags and bunting were also to be seen, and across the streets at several points were stretched streamers bearing the legend "Welcome." The sports of the day were held at Cuthbert Park, some distance outside the town, and they were carried out to the general satisfaction and amusement of all.

CHILDREN AS TRADE GETTERS.

An enterprising southern merchant recently distributed the following circular to the school children in the schools in his district :

"Experience proves that one-fourth of all the goods sold over the counter are purchased by children, and the merchant who ignores these little shoppers is indeed pursuing a short-sighted business policy. We intend that every child in our town shall become a 'booster' for this business, and in order to accomplish this we are going to make them silent partners in this business. Here's the plan : To any boy or girl who will collect checks representing cash purchases amounting to ten dollars we will give twenty-five cents in cash. Begin to save money now. Cut out the facsimile check herewith shown ; it will count as one dollar. Get nine more in checks and return them to us ; your money is ready for you. Our cash register issues a similar check for each purchase you make. Save them and you will be surprised how quickly you will secure the desired amount. Checks must represent cash purchases."

Liberal views even if founded upon erroneous impressions are preferable to the contracted ignorance of too conservative caution.

CONDENSED OR "WANT" ADVERTISEMENTS.

BUSINESS CHANCES

$2,500 will buy the stock of stoves and tinware, tools, patterns and raw stock of a live business in the thriving town of Burlington. Apply, Lock Box 113, Burlington. [30]

FOR SALE—In Ontario, large retail hardware business, doing immense trade; grand opportunity; good reasons for selling. Hardware Merchant, care of HARDWARE AND METAL, Toronto.

$5,000 will buy a good clean stock of general hardware, also tools, patterns and raw stock with good will of business; owner going west; an excellent chance for young tinsmith with some capital. Box 545, HARDWARE AND METAL, Toronto. (30)

J.M.T.

Steam Goods

They Stand the Test
Built for Durability

Our Engineers' Supplies are constructed to give that lasting satisfaction so desirable in requirements of this kind. The Engineer is pleased, who uses them. The Proprietor is satisfied who pays for them—because complaints are reduced to a minimum.

WE HANDLE

- Iron and Brass Pipe and Fittings
- Iron Body Valves
- Iron Cocks
- Safety Valves
- Relief Valves
- Marine Cocks
- Steam and Oil Separators
- Pressure Regulators
- Steam Vacuum and Recording Gauges
- Steam Engine Indicators
- Indicator Cocks
- Steam Whistles
- Lubricators
- Oil Cups
- Water Gauge Mountings
- Cauge Cocks
- Water Gauge Classes
- Cylinder Cocks
- Steam Traps
- Water Columns
- Thermometers, &c.

The J.M.T. Valve
Made in standard and extra heavy pattern for all pressures—renewable disc.

The J.M.T. Injector
Combines all the best features in injector construction — efficiency guaranteed.

PLUMBING AND STEAMFITTING

MANUFACTURE OF SOIL PIPE AND FITTINGS

Paper Prepared for the Recent Convention of the American Foundrymen's Association by T. J. Best, Montreal.

The first requisite in the art of making soil pipes and fittings is a well lighted and ventilated foundry. A shop 86x200 feet will be required for a melt of from 20 to 25 tons per day. Light should come from each side and end, also from one or two monitors running nearly the full length of the roof, with pivoted sash duly placed in them. This will make the centre of the shop nearly as light as at the sides. Perfect ventilation will also be assured. The mill, or cleaning, chipping, and oiling rooms, should be at one end of the foundry, separated by a fireproof wall. The mill room should be large enough for 12 to 16 ordinary mills. If, however, exhaust mills are used, a smaller number will answer.

The floor plan of the foundry could be laid out as follows : On the side nearest to the cupola a passage about 6 feet wide should be arranged for, extending from end to end. Then the pipe floors are laid out, each about 11x45 feet. The floors should run crosswise to the foundry, and then another passage of 5 feet laid out, also extending the full length of the building. There should be a good wide passage in front of the cupola, which should connect the longitudinal passages. In the centre of each passage a narrow gauge industrial railway should be laid down, and provided with proper turntables at each end and at the centre passage. This railway should continue through the mill room.

The mill room should be about 20x80 feet, the mills to be placed on each side. A turntable should be placed so that work may be taken from the mills when clean and sent to the chipping and grinding room, from which it should be continued to the oiling room, and thence to the shipping sheds.

The Method of Molding.

In the centre portions of the pipe floors, at proper distances apart from each other, there should be set and secured firmly iron rails or small I beams, on which to rest mold boxes and machines. In the centre of the passage between floors tee irons should be suspended from the roof, well stayed, and high enough to allow men to walk beneath them. This is for the purpose of resting the mold boxes against them while on end, after the heat has been poured and the boxes shaken out at night. A good supply of trucks is essential to carry out the castings either by night or day, as may be desired. In any case a few men with good trucks can clean up the foundry very quickly.

The machines or follow boards, on which the pipes are made, as well as sizes and weights of mold boxes, vary in different establishments. Some foundries use machines run by steam, others use hydraulic power or compressed air, to press the mold. The general way, however, is to do the work by hand ramming. The pattern should be made very accurately and be well fitted. I have seen patterns made with rather more than half circle and finished with files and emery cloth. This is a tedious and crude way. By all means see that good sound castings are provided, and turn them up. If you have a universal grinder, finish your patterns by grinding them. Too much care cannot be given the machines and patterns. The plates and stops for mold boxes must be accurate. The mechanism for raising and lowering patterns should be as simple as possible, with the precaution that the patterns should be raised vertically only. I have seen cam motions that would lift patterns slightly sidewise, while others would lift toward one end. This is liable to make an overlap one way or the other. Patterns for 2-inch and 3-inch pipe are made two in a box. In many places the 4-inch are also made two in a box, but with a single pattern and a light box one man can make 35 and in many cases 45 4-inch pipes a day, if two men are working together. Another advantage is that when one man rams the mold it will be uniform. Two men working on a mold will not ram up the same, and the result is an uneven casting. Good results are obtained with one man on a floor and the understanding that the men lift for each other, and also help set the cores.

The light pipes should be made in the centre of the shop, so that the hottest iron may be poured there. The heavier material can be cast at the ends of the foundry, and the metal taken there in small bull ladles holding 500 to 600 pounds, on an overhead system. This will save a lot of hard work. The fitting floors can all be stationed at one side of the foundry, or in any other part not taken up by pipe floors.

The Care of Patterns.

All fitting patterns should be well finished and set true in follow boards. The 4-inch tees, as well as all other small patterns, are made two in a box. This refers to shell patterns. I have seen a man make 80 4-inch elbows in a day, but both patterns and follow boards must be first-class to do this.

Follow boards and patterns must be kept clean. The boards should be well coated with shellac varnish, and patterns with a composition to prevent rust. For this purpose a good article consists of 4 ounces sperm wax and 4 of beeswax melted together. Benzine is added, as well as plumbago, to make a stiff paste. Put this on the patterns with a paint brush and polish with an ordinary stove brush. A boy can keep quite a number of patterns in good condition. Molders can and will make more and better work when they have the best of patterns to work with.

The pattern storage is another important thing. The mold boards should be given a letter or figure. A corresponding letter or figure should be placed on the rack or shelf on which the pattern is to be kept. The storage should be well ventilated and lighted. Fireproof doors and shutters are necessary. These may be expensive, but will pay in the end. All pipe patterns should be cleaned off every day and the mechanism oiled. It will not take long to do this, but neglect of it will soon run up into money.

There should be a plentiful water supply. Six or eight water barrels set on the floor will be of great benefit to the men. It will enable them to drink and to wet the core boxes and bars as required without walking a long distance.

Sometimes there has been difficulty in pouring the full heat. A good plan is to train every man to carry iron. Every laborer should be given a ladle full of the first tap and be made to carry it to some part of the shop and dump it into a conical pot. Of these there should be quite a number throughout the foundry. Putting the iron into them is far better than spilling it on the floor to be gathered up next morning. Nice, clean ingot scrap is the result, and no sand or dirt to go into the cupola. If every new man is trained as above mentioned there will never be trouble about having men on hand to take away the full heat.

Better Pipe and Fittings Demanded.

We have to turn out a better grade of pipe and fittings than formerly. I do not know how it is with you in the United States, but we in Canada are forbidden to use the broad mantle of charity that covers a multitude of sins —that is to say, the hot tar pot. Our pipes and fittings must be oiled, or dipped into a mixture of oil and benzine. The oiling room should have two or more tanks in which all pipes and fittings can be immersed ; also suitable drainage racks on which pipes can be stood on end, the surplus oil running back into the tanks. The fittings are dipped and thrown on a drainage rack. Racks about 2 feet apart and as long as convenient may be set up, bars of $\frac{3}{4}$-inch pipe being placed about every 2 feet to form pockets or divisions. This will prevent the oiled pipe from falling over, and by the time the rack is filled the first pipes will be ready to go to the shipping room. Some foundries dip their pipes on the side, while others dip on end. This may be carried out just as is desired or convenient.

Pipe Cores.

There are various ways of making cores. They are now, however, usually made of green sand. Some foundries do their ramming by hand, others by means of squeezers, and still others in vertical core boxes made in three parts. In the boxes the back part is held stationary

and the other two parts are hinged to it. The core bar is whetted and put into position. Then a tube, having a screw with a coarse thread at the lower end, is lowered over the core bar, a small quantity of sand thrown in and the screw revolved by machinery. A man throws the sand into the hopper and as the screw revolves it packs the core, which raises itself at the same time. There are balance weights on a chain which regulate the pressure put on the sand in the box. This machine is very good, but also very expensive, and is being superseded by the horizontal machine. There is a great variety of these machines. For instance, I have seen a long riddle suspended so as to sift the sand down on a core bar. The noise of the mechanism could be heard a long way off and was very annoying. Others are made with a shaft on which a number of wheels are made to revolve and thus shake the sand on the bars. Whatever the style, the bar revolves and the sand falls on it from above. As the sand impinges it is rotated against the steel knife provided and shaped for the purpose. From 500 to 600 cores can be made and used each day on a good machine, in sizes from 2 to 6 inches in diameter. The change from one size to another can be made in a minute.

Cupola and Melting.

We read so much about high and low melting ratios. The trouble is that we do not take time to think deeply enough about our business. For instance, not long ago I read of a foundry having a 52-inch cupola melting about 20,000 pounds a day at a ratio of 6 to 1. They could not understand why others were getting better results. I do not pretend to know as much about what I have given here as I ought to, yet I do say that if we want to be successful we must proportion things properly. Therefore for a plant such as I have described in this paper, in which from 20 to 25 tons a day are cast, the cupola should measure about 45 inches inside the lining, which should be double brick. At least six tuyeres 4 by 12 inches should be arranged for. The main blast pipe should be 18 inches diameter, and if convenient let down each side of the cupola in two 13-inch pipes. The blower, which I prefer to have a positive one, should be as near the cupola as convenient. In this way from 3,500 to 4,000 cubic feet of air will be furnished each ton of iron melted and there will be no difficulty in getting a 10 to 1 ratio. It must be borne in mind, however, that it is as important to look after the coke as any other part of the melting scheme, and suitable dry sheds should be provided for it as well as the sand.

For pipe and fittings the metal required should be both hot and clean. In order to have this let the melt be as continuous as possible. A convenient ladle should be kept under the spout, and after the metal is tapped it should not be stopped again during the whole pouring operation. The tuyeres for this class of castings should be placed lower than where iron is held in the cupola. In order to get rid of the slag the spout should be made special, as follows : About one-half down the length of the spout an opening should be made in one side, and about 4 inches ahead of this opening there should be inserted a fire brick on edge, so as to form a trap or depression, under which the iron must pass, or rise to about the same level again on the other side of the brick. Then the slag, which is lighter than the iron, will flow off at the side of the opening, and can be led to any desired place. It will be advisable to cover that portion of the spout nearest the cupola. Keep a little wood or charcoal floating on the slag. This will keep it hot and insure its flowing easily, at the same time keeping your iron clean.

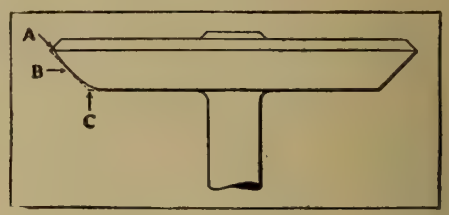
VARNISH FOR RADIATORS.

Radiators for steam and hot water heating apparatus require to be lacquered with varnishes of special quality, owing to the high temperature to which they are exposed (nearly the boiling point of water). Oil paints are unsuitable, being too liable to blister, whilst light colors turn brown and peel off. The best lacquer is a good asphalt varnish, which, when stoved, will keep its gloss and last for a long time ; but black is not a favorite color for this purpose. The same material can, however, be used in the preparation of red-brown, dark brown, and grey shades by adding Venetian red and lithopone respectively to the asphalt varnish.

To obtain a durable coating of oil paint topped with varnish, the former must be well thinned with turps, so that it dries matt, another coating being then given and varnished with special varnish. Some commercial varnishes sold for this purpose soften under the influence of the heat, and in a very short time become brittle and rub off under the finger. The varnishes should be made of copal, inferior grades being prepared from hardened resin or colophony, and should be thin in order that they may harden quickly and not turn brown. Thicker varnish can only be used when a drying stove is employed, the coating then being very durable and of good appearance.

The following recipes are recommended : Black radiator varnish : (1) Prime Syrian asphaltum or Gilsonite, 10 parts, are heated over a moderate fire with 2 parts of linseed varnish until uniformly fluid, and the mixture is thinned down to the consistency of varnish with turps when cold. (2) Asphaltum, 6 parts ; lignite asphaltum, 4 parts ; and linseed varnish, 2 parts, are melted together, and thinned down when cold with turps and solvent naptha or heavy benzine.

Clear radiator varnish : (1) Ten parts of Manila or kauri copal are melted in the usual manner and heated to 270 degrees C., with three parts of prepared drying oil, tested for clearness, and thinned with the requisite quantity of turps when cold. (2) Ten parts of hard resin (5 to 10 per cent. calcium resinate), 2 parts of galipot, 3 parts of linseed varnish, and 0.2 of ground litharge are melted together at a moderate heat until fluid, then cooled and thinned down with turps or other suitable diluent until workable. These varnishes may be colored with body colors of best quality, ground with a portion of the varnish, and then mixed with the bulk.—Farben Zeitung.



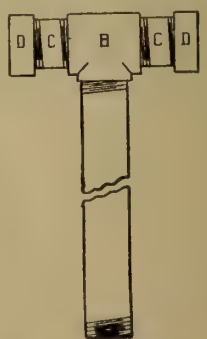
PLUMBERS' CONVENTION DATES.

John A. Gordon, Montreal, secretary of the National Plumbers' and Steamfitters' Association, has received word from Ottawa that the dates set for the annual convention in that city are August 7, 8 and 9. Every effort is being made to have the convention of special benefit to every plumber in the Dominion, and it is to be hoped, in the interests of the trade, that it will be well attended.

LAST RESORT REMEDY FOR A LEAKY VALVE.

When every other remedy for a leaky inlet or exhaust valve has failed, says Popular Mechanics, try this :

Chuck the stem of the valve in a high-speed lathe, and with as fine a flat file as can be obtained, while the valve is revolving in the lathe at a high rate of speed, touch lightly at (A) (see sketch), skip (B) and take off the corner (C), leaving the valve with a slightly rounded instead of a flat seating surface. It has been found that this method is sure when others fail, and that a valve so dressed will hold well for months afterward. It does not matter which way the stem wabbles, for the valve always finds a perfect seat, on account of its spherical shape, the action being similar to that of a ball check valve.



Repairing a Leaky Valve.

HAMMER MADE OF PIPE.

A very handy hammer can be made for little or nothing, provided one has a few old materials on hand.

Into a ½-in. tee (B) screw a piece of ½-in. pipe (A) about 8 in. long with threads on one end and two pieces of ½-inch pipe (CC) 2½-in. long with threads on both ends. On the ends (DD) put ½-in. caps.

A larger hammer can be made by using pipe of larger dimensions, and the hammer can be made heavier by stopping up the tee and filling the head with lead.

Hammer Made of Pipe.

Tenders will be received by J. W. Morgan, Port Arthur, up to Wednesday, July 25, for the installation of the plumbing and heating system in the new Ward school in Port Arthur.

MORRISON CO'S EXCURSION.

Nearly 200 employees of the James Morrison Brass Mfg. Co., with their families and friends, spent an enjoyable time last Saturday at Niagara Falls, the occasion being their 18th annual excursion and games. The trip from Toronto was made via the Niagara Navigation Co's boats and the games were carried off successfully at the Queen Victoria Park below the Canadian Falls.

WATER SUPPLY SYSTEM.

The Provincial Board of Health has approved the plans for the proposed water supply systems of Brantford and Chesley, to cost $28,000 and $30,000, respectively.

The application regarding the water supply system of Port Elgin was referred back for additional information, and the same action was taken in regard to the waterworks and sewerage systems for Picton.

The municipality of Bracebridge has been requested to submit plans showing the proposed sewerage systems, for which a permit has been asked. The plans submitted to the board were those dating back to 1900, when a sewerage system on a larger scale was proposed.

For the protection of Peterboro water supply the municipality will control the area which parallels the Otonabee River to Lake Katchawananooke, a distance of about nine miles from the city.

SOLDER AND CEMENTS.

A hard and quick-setting cement for fixing brass letters to glass is made up of litharge, 2 parts; white lead, 1 part; boiled linseed oil, 3 parts; gum copal, 1 part. It should be mixed just before it is needed for use.

A recipe for a soldering fluid for iron is to place in a bottle hydrochloric acid and add to it as much zinc as the acid will dissolve and a small quantity of sal ammoniac. The sal ammoniac has a cleansing action on the metal.

A recipe for a cement for irons is: Sulphur flowers, 6 parts; white lead, dry, 6 parts; powdered borax, 1 part. Mix well by sifting and keep as a dry powder in a well-closed tin box. To prepare this for use, make a thin paste with strong sulphuric acid. It will become hard in five days.

PROSECUTIONS COMMENCE.

As an aftermath of the recent civic investigation in Toronto, summonses have been served on practically all of those who, according to Judge Winchester's report, were implicated in the scandals arising out of the recent investigation. Joseph Wright, of the Bennett & Wright Company, received four of the writs, while another was issued for S. S. Clark, of the same company. Writs were also issued for the representatives of the various roofing concerns and for the architects and others concerned in the scandals.

Hagen Bros. & Company, plumbers, have purchased the heating and plumbing business formerly carried on by J. C. Carter, Amherst, N.S.

PLUMBING MARKETS

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, July 20, 1906.

Considering the time of year, the call for all classes of seasonable plumbing supplies is most remarkable. It was scarcely hoped that this Summer's sales would equal those of the corresponding period last year, as that was considered a wonderful departure from the customary midsummer quietness. So far, however, this season has surpassed it in the volume of business done, and, with a good Fall trade, the present year is sure to go down as a record-breaking one.

As pig lead has firmed up again since our last report, it is altogether likely that lead pipe will hold steady at the recently advanced prices. In explanation of this rise in value while pig lead was distinctly declining, it might be stated that for some time while pig lead was at high-water mark, no change was made in the price of pipe, so that it was really selling at a much lower figure than conditions in the primary markets warranted.

All prices are held very firm, but there has been no further increase in the price of any line of supplies.

RANGE BOILERS—Sales continue to be of satisfactory volume. Our prices this week are as follows: Iron clad, 30 gal., $5; 40 gal., $6.50 net list; copper, 40 gallon, $22.50; 35 gallon, $27; 40 gallon, $30.75 net.

LEAD PIPE—The recent advance in these goods has been strengthened by a firmer market in pig lead, and it is generally thought that there will not be any return to the lower price for some time yet, at any rate. We quote: 15 per cent., f.o.b., Montreal, Toronto, St. John, N. B., Halifax; f.o.b., London, 15c. per hundred lbs. extra; f.o.b. Hamilton, 10c. per hundred lbs. extra.

IRON PIPE FITTINGS—All kinds of fittings are being sold freely. Prices are firm at the same discounts as before. Discounts on all sizes of nipples up to 6 inch., 67½ to 70 per cent.

IRON PIPE—Conditions are unchanged, and the long expected advance has not yet materialized. We are quoting this week's prices as follows: Standard pipe in lots of 100 ft., regular lengths, 1-4 inch, $5.50; 3-8 inch, $5.50; 1-2 inch, $8.50; 3-4 inch, $11.50; 1 inch, $16.50; 1 1-4 inches, $22.50; 1 1-2 inches, $27; 2 inches, $36.50; discounts on black pipe, 1-4 inch, 62 per cent.; 3-8 inch, 62 per cent.; 1-2 inch, 71 1-2 per cent.; 3-4 inch and upwards, 73 1-2 per cent. Discounts on galvanized pipe: 1-4 inch, 47 per cent.; 3-8 inch, 47 per cent.; 1-2 inch, 61 1-2 per cent.; 3-4 inch and upwards, 63 1-2 per cent. Extra heavy pipe of 100 feet lots are quoted as follows: 1-2 inch, $12; 3-4 inch, $15; 1 inch, $22; 1 1-4 inches, $30; 1 1-2 inches, $36; 2 inches, $50. The discount for black pipe is 71 per cent., and for galvanized, 61 per cent.

SOIL PIPE AND FITTINGS—Good business is being done at steady prices. We are quoting as follows: Standard soil pipe, 50 per cent. off list. Standard fittings, 50 and 10 per cent. off list; medium and extra heavy soil pipe, 60 per cent. off. Fittings, 60 per cent. off.

SOLDER—A recovery in the pig lead market and a slight firming up of tin, have produced steadier conditions in solder, and stopped the decline. We are again quoting: Bar solder, half-and-half, guaranteed, 23½c.; No. 2 wiping solder, 19c.

ENAMELWARE—There is a good inquiry for enamelware to equip the many new buildings which are nearing completion. Our prices for this week follow: Canadian bath tubs, plate E1, 5 feet, 1st quality, $20.65, special $18.65; plate E11 and E21, 5 feet, 1st quality, $19.50, special $17.15; plate E35, 5 feet, 1st quality, $24.65, special $22.40. American baths, rolled rim, 5 feet 2 1-2 inch rim, $22.25; 3 inch rim, $29.25. Lavatories, discounts, 1st quality, 30 to 30 and 5 per cent.; special, 30 and 10 to 40 per cent. Sinks, 18 x 30 inch, flat rim, 1st quality, $2.60, special $2.45.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, July 20, 1906.

Trade continues to keep brisk for this season and all the supply houses have the same story to tell—a rushing Summer's trade in plumbing supplies and a fair trade in heating goods. All report, too, a larger total for the first six months than for the same period a year ago and this in spite of the dullness in the late Spring.

All prices keep firm with no changes to report. Solder is about as before, with lead pipe, iron pipe and fittings all firm and steady.

LEAD PIPE—Prices are firm and the demand lively. We quote as follows: Lead pipe, 8c., discount 15 per cent.

SOIL PIPE AND FITTINGS — Our quotations are as follows: Medium and extra heavy pipe and fittings, 60 per cent.; 7 and 8 inch pipe, 40 and 5 per cent.

IRON PIPE—A large demand is evi-

dent and quotations are firm. We quote: Black, 1 in. pipe, $4.37 ; galvanized, 1 in. pipe, $6.02. See current market quotations for other sizes.

IRON PIPE FITTINGS — We quote as follows: Cast iron elbows, tees, crosses, etc., 67½ per cent. ; cast iron plugs and bushings, 67½ per cent. ; flange unions, 65 per cent. ; nipples, 75 and 5 per cent. ; iron cocks, 60 per cent. ; Canadian malleable, 35 per cent. ; American malleable, 25 per cent. ; malleable unions, 65 per cent. ; malleable bushings and plugs, 60 and 10 per cent. ; C. I. ceiling plates, plain or N. P., 70 per cent. ; C. I. floor, 80 per cent. ; hook-plates, 65 per cent. ; expansion plates, 65 per cent. ; headers or branch tees, 65½ per cent. ; ring hangers, black or galvanized, 70 per cent., American list.

GALVANIZED IRON RANGE BOILERS—We quote : 12 gallon capacity, standard, $4.50 ; extra heavy, $6.50 ; 18 gallon, standard, $4.75 ; extra heavy, $6.75 ; 24 gallon, standard, $4.75 ; extra heavy, $6.75 ; 30 gallon, standard, $4.75 ; extra heavy, $7.50 ; 35 gallon, standard, $5.75 ; extra heavy, $8.50 ; 40 gallon, standard, $6.75 ; 40 gallon, extra heavy, $9.50 ; 52 gallon, $11 ; extra heavy, $14 ; 66 gallon, standard, $18 ; extra heavy, $20 ; 82 gallon, standard, $21 ; extra heavy, $24 ; 100 gallon, standard, $29 ; extra heavy, $34; 120 gallon, standard, $34 ; extra heavy, $40 ; 144 gallon, standard, $47 ; extra heavy, $55. The discount on copper and range boilers continues at 15 per cent.

RADIATORS—Trade continues very good with a larger demand likely as buildings in course of erection near completion. We quote: Hot water, 50 and 2 1-2 per cent.; steam, 50 and 5 per cent.; wall radiators, 50 per cent.

SOLDER — Prices are unchanged. We quote : Bar solder, half-and-half, guaranteed, 24c. to 25c. ; wiping, 22c.

ENAMELWARE — We quote as follows : Plate E1, 5 feet, first quality, $20.65, special $18.65 ; plate E11, 5 feet, first quality, $19.15, special $17.15 ; plate E21, 5 feet, first quality, $19.15, special $17.15 ; plate E35, 5 feet, first quality, $24.65, special $22.40. Fittings extra.

PLUMBING ITEMS.

A gas well with a yield of about 2,000,000 cubic feet per day has been struck at Kingsville, Ont. A company has been formed to build a pipe line from the natural gas field at Tilbury to Chatham.

About 20 men are employed in the work of installing a filteration system at the waterworks at Fredericton, N.B.

Niagara Falls, Ont., has obtained sanction for the extension of the town's waterworks and the electric lighting system.

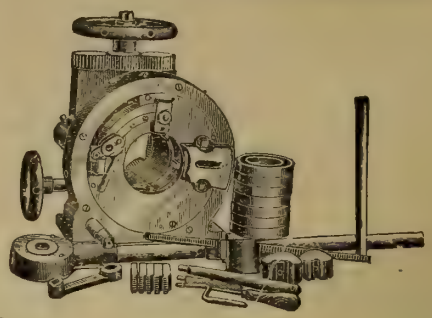
The Town of Port Elgin is asking for tenders for the supplies necessary for the construction of a system of waterworks in that town.

Saskatoon, Sask., is advertising for tenders for the supply of material for the construction of waterworks, sewerage, and electric lighting equipment, tenders closing on August 14.

The American Waterworks Association, which held its convention in Boston last week, has decided to hold its next annual convention in Toronto. About 400 delegates are expected to attend.

TINWARE ON FIRST G.T.P. CAR.

The Vancouver World of July 3 contains the following paragraph :



"The first Grand Trunk Pacific freight car to reach the Pacific Coast arrived in Vancouver this morning over the Great Northern line, direct from Montreal. The new car, which is numbered 300208, left the Montreal shops of the G.T.P. immediately before being loaded with tinware for Vancouver merchants. The car has 60,000 pounds' capacity, and is the forerunner of many others now on their way to this coast."

This car made a remarkably fast trip across the continent. On being discharged from the shops of the Canada Car Co., Montreal, it received a large shipment of enamelled, galvanized and tinware, from the factory of the Thos. Davidson Mfg. Co. This was on June 19, and the Davidson Co. are feeling very jubilant over the prompt deliverv of this carload.

WEST INDIAN TRADE.

G. E. Burke, Canadian commercial agent at Kingston, Jamaica, reports that there is a decided demand in evidence there for enamelware for domestic uses. Canadian manufacturers of tin and enamelware have developed a trade with Bermuda and will devote some attention to increasing the exports to other parts of the West Indies.

A Certain Sense of Satisfaction

goes with every MERRELL PORTABLE HAND MACHINE, PIPE THREADING and CUTTING MACHINE. We build them that way.

For doing ALL kinds of threading—under ALL conditions—labor trouble and faulty material included—where speed, durability and ease of control count for something, our word to you is to investigate the MERRELL.

Whether it be stationary or portable—hand or power driven—30 DAYS FREE TRIAL must prove conclusively that your choice should be the MERRELL.

This Portable Hand Machine has encased gears, MERRELL standard quick opening and closing die-head, and the latest improved Cutting-off Knife.

Let us tell you more about this machine—The Chasers, Vise and the large range of work covered.

Oxford Boiler Fire-pot Walls do a Lot of Boiler-selling——

Those walls (see the picture) aren't sloped in over the fire just to be different from every other hot-water boiler. They slope in because that way they save fuel by catching heat other boilers waste with their straight-up-and-down walls. You'd hardly believe what a really big argument this Oxford peculiarity is when it comes to clinching a sale. It's so easy to see into—it's so clearly a fuel-saver, this idea. And that's only one of the twelve selling points of the

Oxford Hot-water Boiler

If you had all twelve at your tongue's end, you'd close more jobs this Summer and Fall. Why wouldn't it be a good idea to write to-day and ask for our special offer to live dealers?

UNITED BRASS GOODS PAY FOR THEMSELVES.

Every shrewd plumber knows that doing a job with cheap materials is an expensive way of making money. The repairs the plumber is called upon to make after the job has been in use, cost time at least. Often several trips are necessary and eventually the plumber is obliged to put in good material that he might have used in the first place at less expense.

But the most expensive thing about poor plumbing is its effect on your business. Every job you do is an advertisement for you. Faulty work advertises your shortsightedness. Shrewd plumbers count on getting two or three jobs as the result of each one done. But

SHREWD PLUMBERS USE UNITED BRASS GOODS.

UNITED Brass Goods cost a little more, but the job that is done with UNITED goods is finished. The plumber is saved the time and trouble of making repairs, he is saved the worry that must come when work goes back on him, he is saved every annoyance and expense because

UNITED BRASS GOODS ALWAYS GIVE PERFECT SERVICE.

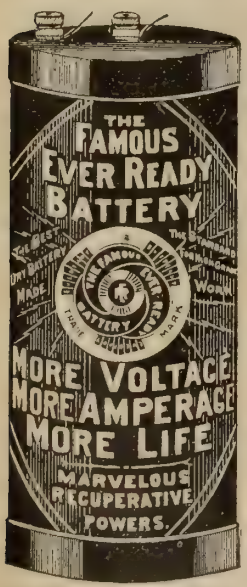
THE ORIGINAL

The Improved Daisy Hot-Water Boiler is the Adam of the industry. The others came in on the eve of the Daisy's success.



Imitations, etc., are never as good as originals, because they represent "follow-the-lead" methods, have no self-reliance.

Other boiler-makers have attempted to get the "Daisy" ECONOMY trait, but so far they haven't been able to get within a mile of it, though they have done lots of trying and shown lots of things—ON PAPER.

Let Dealers be Wise and Order the "Daisy"

CURRENT MARKET QUOTATIONS.

July 21, 1906.

There prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate.

It Won't Cost You Anything

to know that Paterson's Wire Edged Ready Roofing is made from Pure Wool Felt saturated with Refined Coal Tar, and the different plies cemented together with the highest grade of Bitumen. Our Roofing contains nothing that will evaporate at less than 300° Fahrenheit, and that's why it lasts so long.

American Twin Freezer

Freezes two flavors of Ice Cream or an Ice or Sherbet and Ice Cream at one and same time, in one freezer.

SOMETHING ENTIRELY NEW —NEVER DONE BEFORE.

THE can is divided in two parts by a vertical partition. One flavor is placed in one, the other in opposite side of can, in each of which the scrapers, etc., operate. The can cannot be turned as in old style freezers, because of the partition. It is therefore swung to and fro by a rocking motion of the crank. This is a more comfortable and much easier movement. It is very much less tiresome than turning a crank. One can sit back in a chair with freezer alongside and rock the crank to and fro without discomfort or undue exertion and even read at same time. Although two flavors are frozen at once and with less exertion, no more time is required than in old style freezers.

The **Pails have electric welded wire hoops,** which are guaranteed not to break or fall off; Cans are of heavy tinplate with **drawn steel bottoms** that are guaranteed not to fall out or break and do not leak, the strongest and most durable Freezer Can made; the **Automatic Twin Scrapers** by their positive action insure perfect scraping of frozen particles from side of can. All inside parts are heavily coated with pure block tin, and outside parts all thoroughly galvanized.

HURD'S BENCH AXE—CANADA PATTERN
Extra Full Weight, Crucible Cast Steel Bit, Polished and Bronzed. This Axe has a High Ridge and Throws the Chip Much Better than the American Pattern.

SUCCESSFUL RETAILING

is the art of buying goods and selling them at a good profit and at the same time pleasing your customer. If you haven't been able to do it so far, listen.

The season for Chopping Axes will soon be with us. Have you made up your mind whether you will buy **HURD'S** or an inferior line?

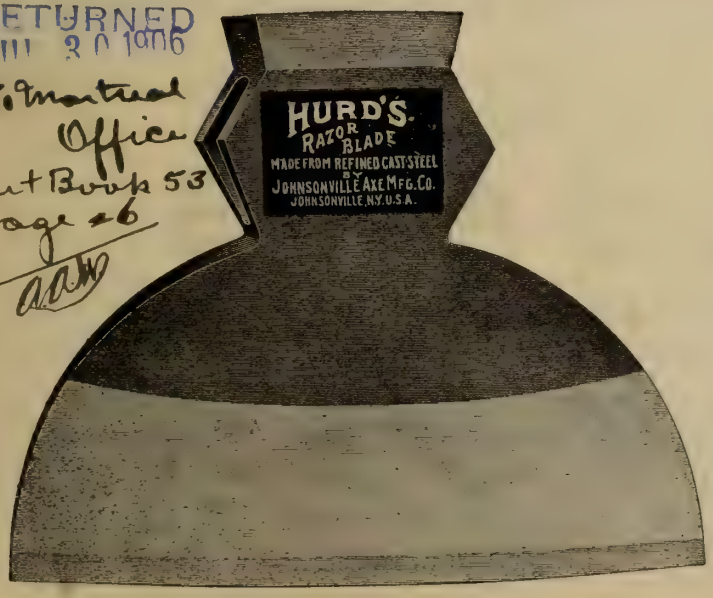
If you want the **BEST,** at the same price as cheap goods, specify **HURD'S.**

We have received many letters from customers throughout the country, and from the contents, we can easily see that the name "Hurd" is associated in their minds, with superiority in Axe and Tool manufacture.

At the present time there is no good reason why a dealer should encourage the sale of any poor article, for if the buying public in Canada ever had money to spend, they have it now and our experience has been that it is easier to sell a good article at a fair price, than a poor one at a low price.

Every progressive dealer who fails to make Hurd's Axes and Tools a feature of his business this year, is missing an opportunity to establish his reputation for quality.

We can supply you with **HURD'S CHOPPING AXES** in all patterns and weights, **HURD'S BENCH AXES** all numbers and **HURD'S BROAD AXES** all weights.



Write for prices and join the **SUCCESSFUL RETAILERS.**

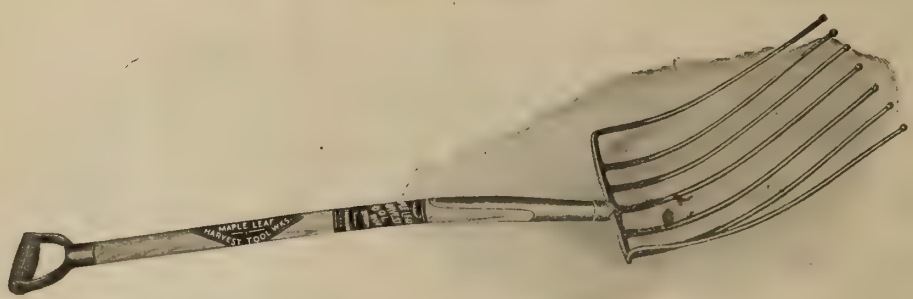
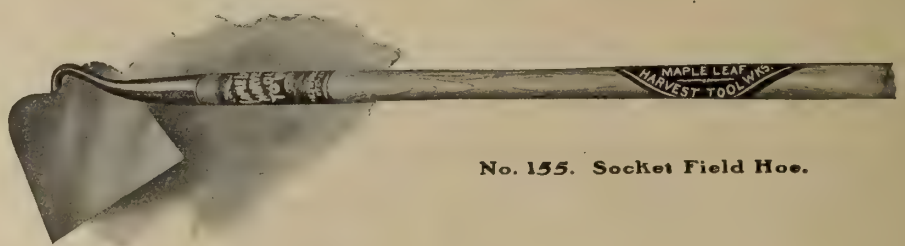
HAVE YOU GOT THEM?

The Up-to-date Harvest Tools!



Merchants who appreciate values and aim to give their patrons the best, will stock the **Maple Leaf Harvest Tools,** which are unequalled in Quality, Beauty and Finish.



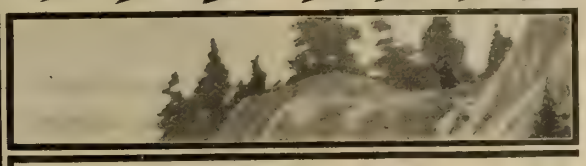
No. 122. Manure Fork

No. 108. Hay Fork

No. 243. Beet Fork

No. 155. Socket Field Hoe.

To THE MERCHANTS:

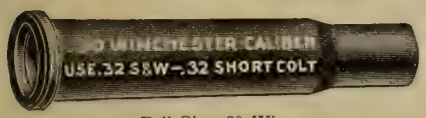


The season is now on when your stock of harvest tools will require "sorting" up. Make your orders call for **"Maple Leaf"** Harvest Tools, and if your jobber cannot supply them, send your order to us and it will receive our prompt and careful attention. A trial order will convince you of the superiority of the "Maple Leaf" Harvest Tools.

The Maple Leaf Harvest Tool Co., Limited

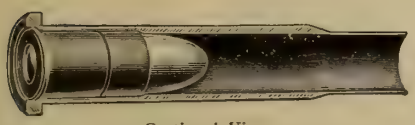
TILLSONBURG, ONT.

WINCHESTER



Model 1886 **Winchester** repeating rifle is one of the strongest made and one that will successfully withstand the shock and strain of shooting such tremendous charges of powder and lead as are contained in .45-70-405 and other big cartridges. This model is very popular with big game hunters all over the world on account of its strength, accuracy and great killing qualities. This gun has been tested on all kinds of game, and has invariably given such splendid satisfaction that it is doubtful if it will ever be equalled for the heavy cartridges it was designed to handle.

We keep it in stock in a great variety of calibres from .33 to .45-70-405.



It is only **one** of **40** different **Winchester** rifles in our stock made to suit every taste and adapted to every use.

Is it not best to buy where you find the variety to select from ?

WINCHESTER SUPPLEMENTAL CHAMBERS

Full Size .30 Win.

Sectional View.

Made from solid steel, nickel-plated. Exact size of high powered cartridges, but chambered for smaller pistol and revolver sizes. Will retail at 75c. or less.

The **Winchester** Supplemental Chambers are new and are designed to adapt pistol and revolver cartridges for use in rifles of high power. The only change necessary is the adjustment of the sights. The rifle can then be used for short range shooting or indoor target practice. It is thus an aid to attaining proficiency in the use of a regular hunting rifle at a minimum expenditure for ammunition. Made in eight rifle sizes.

The **Winchester** Supplemental Chambers are selling. Their price is low. Will you not add them to your stock ?

Our "**Sporting and Fall Goods**" catalogue contains 88 pages of goods you will sell in the Fall and Winter. A copy for the asking.

FROTHINGHAM & WORKMAN, LIMITED

WHOLESALE
HARDWARE AND IRON MERCHANTS,

1809 1906

MONTREAL, CANADA.

The Dealer's Reputation depends on the quality of the Goods he sells.

H&R REVOLVERS

Are known around the world for their safety, accuracy, durability, perfect design and general superiority.

Only the most skilled mechanics and only the finest quality of material employed in their manufacture. Every piece is finished to the 1000th part of an inch and fits perfectly. ***No Rattle*** in "H & R" such as a quick shake reveals in other makes.

Every revolver that leaves the factory has passed the most rigid inspection and is guaranteed perfect. Barrel and cylinder drilled from solid piece of finest forged steel; solid steel frame; handsome rubber stock affording good grip.

Noted for smooth action, perfect accuracy and power. Don't experiment with an unreliable make because low price is offered as a tempting bait.

The retail price ranges from $2.50 to $8.00 and each model is the greatest value ever offered for the price. They are the kind that do not come back, but give permanent satisfaction.

Put in a full line and you will be pleased with the results. Your jobber can supply you.

BRADSTREET'S

Capital and Surplus, $1,500,000. **Offices Throughout the Civilized World**

Executive Offices: Nos. 346 and 348 Broadway, New York City, U.S.A.

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information no effort is spared, and no reasonable expense considered too great, that the results may justify its claims as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. **Correspondence invited.**

ONTARIO LANTERN & LAMP CO., LIMITED

HAMILTON, ONT.

Why is the *Marlin* Repeating Shotgun, Model No. 17, the best low-priced repeating shotgun in the world?

By making this gun with a solid frame and a straight grip stock a number of parts have been eliminated. The result is a stronger, simpler, cleaner gun than any other repeating model and a very much less costly one.

The exclusively *Marlin* solid top and side ejection are features of Model 17 and to these famous *Marlin* ideas are added the new double extractor and a two-piece safety recoil block—devices which repeating shotgun users will welcome.

The *Marlin* breech block and working parts are *cut* from solid drop forgings. The barrel of special rolled steel is bored for both smokeless powder and black. The guaranteed *Marlin* pattern of 325 pellets with 1¼ oz. No. 8 shot in a 30 in. circle at 40 yards is maintained in Model 17.

When the ducks come rushing in among the decoys or the grouse roar off through the dead leaves you cannot be armed with a better, quicker, harder-hitting gun than the *Marlin* Model 17.

It is a first-class quail gun. For woodcock, snipe, prairie chickens, sharp tail grouse or any other bird shooting it is unsurpassed.

Its records at the traps are wonderful.

TO ALL DEALERS HANDLING FIREARMS:

The above is one of seven advertisements to be used by the Marlin Company in their 1906 advertising campaign. These advertisements will be inserted in a list of magazines selected for their QUALITY, known to be bought and read by a class of people financially able to buy Marlin repeaters and having a total guaranteed circulation per month of 5,000,000. Estimating five readers to a magazine, this will give a total, for seven months, of 25,000,000.

In addition, Marlin goods are advertised in farm papers, hardware papers, sporting goods papers and in many miscellaneous publications.

In our advertisements we ask for six cents in postage stamps. This means that a person must furnish paper and envelope, a two-cent stamp for mailing, include six cents and take the time and trouble necessary to write us a letter. Our object is to cut out catalog collectors, young boys and girls and people who are not interested enough to invest ten cents and the time and trouble necessary.

We reason that if a person is interested enough to do this, it is worth our while to go after him seriously and earnestly, and on all inquirers answering these advertisements and spending ten cents on us, we spend more than twenty cents.

We send each and every one a 136-page catalog illustrated with hundreds of engravings, having a beautiful cover in colors and containing a large amount of general information interesting and instructive to all shooters whether they use Marlin repeaters or not.

We send also a copy of our 96-page illustrated testimonial book and a personal letter in which we refer them to the nearest dealer that we know of who carries a good stock of Marlin goods and is enterprising enough to follow up an inquirer and try to sell the man a Marlin repeater.

We also send to the dealer the name and address of the party inquiring, thereby putting the dealer and the consumer in direct communication one with the other. We also follow up the customer and urge him to buy through the dealer.

Our advertising campaign each year brings us thousands of inquiries and makes us a great deal of expense and trouble, as you can readily see, but we believe that it pays us and it will pay you if you will take part in it.

If you are interested please write us and give us full particulars as to exactly where you stand on Marlin goods. If you are with us we want to know it and send you some of this business. Write us to-day and tell us whether you want to be on our dealers' list or not.

There are many other valuable Marlin ideas included in every Marlin gun. Send six cents in stamps for our handsome catalog, which explains all and contains much other valuable information.

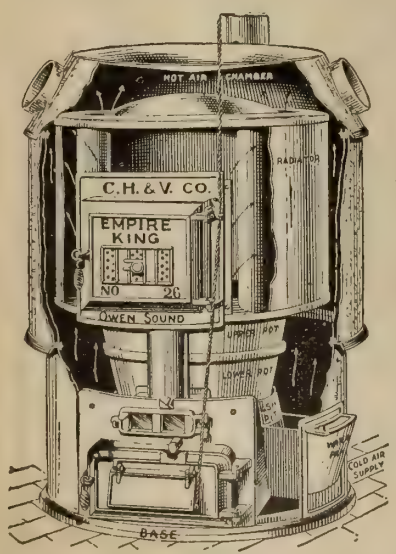
STEEL

TANKS

Steel tanks, made of 14-gauge sheet steel, top edges finished with angle steel, any size to order.

The Steel Trough and Tank Co., Limited, - Tweed, Ontario

Do you want



— to sell your business ?
— to buy a business ?
—to employ a new clerk ?
—to secure a position ?
—to sell some store fixtures ?
—to buy some tinners' tools ?

the easiest way to satisfy your wants is to place a " want ad." in Hardware and Metal.

The cost is small, only 2c. per word for first insertion and one cent per word for subsequent insertions.

Some man in some part of Canada will be interested in your proposition.

Hardware and Metal is the only medium that reaches the trade thoroughly from the Atlantic to the Pacific.

Cast-Iron Fire Guards
fitting around the interior of the radiator, at the bottom (just above the fire pot) preventing the burning out of steel, is a feature to be found only on the

"Empire King" Furnace

The radiator is made of heavy steel plate encircling the dome, leaving a wide space between the two for circulation of air, giving a large heating surface.

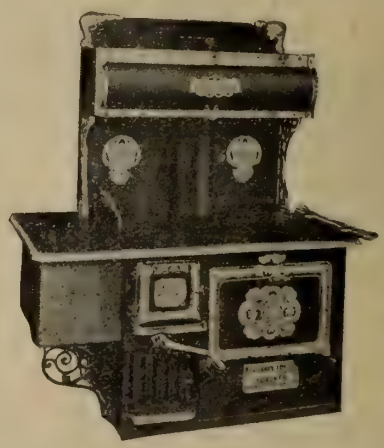
You are the kind of dealer we want to connect with.



You won't sell your trade a steel-plate range that hasn't a thing to recommend it but its price.

You care enough about your own reputation to make certain that the range-maker thinks a lot of his.

You want a range that has every merit that can be crowded into an honest range at a fair price,—a range that you KNOW will bake perfectly and do all its work just as well as only a good range can.

And you want that range to be advertised for you, and so advertised that people will come in and look it over while you talk about it.

That's why you want your floor to show the steel-plate range that's called the

Oxford Chancellor

That's why, too, we'd be glad to have you ask us what proposition we make to dealers of your kind.

QUICK SERVICE

You can send a "want ad" to Hardware and Metal on Thursday, and on Friday afternoon it will start on its journey north, south, east and west. It will travel with 20th century rapidity and within five days it will have interviewed every hardware merchant of any account in the Dominion.

Hardware merchants read Hardware and Metal when they are too busy to do more than glance at their daily paper. It is as necessary for him to read his paper each week as it is for the stock broker to watch his ticker.

Replies are received each week by our advertisers from all parts of Canada. Don't be satisfied with local mediums. There is only one paper that will carry your message to the hardware men in all Provinces of the Dominion.

SCREW CABINETS

Saves Time—Nothing is more annoying to a customer than to have to wait ten or fifteen minutes while a clerk searches his st ck for a certain size or style of a screw or bolt. Get a reputation for neatness and quickness. It will be worth hundreds of dollars to you.

Saves Space—Few hardwaremen have more space than they need. A screw case enables you to keep all your small articles together and no space is wasted. The case we illustrate contains 74 Bennett patent steel drawers which can be divided into 150 compartments.

Saves Your Stock—This case is made with a steel back, which keeps out all dust. If you have a screw case there will be no danger of some day stumbling on a box of screws in some corner which you did not know you had.

Drop us a post card and we will give you full information as to size, different finishes of wood and prices.

WESTERN HARDWAREMEN'S CONVENTION

Good Meeting at Winnipeg Where Matters of Moment were Discussed—Wholesalers Selling to Consumers Denounced—Too Long Credit being Given—Retail Merchants' Association Censured for Negligence—To Settle on Dues in February—Trade Papers Thanked.

The convention of the Retail Hardware and Stove Dealers' Association of Western Canada was held at Winnipeg on the 25th inst. A good attendance representative of Manitoba, Saskatchewan and Alberta was present, and the meeting was a success from every standpoint. President A. J. Falconer, of Deloraine, was in the chair, and after welcoming the delegates, spoke briefly of the good work that had already been done by the association, and that will continue to be done.

Report of Secretary-Treasurer.

The secretary-treasurer, J. E. McRobie, of Winnipeg, to whom great credit is due for his organization and general work, submitted his report, which was as follows :

Secretary's Report.

I take pleasure in presenting to you my report of the work done since the meeting last February. As shown in the financial report, the membership at that time on the roll was 279; since then we have added 56 new members, making a total of 335 which have been enlisted to date. From this, however, we have to deduct 21 who have either sold out or retired from business, leaving us with a live membership to-day of 314, made up as follows: Manitoba, 158; Saskatchewan, 102; Alberta, 54. This, I think, is a very satisfactory showing when it is taken into consideration that we have only a possible 400, or a little over, legitimate hardware dealers to depend on for our membership.

Regarding the workings of the association, I have to report success in some cases, failure in others. I have visited a number of districts and have had some very good meetings: others, I regret to say, I have spent time and money on with no results, owing to the non-attendance of dealers, who had ample notice of such meetings.

I am satisfied, however, that our association is progressing as rapidly as can be expected. The association now extends from Winnipeg west to Edmonton, north to Prince Albert and south to the boundary. This is a very large territory, which takes very considerable time and expense to cover. I expect, however, to have this accomplished before your next meeting in February and have the distant towns formed into strong local districts, calling them together at a central point during the bonspiels and have them fixed up in good shape for the starting out of the Spring trade.

In order to accomplish this it is necessary that the members should remit their fees promptly as without the necessary funds the work would be, to a great extent, retarded, and I trust that the members who have not already paid this year's dues will do so at once.

The balance sheet shows an amount outstanding of $1,636. In explanation of this I wish to say that the greater part of this amount is due by members who have not as yet had this year's account tendered them, owing to the fact that it was late last Fall when they joined the association and I thought it advisable in the interest of the association not to ask them for their dues until some time next month, when I trust they will all remit promptly.

Now, as regards the working of the association, I think, as far as we have gone, it has been satisfactory. You have had your little difficulties from time to time, but, I think, on the whole it has worked out to a material benefit to you all.

The relationship between the jobbers and the members of this association, with one exception, has been much improved during the past few months. In each case, with the one exception, when I had occasion to approach them, I have been received with every courtesy, and the matter in question either satisfactorily explained or the possibility of its recurrence eliminated. This should be a matter for congratulation to you all.

A feature which has been introduced for your benefit, and which it is to be regretted, a greater number have not taken advantage of, is the "Credit Collection Forms" issued to you free of charge. I have received testimonials from a great number who have used them stating that they alone are worth many times the fee charged, as it has been the means of them collecting debts which they had given up as down and out.

In conclusion, gentlemen, I would ask for the hearty support of the members in the good work we are endeavoring to accomplish. I trust at our next annual meeting to report as having secured every dealer in the three provinces as members of this association.

Respectfully submitted,

J. E. McROBIE.

To Form Dominion Association.

Among the questions of interest to the association and the trade to come up for discussion was the advisability of forming a Dominion hardware and stove dealers' association, which would include the already existing bodies in Ontario and the west. Weston Wrigley, secretary of the Ontario Retail Hardware and Stove Dealers' Association, who was present at the Winnipeg meeting, was delegated to carry a proposal of this nature to the Ontario meeting to be held in Toronto on September 4 and 5.

A Growing Grievance.

Wholesalers selling to consumers was a grievance brought before the meeting, and made the subject of considerable discussion. This is a matter which is of personal importance to everyone in the trade, as there are few, if any, who have not felt the effects of such selling. A resolution was passed condemning this class of business, and members were urged to be unanimous in their efforts to have it stopped.

Too Much Credit.

A resolution was also passed urging the curtailment of credit. The time given by retailers was altogether too long, and the nearer the cash basis a man could bring his business, the better it was for all concerned.

Relation to Retail Merchants' Association.

The relations between the Retail Hardware and Stove Dealers' Association of Western Canada and the Retail Merchants' Association of Canada was again the subject of long discussion. The matter of fees was brought up, but it was decided to withhold settlement of the question until the February meeting, when it will be finally disposed of.

Negligence of Merchants' Association.

There was great dissatisfaction among the delegates at the neglect which characterized the attitude of officers of the Retail Merchants' Association, and indignation was expressed at the manner in which E. M. Trowern ignored and neglected to answer important communications.

Trade Papers Thanked.

A resolution was passed thanking trade papers for the support they had given in association work, and for the way they had thrown their columns open for the discussion of grievances and the dissemination of news.

A resolution was also passed thanking Secretary Wrigley of the Ontario association for the interest shown by his attendance at the Winnipeg meeting.

Large Membership.

The list of members now enrolled by the Retail Hardware and Stove Dealers' Association of Western Canada is as follows :

City of Winnipeg.

J. H. Ashdown Hardware Co., Limited.
Leon Abramovich.
Anderson & Thomas.

ADDITION TO OFFICE EQUIPMENT.

Lewis Bros., the Montreal wholesale hardware firm, have just installed in their head office a Burroughs electrical adding machine, of the very latest design. This machine, which is the first of its kind in Montreal, and probably in Canada, possesses a great many advantages over the old-style adding machines, and is very speedy and almost noiseless in operation. The adoption of this latest and surest system is another example of the way Lewis Bros. keep on the lookout for new things that will "help some."

PIONEER AND PATRIOT.

Not many men arrived at their 75th year continue to give their time to furthering the business interests of their country. Such an one is C. M. Creed, of Halifax, secretary of the Maritime Board of Trade. The boards of trade in the Atlantic provinces are public spirit-

C. M. Creed, Halifax.

ed bodies with a wide range of interests, and Mr. Creed by his long experience and ability is eminently fitted for the good work he is doing. He enters upon his 75th year on July 22, and The Grocer joins his many friends in wishing him many vigorous and happy returns of the day. The annual meeting of the Maritime Board will be held at Amherst, N.S., on August 15.

HEATING COMPANY TO BUILD.

A new industry of considerable importance will be established at Owen Sound or Toronto Junction in the near future by the Supreme Heating Co.

The company will manufacture stoves with which they claim complete combustion will be produced, and a saving of 50 per cent. on wood or soft coal, and 30 per cent. on hard coal, will be effected. The device was patented by W. R. Hampden, recently of San Francisco, who has spent the greater part of his life in chemical research.

The following officers of the new company have been elected: President, Hon. A. G. McKay; vice-president, William Taylor; secretary-treasurer, S. J. Parker; managaing director, A. J. Ross; superintendent of factory, W. R. Hampden.

MORRISBURG TINPLATE WORKS.

An appeal from the court of revision of the Village of Morrisburg to his honor Judge Liddle, on the assessment of the buildings and land deeded to the Canada Tinplate & Stamped Steel Co., Limited, by J. Wesley Allison, was heard at the town hall in Morrisburg on the 23rd inst. The property was assessed to J. Wesley Allison instead of the company and the appellants asked to have the assessment changed to the owners as shown by the records. Mr. Allison had appealed on the grounds that it was exempt. He stated under oath, that while the deed was duly executed, it had been placed on record by mistake, and that the company had not paid him one dollar for same, that until they paid him, the property belonged to him, and that it was still in his possession, and that until they complied with their agreement with him they had no rights as owners. The judge changed the assessment to the company, with Mr. Allison as occupant. Mr Allison also stated that the buildings had not enhanced the value of the land, and were practically of no value unless used for the purpose for which they were built.

THE WORLD'S IRON SUPPLY.

The Scientific American recently published an article on "The Impending Exhaustion of the World's Iron Supply," which has brought to that journal the following from T. F. Van Wagenen, of Denver, Colorado: "Allow me to inform those who are unnecessarily worrying themselves over this matter, that the already known iron deposits of Mexico, many of which are close to the sea, are ample in themselves to supply the iron furnaces of the world for at least the next half century, at the present rate of consumption. Moreover, our neighbor's mineral resources are as yet scarcely looked over, vast areas being unknown in detail to white men. I have spent the bulk of the last twelve months traveling in Mexico, from the Rio Grande to the Isthmus of Tehauntepec, and in that time have seen enough of available deposits of iron of excellent quality to calm all fears as to a possible scarcity of cheap ores of the metal."

He might have gone further and spoken of the vast deposits that have been and are still being found in Canada. American writers are prone to consider the United States as the world, leaving out of count the as yet unworked mines in other lands.

WESTERN BOARD OF TRADE.

At Redvers, Sask., a board of trade has been organized with these officers: President, R. Douglas; secretary-treasurer, L. T. McLanders; executive, J. Dodds, W. Montgomery, H. Bowers. The first step they purpose taking in hand is the establishing of a bank and elevator.

RETAIL HARDWARE ASSOCIATION NEWS

Official news of the Ontario and Western Canada Associations will be published in this department. All correspondence regarding association matters should be sent to the secretaries. If for publication send to the Editor of Hardware and Metal, Toronto.

Officers Retail Hardware and Stove Dealers' Association of Western Canada:

President—A. J. Falconer, Deloraine.
First Vice-President—J. B Curran, Brandon.
Second Vice-President—W. M. Gordon, Winnipeg.
Secretary-Treasurer—J. E. McRobie, Winnipeg.
Executive—Alberta, A. E. Clements, Olds; C. F. Comer, Calgary; A. R. Auger, Okotoks.
Manitoba—H. S. Price, Boissevain; A. P. Macdonald, Winnipeg; O. Gilmer, Winnipeg.
Saskatchewan—G. K. Smith, Moose Jaw; S. A. Clark, Saskatoon; J. R. Fox, Weyburn.
Officers Western Board (elected by general merchants and hardwaremen in joint session): President, W. G. McLaren, Souris, Man.; vice-president, G. K. Smith, Moose Jaw, Sask.; H. C. Hamelin, Winnipeg, Man.; secretary, W. A. Coulson, Winnipeg, Man.; treasurer, J. E. McRobie, Winnipeg, Man.; auditor, J. A. Lindsay, Winnipeg, Man.
Association offices, 53 Scott building, Main street, Winnipeg.

Officers Ontario Retail Hardware and Stove Dealers' Association:

President—A. W. Humphries, Parkhill.
1st Vice-President—W. G. Scott, Mount Forest.
2nd Vice-President—J. R. Hambly, Barrie.
Treasurer—John Caslor, Toronto.
Secretary—Weston Wrigley, 10 Front St. East, Toronto.
Executive Committee—The officers and J. W. Peart, St. Mary's; M. R. Marshall, Dunnville; D. Brocklebank, Arthur; F. W. Jeffery, Midland; E. P. Paulin, Goderich, and Frank Taylor, Carleton Place.
Auditors—J. W. Peacock and C. F. Moorhouse, Toronto.

COMING EVENTS.

Convention of Ontario Retail Hardware and Stove Dealers' Association, in Toronto, on Sept. 4 and 5.

ADDRESSES ON EXPRESS PARCELS

In Hardware and Metal of June 2 a letter from C. E. Noble, Dundalk, suggested that jobbing houses should arrange to have their names attached to express parcels and bills to aid their customers in checking up the proper amount of expressage against each parcel of goods. The matter was taken up with the express companies by the secretary of the Ontario association, the Canadian Express Company sending the most satisfactory answer.

James Bryce, general manager of the Canadian Express Co., Montreal, replied as follows: "My understanding of Mr. Noble's suggestion is that it would be a convenience to you if the shippers' names were shown on the advice of arrival or receipt for charges. We would be glad to carry out this idea where it is practicable. As a rule, advice notices and receipts for charges are made from way bills, and only a few way bills show the names of shippers. It is not our general practice to enter names of shippers on way bills, as shipments have to be way-billed so rapidly at a great many places that it is necessary to save the time that would be consumed in inscribing the shippers' names on the bills. This saving of time is considerable at places where hundreds of parcels must be billed in a short space of time, and as the shippers' names are not really essential for the company's information, same are omitted. At some places the names of shippers are designated on the way bills by initials. This is intelligible to the sending office, but not to the delivering office. A great many shipments are delivered without any advice of arrival or receipt for charges being issued, but in cases where advices or receipts are made out, employes would have to get the shippers' names from goods. A good many parcels do not show names of shippers. We would be very pleased if all shippers would put their names on their shipments. We will issue advice to our agents along the line of Mr. Noble's suggestion."

W. S. Stout, president of the Dominion Express Company, Montreal, wrote: "It is not the practice, and is not practicable to require shipping bills with express shipments and without such shipping bill our employes are not in a position to show the name of the shipper on way bills except where the shipper's name is on the package and when it is shown on the package I assume that fully answers the purpose of the consignee."

Members of the association and readers of Hardware and Metal are invited to express their views on this matter, having in mind the replies of the express managers to Mr. Noble's suggestion.

CAMPAIGN AGAINST PEDDLERS

In a recent issue we referred briefly to the campaign which has been initiated by the members of the Inland Empire Implement and Hardware Dealers' Association for the extermination of "buggy trailers" and "range peddlers" from the territory covered by the membership of the association. What is styled the "Peddlers' Association" has been formed, the expenditures of which will be borne by a large fund which has been raised by the 200 members of the association, who have been assessed $20 each, and which will be further augmented if necessary. Jobbers of steel ranges and vehicles have co-operated with the retail hardwaremen in this fund and have sent in a number of $100 subscriptions, in several cases an intimation accompanying the checks to the effect that "there is more where this came from." The plan of the Peddlers' Association is referred to as follows:

As soon as a peddler of either buggies or steel ranges enters a town the local dealers in that town get out their teams and wagons, load them with goods as good or better than the peddlers' and then when the peddlers start out the local men follow them. When the peddler drives into a farmyard the local men "butt in" and show Mr. Farmer that he can save from 25 to 40 per cent. by buying goods of the home dealer — any home dealer, for the association does not aim to sell goods for any particular dealer. While all this is going on the secretary of the Inland Empire Association sends men from headquarters to relieve the local merchant, so that he can return to his business, and the paid agents of the association take up the work where the local merchant left off and stay with the peddlers until the latter give up the game and leave the territory which the association has undertaken to protect.

The campaign thus far, we are advised, has been very successful, and in one instance where buggy peddlers were followed for three weeks they sold but three rigs, and these at prices very much under those which they expected to obtain. One rig for which $165 was asked was finally sold for $75, and another for which $140 was asked was knocked down for $98.

To quote E. W. Evenson, of Spokane, the energetic secretary of the Inland Empire Association, "whether the peddlers have a longer sack than the merchants remains to be seen, but one thing has been proven and that is that they (the peddlers) cannot sell their wares while a representative of the local merchant is on the ground."

A TOUGH EXPERIENCE.

A hustling retailer with his eye on the trail for new business had been selling a mill in town a good deal of cotton waste, but not in some time had he sold them any, writes an American traveler. Down to the mill he went one day with some good cigars in his pocket. He knew the buyer; in fact, they had called each other by their first names ever since childhood. The topic of waste was brought up, and the buyer said: "Charley, I would like to get it of you, but I don't see how we can. If you give us the goods at the right price you will get the order. I can't tell you what we're paying, but I will tell you when you quote the right price."

The dealer went back to his store and wrote the jobbers for quantity prices. When this information came he took it to the buyer. "Nothing doing. Too high," was the verdict. Nothing daunted, the dealer wrote again, this time to the mills in Rhode Island, for samples and bale rates. Their reply was ½-cent per pound under the jobbers', so gleefully he set out for the mill. He was told he was too high, and because of the friendship the buyer compassionately told the dealer that they were buying direct from a mill in carload lots, having even put up an isolated building into which to store the highly inflammable stuff. Now, who on earth could compete with that soul-stirring, nerve-racking gait? And yet a few years before that hardwareman had contributed money to a fund that the local board of trade had collected with which to buy a site to give it to that very mill as an inducement to have them locate in that city.

WHAT MEMBERS ARE SAYING.

"We think that the benefits of the Ontario association now formed will be so far reaching that any merchant doing the ordinary volume of business stands to make $100, and this we consider a good investment for the work that is being done by a very few," writes one of the Eastern Ontario members.

"We are glad to join the association and hope to hear of its prosperity and that you will eventually get the desired number of members to make the association strong enough to be effective in righting wrongs. The cartage matter has been a grievance from the start and should be abolished altogether." — An Essex County member.

WINDOW AND INTERIOR DISPLAYS

A GUELPH PAINT WINDOW.

A paint and brush window display must of necessity be practically confined to the products of one paint factory and the sample of the window dresser's art shown on this page is an excellent arrangement of the products of the factories of the Canada Paint Company. The display was gotten up by G. M. Davison, an enterprising clerk in the employ of G. A. Richardson, hardware merchant, at Guelph, and with the exception of devoting a little too much space to the sign in the background, his work is worthy of much commendation.

The arrangement of the sample cans of paint, the brushes and the sample colors is very artistic, but with the mounted "stag" heads and the color cards the bottom is a trifle too crowded. The "stag" heads might have been displayed to advantage on the large window card in the background. The large mirror on the side wall of the window tends to enlarge and improve the appearance of the display, the brushes hanging on the side being reproduced in the reflection. The hanging of the color card on the face of the mirror is, however, likely to detract from the general effect desired to be obtained by the use of the glass.

COLORED SAND IN WINDOW DISPLAYS.

Having discovered the advnntages and use of colored sand and its adaptability to window adornment, I am led to give a number of suggestions as to its possibilities and usefulness (to which there really seems to be no limit) writes F. B. M. in the Iron Age.

The secret of the whole thing lies in the coloring of the sand. The writer first tried dyeing the sand with coloring matter, which is a more elaborate way of preparing it, but for ordinary purposes it can be more quickly and easily colored by mixing in a dry state with powdered paints. Lamp black stirred with the sand makes a fine material for lettering, and flour sprinkled on first gives a fine white background.

Arranging a Fishing Scene.

Take out the time-honored cloth covering of the flooring of your window and cover the flooring about 1 inch deep with what is known as "white sand." You will need about a barrel of it for elaborate designs and different changes of color from time to time, and it can be readily swept out when you desire to change the window for something else.

Obtain some wire cable, say about 6 feet long and 2 inches in diameter. Unwind a few inches of one end and spread out for roots. Fasten these to the floor with staples, unwind the main strands of the opposite upwardly extending end, about 2 feet back, thus forming branches of the tree when they are bent out from the centre at different heights from the trunk of the tree. If they are to present a natural appearance the leaves can then be made by tying on the branches either teaspoons or kitchen spoons. Be sure to have the bowl of the spoons inverted and facing downward, so as to present the drooping form of a leaf.

The angler can next be made by taking a large straw hat, a false face and an up-to-date suit of clothes, stuffing them with excelsior and placing in a sitting posture on a mound of sand at the base of the tree. The proper position of the figure may be maintained by tying fast to the tree trunk stuffed gloves for hands, which should be grasping rod and reel. Place fly boxes, landing net, basket, etc., on the sand by the side of the figure.

Here is where the sand plays an important part. A few feet from the figure where the line is to be cast take a large pair of compasses and draw several large circles in the sand in imitation of the ripples of water commonly extending out from the line when it is first cast into the water. Then place a screw eye right in the centre of these circles, unwind the line and tie fast to the screw eye buried in the sand ; if float is used on line bed in sand at this point to proper depth. Or in case you can secure a good imitation of a fish you can by making the sand deep enough cover up part of the fish's body, so that little more than the head is exposed, as in the act of being caught. Take a pasteboard box and put in a quart or more of sand and a little green and blue coloring matter, and stir and mix together until a natural color of water is obtained, which can be shaded and darkened with a little lampblack. Start in and sprinkle this color over the white sand from the front of the window to the rear, diminishing the width of the brook as it recedes from the window. Mix some more sand in like manner of a light green shade in imitation of grass and sprinkle on each side of the stream, being careful to leave a space of bare white sand for a shore line to separate the water from the banks of the trout stream.

Attractive Paint and Brush Display Arranged by G. M. Davison, Guelph.

A man may have more money than brains without having an overplus of either.

NEW ADVERTISEMENTS.

Burr Mfg. Co., Cleveland, Ohio.

STARTING IN BUSINESS.

Two men who have succeeded in life were discussing whether it is better for a young man to become his own employer as soon as an opportunity can be found, or to go on in a steady position and work his way up to the top of the ladder. One had worked in a factory for a small salary, and tiring of this had branched out for himself. It was up hill work for a time, but eventually he made the grade, and established himself on a firm footing. The other had climbed to a managerial position as an employe, but both agreed that provided a young man had the qualifications, the best thing he could do was to strike out for himself.

It is a current saying that ninety-five per cent. of men who engage in business fail. This statement has been long accepted as the last word and handed out to the young man who would make a business venture, by over wise friends. In reality there is no truth whatever in such a statement. Almost the opposite is the truth, according to Dun, who shows that instead of ninety-five out of a hundred failing, ninety out of a hundred succeed ultimately.

There were of course times when they met with reverses and were compelled to begin over again, but that is not failure. Some have "failed" more than once, but have gone at it again and with their past experience have made a most complete success. It is what is learned in adversity that is the most valuable asset in a business career.

But while much is heard about branching out for oneself and seizing opportunities, it must be conceded that it is not given to all to become Carnegies. Many there are — bright men, too, in their chosen line—who make dismal failures in business, and who had much better have remained an employe all their natural days. A good follower is often as successful as a good leader. A man sometimes goes as fast and as far by following as being right up with the band. Most men get on as fast as they deserve and it is not prudent to be over anxious to get to the front, unless one has experience and the consciousness of ability to carry out preconceived plans.

In reviewing the failures for a given time, statistics showed that ten per cent. were fraudulent, but so carefully guarded as to be immune from legal proceedings. Neglect, speculation, unwise credits, and undue competition are the other causes. An honest and progressive man in looking over the causes ought to be able to altogether eliminate the first four—fraud, neglect, speculation, and unwise credit—leaving only the one—undue competition — that he must guard against, which is a matter of judgment as to locality more than anything else.

Because someone has said ninety-five per cent. of those who go into business fail, is no reason why any young man of intelligence and experience should be frightened. There will be ups and downs in his career, no doubt—life would not be interesting if there were not—but if he is made of good stuff he will eventually make good.

POWER FOR MUNICIPALITIES.

A conference of municipal delegates representing municipalities from Toronto west to London was held at Galt this week. The harmony which prevailed showed the spirit in which the public have embraced this gigantic scheme. Hon. Adam Beck and Cecil B. Smith addressed the delegates and took it upon themselves to answer the adverse criticism expressed through the correspondence columns of the daily papers. There was no weakening in the stand taken in favor of carrying out the original plans, and estimates relative to the cost, maintenance and distribution of power were again taken up and explained by the speakers.

To avail themselves of the privileges of the act, the municipalities must cooperate with the Government, and this they decided to do. But while it is well that there is such unanimity in endorsing the act of the Government regarding the development of Niagara Falls, there should be no undue haste in dispelling the criticism of those who are opposed to the present plan of development, for only by the expression of such opinions are the difficulties to be seen. Few questions that have come up for public assent are of more importance than this one, as it means the outlay of millions of money. That the power can be generated and distributed is not the issue—that is accepted. The method that is most economical and most advantageous to the public is what must be well thought out. In a multitude of councillors there is wisdom, so let no one who has new light to throw on the subject be denied an opportunity.

THE VALUE OF CREDIT.

When a man's credit is gone he has little left that is of any commercial value. Experience he may have, and social position, but without the standing which stamps him as a man who will meet his obligations, it is a bootless task for him to try to carry on a successful business.

A banker's confidence in the man to whom he lends money is based upon the experience, the application and the character of the man. And character plays no small part in the essential elements considered. But it is not enough simply to be honest. Many a man is honest and nothing more. He must be able to accomplish things, for without this he cannot be considered a good risk.

There is no royal road to credit: its building is the work of years. It is one of the most precious things in a man's business career, and should be guarded zealously and, above all, it should not be dishonestly take advantage of when once established. In every deal, credit plays its part with cash. If it were not so there would be little chance of a man with limited means rising above his present station in life, and only those who were fortunate in already having money could do business to advantage. The security of the largest business houses in the land today was founded upon their credit — their ability to make good—quite as much as upon the amount of their worldly possessions.

NO NEED FOR ALARM.

According to a telegraphic report the Welsh tinplate manufacturers at their quarterly meeting expressed alarm at the report that Canada was making extensive arrangements to manufacture her own plates.

In view of the publicity given to the proposals of the promoters of the Morrisburg tinplate proposition, it is incredible that the Welsh manufacturers could take seriously any "hot air" talk indulged in by parties interested in the

stock of the Morrisburg scheme. So far as Morrisburg is concerned the works are a dead issue, no activity being evident, and in any case, as has been clearly pointed out by this paper, there is absolutely no possibility of any serious competition to Welsh tinplate interests arising from the mills at Morrisburg.

A TRAVELER'S TIME.

A traveler was heard lamenting the other day about the amount of time he was compelled to lose in waiting for an appointment with a storekeeper in a small town. This traveler called on his man but found him engaged. He went out and came back again in an hour's time, but found the same condition of affairs. The man with whom the storekeeper was speaking was a resident of the town, who could be seen almost daily, but the traveler had but a short time to remain before his train left, and felt that an effort should have been made under the circumstances to give him an opportunity to do business and get away.

It is hardly fair to mete out such treatment to a man, but from reports that are heard from time to time it is not an infrequent occurrence. Unfortunately there are merchants who have a feeling that a man having goods to sell is under an obligation to them, and they must show it by keeping him hanging around until they feel disposed to talk with him. This is an unkind spirit, and one that never begets any good feeling from the man who is thus snubbed. It is not necessary to turn one's business upside down to accommodate any traveler, but a kindness done in making an effort to assist him to facilitate his business is only right. From a purely selfish standpoint it is also the best policy, for as a rule the experienced traveling salesman is in pretty close touch with most things that are going on in the trade, and is often in a position to give the merchant a pointer that is worth a great deal more in value than the time taken in seeing the traveler.

But there is another side to the story. The merchant has his grievances and his "thorn in the flesh" of being solicited in season and out of season for a sample order of this or that that he really does not want. He states plainly that he has sufficient of the goods enumerated in stock, and does not care to do any more buying, but the drummer man remorselessly tags after him, insistent and argumentative. By some this is called zeal, but oftener it is poor judgment. It is never right to try to sell a man what he does not want, and it is the importunate salesmen who do this that put merchants on the defensive when they see a traveling man enter their store.

TRADE NEWSPAPER PUBLISHER HONORED.

In the language of official documents, our hearty congratulations are due and are hereby tendered to our confrere, the publisher of the Ironmonger and other trade newspapers in London, England, the Right Mon. Sir W. Vaughan Morgan, Bart., Lord Mayor of London. In the list of honors published the other day, Mr. Morgan's name appears among those on whom His Majesty conferred a baronetcy. This is a hereditary title, but as Sir Vaughan has so far remained a bachelor, the title may die with him.

THE SITUATION IN METALS.

A general weakness has pervaded the metal markets for some days, and nearly all ingot metals are to-day commanding prices considerably short of their last week's figures.

Ingot tin is still erratic—is, if anything, more unsteady than at our last writing. Looking back upon the past ten weeks, the remarkable condition will be noticed of an advance aggregating 11 cents a pound, closely followed by a decline of 13 cents, with the market still falling. Consumers in most countries seem to have bought heavily before the decline, under the impression that values would be permanently enhanced. After a period of record prices, the market, unable to sustain the boom, collapsed, and Canadian dealers are this week quoting as low as 41½ cents.

Antimony prices are lower this week, but at present they are firming up again. Some dealers, indeed, seem inclined to foretell a return to the record prices of a few weeks ago, but conservative students of market conditions consider that this is a rash prophecy.

We reported last week that some of the better known European brands of zinc spelter had not followed the market but were being maintained at the old level. Since then, however, even these producers came to see the weakness of the situation, and they have since revised their quotations to be in keeping with the general tendency.

Copper continues at unchanged prices on the Canadian market, and there is considerable call for the metal on the part of manufacturers. This is about the only ingot metal which has not declined recently.

Pig lead was unable to maintain the increase of last week. Although there is an excellent demand manifest, bear operators are in command of the market, and a falling off of five cents is recorded.

Sheet zinc has declined, to keep pace with the falling market in spelter, a drop of one-quarter cent a pound being declared. All other sheet metals maintain their strength and show an active inquiry for both spot and future deliveries.

BOARD OF TRADE INFLUENCE.

The influence of the Board of Trade in Canada in the realm of commerce and finance should be extended into the fields of social and political progress, not party politics or fads, but the everyday business of managing the affairs of the whole community, municipal, provincial and federal. The individual who makes a success at business would not necessarily be a success as a public man, but in the bulk the business men of a community as represented by the board of trade should, if their interest was aroused, decide wisely on questions of public polity.

One principal reason why the boards of trade are not more influential is that many of them have not the right kind of secretaries. A board of trade secretary should be an expert in the matter of detecting questions calling for action by the board. He should be a man with a knowledge of public affairs. Everything on the order paper of council, legislature and parliament is of moment to the business community. The board secretary should know the significance of issues as they arise, keep his board informed and advise them when to take action. Many things vital to the commercial interests of a community are neglected by the public bodies that should deal with them. Boards of trade could force action in many instances if they were so minded.

It may be urged that this is the business of the president and executive. That is just the point. The elected officers are business men absorbed in their own affairs; what we claim is that the secretary should be specially commissioned to advise the board and as a body inform them of the ins and outs of questions which in the public interest they should take up. To do this well the secretary must have a working knowledge of public affairs and public bodies. About eighty per cent. of public business is in the hands of municipal councils. Here is a large field in itself for boards of trade.

The Hamilton board recently made a progressive move that is decidedly in the right direction. It has decided to engage an agent to devote his whole time to the affairs of the board. He will investigate all complaints about transportation and such matters. The board appointed committees to boom Hamilton-made goods, and to co-operate with the aldermen when important matters are before the council for consideration.

C. M. A. MONTREAL BOARD.

The balloting for members of the executive committee of the Montreal branch, Canadian Manufacturers' Association, was concluded on Thursday, and the results show that several men well known to the hardware trade have been honored. The new officers are as follows :

Chairman—J. S. N. Dougall, of McCaskill, Dougall & Co. ; vice-chairman, S. W. Ewing ; executive committee — Fred Birks, J. H. Birks, S. S. Boxer, Geo. E. Drummond, of Drummond, McCall & Co. ; Geo. Esplin ; F. W. Fairman, of the Dominion Wire Manufacturing Co. ; Robt. Gardner, of Robt. Gardner & Son ; Chas. B. Gordon ; J. R. Kinghorn, of Montreal Rolling Mills ; Robt. Munro, of Canada Paint Co. ; L. H. Packard ; Hon. J. D. Rolland ; Geo. W. Sadler ; E. F. Sise ; Clarence F. Smith ; W. T. Whitehead ; F. Howard Wilson and R. J. Younge, of the Canadian Rubber Co.

JENKINS VALVES IN MONTREAL.

Jenkins Bros., valve and joint manufacturers, who for upward of a quarter of a century have been doing business in New York, have acquired 120,000 square feet of land in Montreal on St. Remi street, between Acorn avenue and the G. T. R. tracks. They will immediately begin the erection of a two-storey brick factory with a frontage of 200 feet and a depth of 110 feet.

H. D. Gordon, mechanical engineer for Jenkins Bros., has been in Montreal for some time, arranging the details of the building, and he expects that the plant will be ready for operation in the Spring. To begin with, in the neighborhood of 100 hands will be employed, and later on it is expected that the staff will be increased to 250 hands.

Valves and other appliances which they manufacture are subject to a Canadian duty of 30 per cent., and the firm consider that the growing condition of Canada makes it well worth while to erect a factory here and take full advantage of the Dominion trade.

RETURNED FROM WEST.

Col. Gartshore and J. E. McConnell, of the McClary Mfg. Co., London, returned last week from tours to the Pacific Coast and through the new provinces. Both reported bright crop prospects and a likelihood of a large trade in Canadian stoves and furnaces in Western Canada this Fall and Winter.

Col. Gartshore, on his way east, visited many of the newer towns on the branch lines in order to form impressions regarding the possibilities of the growing west. He brought with him a typewritten list of about two dozen wholesalers already established at Calgary—he feeling that residents of the "cent belt" (as some westerners who despise copper coinage delight to call Eastern Canada) would hesitate to believe the stories of Calgary's growth without documentary proof.

Mr. McConnell was on his honeymoon trip, combining business with pleasure by calling on all the company's branch depots and securing information which will be of great value in conducting future "publicity" campaigns of McClary heating and cooking goods.

SUCCESSFUL JOBBERS AND SALESMEN.

No. 27.

Few commercial men in the Maritime Provinces are more widely and favorably known to readers of Hardware and Metal than Wm. Knight, president of the Amherst Foundry Company, Amherst, N.S., whose portrait is reproduced this week. Mr. Knight, in addition to his duties as president, acts as traveling salesman, and the success which has attended the Amherst Foundry Company is in a great measure due to his untiring zeal and energy in forwarding the interests of his company.

Mr. Knight was born in Leicester, England, and came to Nova Scotia about twenty years ago. He has been identified with the stove and furnace trade for the past fifteen years, during which time the business with which he has been connected has developed very rapidly and gives promise of increased growth and expansion in the future.

WM. KNIGHT, Amherst, N.S.

President and Traveling Representative of the Amherst Foundry Co.

Beaver brand enamelware is becoming widely known amongst plumbers in all parts of Canada, O. Vickery, the Toronto representative of the Amherst Company, reporting that his sales have increased from one carload a month to two carloads per week within the past year. The Improved Cumberland furnace, another of the company's products, is also well known, particularly in the Maritime Provinces.

THE SCREEN DOOR TRADE.

Messrs. John Sanderson, Brantford, and John Harold, Brantford, of the Sanderson-Harold Co., Paris, manufacturers of refrigerators, screen doors, etc., left last Thursday on a business trip to Winnipeg and the west. Mr. Sanderson is also president of the Melotte Separator Co. and the Adams Wagon & Carriage Co., Brantford. They report that the trade in screen doors this year has been eminently satisfactory, although there has been no advance in prices in response to the 35 per cent. rise in the lumber going into the doors, etc.

Another gentleman who returned west on Thursday was H. R. Harmer, who represents the above companies with headquarters at Regina. Mr. Harmer has been east on a combined business and pleasure trip, visiting his old home at Toronto.

SHIPPING RAILS BY WATER.

The steamer Turret Crown left the Montreal harbor on Wednesday for Sydney, C.B., where she will load steel rails at the works of the Dominion Iron & Steel Co. The interesting point about this is that the Turret Crown will carry the rails back to the west through the canals and lakes.

From this time forward several other ships will be employed in the same trade, and quite a large traffic is likely to follow in this line owing to the great demand for steel rails which will result from the new railroad construction and extension of lines in the west.

SHARE WITH EMPLOYES.

The John Morrow Machine Screw Co. have set aside the sum of $1,500 to be divided among their employes and the employes of the Ingersoll Nut Co., which is under the same management.

The generous policy of sharing their profits with their employes was adopted by the company last year.

THE LATE SAMUEL HUMPHRIES.

Samuel Humphries, of Strathroy, Ont., father of A. W. Humphries, Parkhill, Ont., president of the Ontario Retail Hardware and Stove Merchants' Association, died last week. He was over 80 years of age and had been for many years a carriage manufacturer in Strathroy.

A NEW EXPLOSIVE.

Ammonal is the name of a new explosive about to be manufactured in Canada by the Harmsworths. The chief ingredients are nitrate of ammonium and aluminum. It will not freeze, or explode by friction or concussion. The only thing that will explode it is a detonator.

DISCRIMINATION CHARGED.

Canadian railways are charged by members of the Canadian Stove Association with demanding higher rates for transportation of stoves and ranges than the railroads in the United States for similar distances. This alleged discrimination is being looked into by the association, a committee of which met at the King Edward Hotel Tuesday. In the United States stoves are classed as third class matter, whereas in the Dominion they go in the second class. This classification means that Canadian roads get a higher rate for transportation.

HARDWARE TRADE GOSSIP

Quebec.

Alph. Terriault, plumber, Montreal, has assigned.

Mr. Rogers, of Rogers & Nicoll, hardware merchants, Perth, Ont., was a visitor in Montreal this week.

Albert Oliver, of the Clinton Fireproofing Co., Clinton, Mass., spent last week in Montreal calling on the building trade.

J. H. Brent, of Caverhill, Learmont & Co's western traveling staff, spent part of the week in Montreal, visiting the head office.

J. H. Roper, manufacturers' agent, Montreal, has returned from a business trip to Quebec, where he booked many good orders.

S. M. Walker, formerly with Lewis Bros., Montreal, and now with the Hudson Bay Knitting Co., is at Kennebunk Beach for a holiday.

Mr. Glassco, of the traveling staff of Geo. D. Wood & Co., wholesale hardware merchants, Winnipeg, was in Montreal on Friday of last week.

Among the hardwaremen to visit Montreal on business this week were T. Burrows, Lacolle; J. A. Paquin, St. Eustache, and Z. Bissonette, La Prairie.

D. McCormick, of the Pedlar People's traveling staff, Montreal, has returned from a vacation spent at Roden, P.Q. A. Dausereau, of the same office, is now enjoying his annual rest at Lawrenceville, Que. They all get holidays but "W. E."

G. G. Fields, of Wylands Limited, manufacturers of wire rope and netting, Warrington, is at present visiting Canada in the interests of his firm. J. H. Roper, of Montreal, has made arrangements to sell this firm's products in Canada.

Montreal jobbers are delighted at the following item, which was clipped from a Galt, Ont., newspaper: Ald. Scyffert —"I telegraphed in the afternoon to Montreal for a shipment of guns. The goods were here by first express from the east next morning. My dealings with Toronto houses are by no means so gratifying. Oh, no, they're not so slow in Quebec as we've been in the habit of considering them."

Ontario.

P. M. Young, hardwareman, of Almonte, advertises his business for sale.

Andrew Riddell, plumber, of St. Catharines, was in Toronto during the week.

Ottawa hardware dealers have decided to close Saturday afternoons until September 1.

James McGaw, blacksmith and carriage maker, Richwood, Ont., offers his business for sale.

T. E. Ryan, of Lewis Bros. & Co., Montreal, was in Toronto on a business trip during the week.

C. Thompson, of the Gurney-Tilden Co., Hamilton, spent a day or two in Toronto during the week.

R. G. Sturgeon, plumber, of Peterborough, was in Toronto, Wednesday and Thursday of this week.

George Maker & Co., North Bay, have secured part of Connelly's shop where they will carry on their business.

A. D. Kennelly, manager of the McClary Mfg. Co., Toronto, is spending a vacation in Niagara Falls vicinity.

Charles Morrison, of the James Morrison Brass Mfg. Co., Toronto, has returned from Chicago where he has been for some days.

Harry Smith, formerly of the Canadian General Electric Co., Peterborough, has gone into the hardware business at Didsbury, Alta., and will take his family there shortly.

W. S. Brock, representing the Ontario Lead & Wire Co., of Toronto, and the Standard Ideal Sanitary Co., of Port Hope, in the west, has returned to Winnipeg after a two-week's visit in Ontario. Mrs. Brock accompanied him.

R. A. Baines, of Baines & Peckover, Toronto, is bringing to a close a very satisfactory visit to Great Britain and continent. While Mr. Baines is by no means blind to the attractions of sightseeing, neither is he forgetful of the business opportunities awaiting him amongst the manufacturers. New arrangements are being made and new lines taken up, of which the trade will hear more upon Mr. Baines return to Toronto.

Western Canada.

S. Arthurs, blacksmith, Clearwater, Man., has sold out.

Kofka & Norris, blacksmiths, Davidson, Man., have been burnt out.

J. H. Kelly, has taken over the business of the Summers & Kelly Co., plumbers, Regina.

The store of Geo. Agnew & Co., hardware merchants, Minitonas, Man., was totally destroyed by fire.

M. W. May has purchased the blacksmith business of the estate of John Gowan, Westbourne, Man.

J. Fair, of the office staff of Geo. D. Wood & Co., has returned to Winnipeg from a three weeks' holiday trip to the east.

J. R. Henderson, of the firm of Henderson & Potts, Halifax, is expected in Winnipeg this week to consult with Marshall-Wells Co. regarding business in the west.

Chas. D. Waldon, of the Pease-Waldon Co., Winnipeg, and W. G. Jones, of the Pease Foundry Co., Toronto, returned to Winnipeg this week from an extended business and pleasure trip in the far west. Mr. Jones will return to Toronto shortly.

T. P. McIntyre, sales manager for the Marshall-Wells Co., of Winnipeg, has resigned his position to become president and general manager of the Ladysmith Stove & Iron Works, Ladysmith, B.C. Mr. McIntyre has had a long career in the hardware business in Manitoba and the Northwest, and has a wide acquaintance among western hardwaremen. For eighteen years he was connected with the J. H. Ashdown Hardware Co.

BRASS STRIKE IS OVER.

For more than a month past the brass foundry of the Robert Mitchell Co., Montreal, has been badly handicapped by a strike of 25 of their brass workers. During the present week, however, the difficulties were adjusted and the works are again in full operation.

When no arrangement could be arrived at between the employes and the men, it was decided to have the dispute settled by arbitration, James Ballantyne, master plumber, being chosen by the company, and Jas. Ainey, business agent of the Montreal District Council of the Brotherhood of Carpenters and Joiners, by the men. The arbitration after several conferences, failed to agree on the payments of time and a half for Saturday afternoon work when men are called back, and an advance in wages for the strikers who, it was claimed, were not skilled mechanics and were not expected to work on the best class of goods.

Finally, A. G. Hutchison, of Hutchison & Wood, was chosen as the third arbitrator, and he gave his award a few days ago. He awarded increases to 11 of the strikers and also one-half in addition to the regular rate for time over 55 hours a week, but only the regular rate for Saturday afternoon work.

SANDERSON PEARCY CO. FIRE.

Heavy damage was wrought Thursday night by a blaze in the basement of Sanderson Pearcy & Co's paint warehouse at 65 Adelaide street west, Toronto. The automatic system gave the first alarm, and on the arrival of the Bay street section a second call was turned in, summoning Chief Thompson and all the fire-fighting appliances in the downtown district. The flames were kept from spreading, and were confined to the basement and shipping room. The greater part of the damage was done by water and smoke to the dry paints in the cellar, which was heavily stocked. The loss will total nearly $10,000 with insurance of $54,000, divided among eighteen companies. The loss on the building, about $1,000, is covered by insurance for $10,000 in the Commercial Union Co. C. N. Haldenby, the manager, could not account for the origin of the blaze, the electric current being shut off. There will be no stoppage of business in any way.

MARKETS AND MARKET NOTES

(For detailed prices see Current Market Quotations, page 66.)

THE WEEK'S MARKETS IN BRIEF.

MONTREAL.

Solder—No. 1 declined to 23c.; No. 2 advanced to 20c.
Shellac—A 5c. advance.
Zinc Spelter—Declined 25 cents per 100 lbs.
Antimony—Quoted at 27c.
Ingot Tin—Declined 41½c. to 42c.
Pig Lead—Declined five cents.
Sheet Zinc—Declined 25 cents per 100 pounds.

TORONTO.

Old Wrought Iron—Advanced 50 cents.
Old Rubbers—A slight advance.

Quebec Hardware Markets.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, July 27, 1906.

It is stated by wholesale marchants here that trade shows a rather perceptible decrease over last week's volume. But, although the dullness customary to this season is undoubtedly at hand, it must be said that from all indications this will be neither so long nor so acute as is usual.

Orders coming to hand show that the demand is pretty well scattered over all Summer lines, with an increasing inquiry for Fall goods. Among the latter, guns and ammunition are commanding much attention and it is confidently expected that the approaching season will be a record breaker.

Prices remain steady, no changes in current quotations having been made since our last report.

AXES—The trade is without feature and prices are still quoted as follows: $7.60 to $9.50 per dozen; double bitt axes, $9.50 to $12 a dozen; handled axes, $7.50 to $9.50; Canadian pattern axes, $7.50 a dozen.

HANDLES—We give prices: No. 3, $1.25; No. 2, $1.50; No. 1, $1.90 a doz.; adze handles, 34-inch, $2.20 a dozen; pick handles, No. 2, $1.70; No. 3, $1.50 a dozen.

RIVETS AND BURRS—No changes have been made in prices quoted on the Montreal market. A steady turnover is shown and we still quote: Best iron rivets, section, carriage, and wagon box, black rivets, tinned do., copper rivets and tin swede rivets, 60, 10 and 10 per cent.; swede iron burrs are quoted at 60 and 10 and 10 per cent. off new lists; copper rivets with the usual proportion of burrs, 35 per cent. off; and coppered iron rivets and burrs in 5-lb. carton boxes at 60 and 10 and 10 per cent.; copper burrs alone, 30 per cent., subject to usual charge for half-pound boxes.

HAY WIRE—Not much of this line is moving just now as farmers will not be in a position to press this season's crop, for some time yet. Our prices remain as follows, though there is a great deal of cutting: No. 13, $2.45; No. 14, $2.55; No. 15, $2.70; net cash, f.o.b. Montreal.

MACHINE SCREWS—Orders of fair size are constantly coming to hand. We are still quoting discounts as follows: Flat head iron, 35 per cent.; flat head brass, 35 per cent.; Felisterhead iron, 30 per cent.; Felisterhead brass, 25 per cent.

BOLTS AND NUTS—Big orders are being received both from retailers and manufacturers. Our discounts remain 3-8 and smaller, 60 per cent. and 10 per cent.; 7-16 and larger, 55 per cent

HORSE NAILS—Sales are large for the season. We give the following discounts: C brand, 40, 10 and 7 per cent.; M.R.M. Co., 55 per cent.; P.B. brand, 55 per cent.

WIRE NAILS—There is practically no established price, but we quote nominally $2.05 per keg base, f.o.b. Montreal.

CUT NAILS—Business is sluggish in this line. We are still quoting $2.20 per keg base, f.o.b. Montreal.

HORSESHOES—A good steady demand has been maintained throughout the Summer. We quote as follows: P. B. new pattern, base price $3.50 per 100 lbs.; M. R. M. Co., latest improved pattern iron shoes, light and medium pattern, No. 2 and larger, $3.65; No. 1 and smaller, $3.90; snow pattern, No. 2 and larger, $3.90; No. 1 and smaller, $4.15. Light steel shoes, No. 2 and larger, $4; No. 1 and smaller, $4.25; featherweight, all sizes, No. 0 to 4, $5.60. Toeweight, all sizes, No. 1 to 4, $6.85. Packing, up to three sizes in a keg, 10c. per 100 lbs. More than three sizes, 25c. per 100 lbs. extra.

SPORTING GOODS—Jobbers are preparing for a big season in guns and ammunition and the other lines carried by the Montreal wholesale houses are also much in demand.

BUILDING PAPER—Trade remains fair and prices are steadily held at the figures quoted in our current quotations.

CEMENT AND FIREBRICK— The big demand continues to be a feature of the market. Our prices remain as follows: "Lehigh" Portland in wood, $2.54; in cotton sacks, $2.39; in paper sacks, $2.31. Lefarge (non-staining) in wood, $3.40; Belgium, $1.60 to $1.90 per barrel; ex-store, American, $2 to $2.10 ex-cars; Canadian Portland, $2 to $2.05. Firebrick, English and Scotch, $17 to $21, American $30 to $35; White Bros.' English cement, $1.80 in bags, $2.05 in barrels in round lots.

COIL CHAIN— We are still quoting as follows: 5-16 inch, $4.25; 3-8 inch, $3.75; 7-16 inch, $3.55; 1-2 inch, $3.35; 9-16 inch, $3.30; 5-8 inch, $3.20; 3-4 inch, $3.05; 7-8 inch, $3; 1 inch, $2.95.

FREEZERS—The big business for the year is over, but occasional orders are still coming in. We quote the following prices: American Twin, 2 quart, $2.30, 3 qt. $2.65, 4 qt. $3.25, 6 qt. $4.15, 8 qt. $5.10, 10 qt. $6.40, 12 qt. $7.75, 15 qt. $9.95, and 20 qt. $13; Gem, 1 pt. $1.35, 1 qt. $1.60, 2qt. $1.75, 3 qt. $2.15, 4 qt. $2.60, 6 qt. $3.25, 8 qt. $4.20, 10 qt. $5.45, 12 qt. $6.50, 14 qt. $7.25; Blizzard, 1 qt. $1.25, 2 qt. $1.70, 3 qt. $1.95, 4 qt. $2.35, 6 qt. $2.95, 8 qt. $3.70, 10 qt. $4.80, 12 qt. $5.75, 14 qt. $6.75.

GREEN WIRE CLOTH—There is still considerable business being done and the price remains steady at $1.45 per 100 square feet.

Ontario Hardware Markets.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, July 27, 1906.

New business is beginning to slacken off a little, but there is no complaint, as this has been one of the most prosperous seasons.

Goods continue to go out in large quantities, filling earlier orders, and this keeps the wholesale houses busy. Sporting goods continue in active demand, particularly arms and ammunition. Booking for Winter lines, such as skates, sleigh bells, etc., is not heavy. Most dealers still have a fair supply of these goods on hand from last Winter.

AXES AND HANDLES—Trade continues normal, with no price changes.

CUTLERY AND SILVERWARE — The demand for Fall goods is picking up and sorting orders are fair.

SPORTING GOODS—Lawn bowling and cricket goods are selling well. Fishing tackle is a live line and ammunition is commencing to liven up.

SCREEN DOORS AND WINDOWS—Trade is slackening off, but green wire cloth is still selling well. There is some talk of a scarcity but one is not considered likely.

HAMMOCKS—The hot weather has created a large sale of these goods. A better class of hammock than usual is being asked for, and manufacturers are kept busy getting out stock.

LAWN MOWERS AND HOSE — De-

mand is decreasing, but considerable sorting is reported.

REFRIGERATORS AND FREEZERS—A falling off is noticed in the demand.

WASHING MACHINES—A normal demand is noted.

CHAIN—We quote as follows: 1 inch, $6.60; 5-6 inch, $4.55; 3-8 inch, $3.95; 7-16 inch, $3.80; 1-2 inch, $3.65; 9-16 inch, $3.55; 5-8 inch, $3.45; 3-4 inch, $3.35.

EXTENSION AND STEP LADDERS—Prices continue as follows: Step ladders at 10c. per foot for 3 to 6 feet, and 11c. per foot for 7 to 10 feet ladders. Waggoner extension ladders, 40 per cent.

POULTRY NETTING—Sales are reported large. We quote: 2-in. mesh, 19 w.g., discount 55 and 5 per cent. All others 50 per cent.

GALVANIZED WIRE—We quote: $2.17 1-2 f.o.b. Cleveland.

BARB WIRE—Prices remain the same. We quote: On gauge 9, $2.40; guage 12, $2.55; gauge 13, $2.65; f.o.b. Toronto.

OILED AND ANNEALED WIRE—(Canadian)—Gauge 10, $2.31; gauge 11, $2.37; gauge 12, $2.45 per 100 lbs.

WIRE NAILS—The open market continues, with prices unsettled, but we nominally quote: $2.05 base.

CUT NAILS—We quote: $2.20 base, f.o.b. Montreal. Toronto, 20c. higher.

HORSENAILS—"C" brand, 40, 10 and 7 1-2 off list. "M.R.M." brand, 55 per cent. off. "Monarch" brand, 50 and 7 1-2 off. "Peerless," 50 per cent. off.

HORSESHOES—Our quotations continue as follows: P.B. base, $3.65; "M.R.M. Co., latest improved pattern" iron shoes, light and medium pattern, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; snow, No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $4.15; No. 1 and smaller, $4.40; featherweight, all sizes, 0 to 4, $5.75; toeweight, all sizes 1 to 4, $7. Packing, up to three sizes in a keg, 10c. per 100 lbs. extra; more than three sizes in a keg, 25c. per 100 lbs. extra.

RIVETS AND BURRS—Tinned rivets have been advanced and are now quoted net extra 4 cents per lb.

SCREWS—We quote: On gimlet point 70 and 5 per cent. off; on cone point, 70 and 10 per cent. off list.

BOLTS AND NUTS—Stocks are bare and manufacturers are refusing to accept orders. We quote: 55 and 10 per cent. off list.

CEMENT—We quote: For carload orders, f.o.b. Toronto, Canadian Portland, $1.95. For smaller orders ex warehouse, Canadian Portland, $2.05 upwards.

FIREBRICK—English and Scotch fire brick, 27c. to 30c.; American low-grade, 23c. to 25c.; high-grade, 27 1-2c. to 35c.

Canadian Metal Markets.

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, July 27, 1906.

The demand for metals is keeping up with remarkable persistence, in the face of very hot weather. Even the uncertain state of the market in many lines has not kept buyers off, and the metal merchants in Montreal have been kept busy filling orders.

Ingot tin is again varying, new prices being made nearly every day. But the general tendency of the market for some weeks past has been downward, and prices have now reached a level below that which preceded the sensational advances of three months ago. It looks as if the present unsettled condition of the market would remain for some time to come.

Pig lead has once more declined, and is up and down alternately. The demand is quite active, but market manipulation seems to have pulled quotations down.

Antimony went lower early in the week but is now firming up again. The New York metal reports state that dealers there who are closely in touch with market conditions are prophesying that antimony will now advance to or about the high water price which ruled a short time ago.

Zinc spelter is still weaker and a further drop of a quarter cent has taken place. Even the European brands which did not follow the first slight decline mentioned last week, are now being quoted lower. In consequence of this situation, sheet zinc has also declined 25 cents per hundred pounds.

COPPER—The situation is unchanged, and the turn-over of local dealers is brisk. We quote: Ingot copper, 21c. to 21½c.; sheet copper, base sizes, 25c.

INGOT TIN—The market is still sagging gradually, with spasmodic movements upward breaking the monotony. We are this week quoting a distinct decline over last week's prices, ruling quotations now being 41½c. to 42c. per pound.

ZINC SPELTER — Contrary to expectations, another drop has occurred, and the decline has become general. This is inexplicable on natural grounds, as there is a particularly fine demand for spelter. We are now quoting: $6.75 to $7 per hundred pounds.

ANTIMONY—Though we give a lower price than at our last report, the market is now said to be recovering. We quote 27c. per pound.

PIG LEAD — Another decline has brought the price back to $4.30 to $4.40.

PIG IRON—Bookings at present are quiet. We quote:

"Dom.," No. 1.	$19.50 to $20.00	delivered	Montreal
Usual difference in price for lower grades.			
Ferrona No. 1	$19 50	delivered	Montreal
" No. 2	19 00	"	"
" No. 3	18 50	"	"
" No. 4	18.00	"	"
Londonderry	20.50	"	"
Carron No. 1	22.00	"	"
" (special)	21.00	"	"
Summerlee No. 1	22.00	"	"
" No. 3 (soft)	21 00	"	"
Clarence No. 1	18.50	"	"
" No. 3	18.00	"	"
Cleveland No. 1	18.25	"	"

BOILER TUBES—We quote: British and American tubes, 1½ inch, 8½c.; 2 inch, 8½c.; 2½ inch, 10c.; 3 inch, 12c.; 3½ inch, 15¾c.; 4 inch, 20c.; 5 inch, 45c. Price per foot net.

TOOL STEEL—Our prices are unchanged: Colonial Black Diamond, 8c. to 9c.; Sanderson's 8c. to 45c., according to grade; Jessop's, 13c.; Jonas & Colver's, 10c. to 20c.; "Air Hardening," 65c. per pound; Conqueror, 7½c.; Conqueror High Speed Steel, 60c.; Jowitt's Diamond J., 6¼c. to 7c.; Jowitt's Best, 11c. to 11½c.

MERCHANT STEEL—Trade is good in nearly all lines. Prices remain as follows: Sleigh shoe, $2.17½; tire, $2.27½; spring, $2.75; toecalk, $2.82½; machinery iron finish, $2.27½; ruled machinery steel, $2.75; mild, $2.17½ and upwards; square harrow teeth, $2.27½. Net cash 30 days. Rivet steel quoted on application.

COLD ROLLED SHAFTING—We are still quoting: 3-16 inch to 1-4 inch, $6.80; 5-16 inch to 11-32 inch, $5.78; 3-8 inch to 17-32 inch, $4.76; 9-16 inch to 47-64 inch, $4.08; 3 1-8 inch to 3 7-16 inch, $3.60; 3-4 inch to 1 7-16 inch, $3.75; 1 1-2 inch to 3 inch, $3.50; 3 1-2 inch to 3 15-16 inch, $3.75; 4 inch to 4 7-16 inch, $4.08; 4 1-2 inch to 4 11-16 inch, $4.42.

GALVANIZED IRON—A brisk demand is still shown and prices are very steady. We quote as follows: Queen's Head, 28 gauge, $4.35 to $4.60; 26 gauge, $4.20; 22 to 24 gauge, $3.65; 16 to 20 gauge, $3.50; Apollo, 28 gauge, $4.25 to $4.50; 26 gauge, $4.10; 22 and 24 gauge, $3.55; 16 to 20 gauge, $3.40; Comet, 28 gauge, $4.25 to $4.50; 26 gauge, $4.10; 22 and 24 gauge, $3.55; 16 to 20 gauge, $3.40; Bell brand, 28 gauge, $4.40 to $4.45; Fleur-de-Lis, 28 gauge, $4.20 to $4.45; 26 gauge, $4.05; 22 and 24 gauge, $3.50; 16 to 20 gauge, $3.35; Gorbal's "Best Best," 28 gauge, $4.20 to $4.45; "Windmill Best," 28 gauge, $4.15; Sword and Torch, 28 gauge, $4.15; Colborne Crown, 28 gauge, $4.20 to $4.45. In less than case lots 25c. extra.

BLACK SHEETS—The market is very firm. We quote: 28 gauge, $2.40; 26 gauge, $2.35; 22-24 gauge, $2.30; 19-20 gauge, $2.30; 8-10 gauge, $2.15.

CANADA PLATES—Good business is being done and the following prices are steady: 52's, $2.60; 60's, $2.65; 75's, $2.75; full polished, $3.75 to $4; galvanized, 52's, $4.10; 60's, $4.35.

TINPLATES—We quote as follows:

Cokes, base size, 1C 14x20, $4 ; charcoal, base size, 1C, 14x20, $4.25.

TERNE PLATES—We are still quoting $6.85.

SHEET ZINC—In consequence of a declining spelter market, sheets are somewhat easier, and we now quote : $7.75 in casks, $8 in less than casks.

SHEET LEAD—Our quotations are : 2½ lbs., 5½c. by the roll ; 3 lbs. and heavier, 5¼c. by the roll ; small quantities, 25c. per hundred lbs. extra.

BAR IRON—Business is fair, and the price remains steady at $2.05 base f.o.b. Montreal.

OLD MATERIAL—The situation is substantially the same as at our last report. We still quote : Light copper, 14½c. ; heavy red brass, 14½c. ; yellow brass, 11½c. ; light brass, 7½c. ; lead, 3¼c. ; zinc, 4c. ; machinery cast scrap, $13 ; wrought scrap, $12 ; stove plate scrap, $10.50 to $11 ; mixed rags, $1 to $1.20 per 100 lbs. ; old rubbers, 7½c.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, July 27, 1906.

The metal market is featureless, and trade is generally quieter. Ingot tin is more active, but the movement has not been marked either way and present quotations are pretty well held. More business is being done in tin plates, but prices remain the same. Galvanized sheets are quiet with light stocks. Copper is unchanged and for a month or two trade will no doubt be quiet. Producers are sold up to October and consumers are bought up to that month, so that little new business is in view, with the exception of small lots which are moving more freely. Lead is firm and active but unchanged. Iron conditions are unchanged. Scrap wrought iron is 50 cents higher.

PIG IRON—Trade is quiet with prices the same. We quote as follows : Radnor at furnace, $30 ; Hamilton at furnaces, No. 1, $20.50 ; No. 2, $20 ; Londonderry, f.o.b., Toronto, No. 1, $21.50, No. 2, $21 ; Middleborough, $21.50.

BAR IRON—There is only a fair demand for bar iron and the stocks are light. We quote : $2.15 base, f.o.b. Toronto, with discount of 2 per cent. net cash.

INGOT TIN—There has been a continued fluctuation on the market, but prices remain unchanged. Quotations are 41c. and 42c. per pound.

TIN PLATES—More trade is being done. We quote as follows : Cokes, base size, 14x20, $4 ; charcoal, base size, 14x20, $4.50.

GALVANIZED SHEETS—Prices are well maintained and demand is active. We quote : 16 to 20 gauge, $3.45 up.

BRASS—The market continues firm with no price changes. Buying is active and quotations 23c. to 24c. per pound.

COPPER—Market is quiet ; prices remain unchanged. Our quotations are as follows : Ingot copper, $20 per 100 lbs., and sheet copper, $25 per 100 lbs.

LEAD—Market is becoming firmer, but local dealers are still quoting $4.40 for imported pig, and $5 per 100 lbs. for bar lead.

ZINC SPELTER—The market is quiet and prices remain unchanged. We quote : 7¼c. per lb. for foreign and 5¾c. to 6c. per lb. for domestic.

BOILER PLATES AND TUBES — A lively demand is experienced from threshers. Our quotations are as follows : Plates, per 100 lbs., $2.35 ; heads, per 100 lbs., $2.60 ; tank plates, 3-16 inch, $2.45 ; tubes, per 100 feet, 1½ inch, $8.50 ; 2, $8.80 ; 2½, $10.75 ; 3, $12 ; 3½, $15.80 ; 4, $20. Terms, 2 per cent. off.

ANTIMONY — Prices are unchanged and 27c. is quoted.

OLD MATERIAL — Dealers' buying prices are as follows : Heavy copper and wire, 15c. per lb. ; light copper, 13½c. per lb. ; heavy red brass, 13c. per lb. ; heavy yellow brass, 11c. per lb. ; light brass, 8¼c. per lb. ; tea lead, $3.25 per 100 lbs. ; heavy lead, $3.50 per 100 lbs. ; scrap zinc, 4½c. per lb. ; iron, No. 1 wrought, $11 to $11.50 ; No. 2 wrought, $3 to $5 ; machinery cast scrap, $13.50 to $14 ; stove plate, $10 ; malleable and steel, $5 ; old rubbers, 7¾c. per lb. ; country mixed rags, $1 to $1.25 per 100 lbs., according to quality.

COAL—The usual monthly advance of 10c. has been made, the figures now being : Anthracite in cars at bridges, egg, stove and nut, $5.30 ; grate, $5.05 ; pea $3.60, per gross ton.

Standard Hocking, soft coal, in cars, f.o.b. at mines : Lump, $1.50 ; ¾ inch, $1.40 ; run of mine, $1.30 ; nut, $1.25 ; N. P. and S., $1 ; slack, 75c. ; box cars, 10c. per ton additional.

Youghiogheny soft coal in cars, bonded at bridges : 1¼ inch, $2.50 ; ¾ inch, $2.40 ; mine run, $2.30 ; slack, $2.05.

For Manitoba, British Columbia and Maritime Provinces markets see pages following.

UNITED STATES METAL MARKETS.

From the Iron Trade Review, Cleveland, July 26, 1906.

Additional evidence that the present prosperity in the iron and steel market will continue through the present year and at least well into 1907 continues to accumulate. Already some inquiry for 1907 iron has developed and ore buyers are manifesting an anxiety about their supplies which will doubtless result in an early buying movement. Little rail tonnage is available for 1906 and contracting for 1907 delivery continues heavy, orders for about 53,000 tons of standard sections having been let during the week. That the ore traffic of next year will exceed that of the present record season is indicated my the placing of orders within the last few days for nine freighters, which will add about 1,750,000 tons to the lake vessel capacity for 1907.

The pig iron market has so far escaped the usual mid-summer period of dullness and is manifesting increased strength with a tendency toward advanced prices. The leading harvester interest has purchased 25,000 tons of southern iron at about $13, Birmingham, which is considerably below the usual quotation. Practically no Bessemer or basic iron can be had for the remainder of the year, and in the valley all grades have advanced from 25 to 50 cents. Southern and Virginia furnaces are profitting by the high prices of the north.

The crude steel scarcity continues unabated, and the situation has grown worse through the announcement that Pittsburg interest, which are usually sellers of billets are out of the market on account of needing their product for their own mills. Outside interests are being called upon to relieve the Pittsburg shortage.

The market for sheet and plates has received a considerable impetus through the covering of requirements of lake shipbuilding concerns, about 35,000 tons being needed for vessels recently ordered. This tonnage has been divided among the Illinois Steel Co., Carnegie Steel Co., Jones & Laughlin Steel Co. and the Lackawanna Steel Co. The demand for structural material is heavy for bridge purposes, and for the erection of new industrial plants.

An order has been placed for 65 miles of steel line pipe and 19 miles of iron pipe for use in Indian Territory. Numerous smaller sales are reported with heavy business in prospect.

LONDON METAL MARKETS.

From Metal Market Report, July 25, 1906.

PIG IRON—Cleveland warrants are quoted at 51s. 3d., and Glasgow standard warrants at 50s., making prices as compared with last week 8½d. higher for Cleveland warrants and 1d. lower for standard warrants.

TIN—Spot tin opened steady at £171 5s., futures at £170 10s., and after sales of 300 tons of spot and 200 tons of futures, closed easy at £170 5s. for spot, £169 15s. for futures, making price compared with last week £3 12s. 6d. higher on spot, and £3 4s. 6d. higher on futures.

COPPER—Spot copper opened quiet at £81 10s., futures £80 17s. 6d., and after sales of 400 tons of spot and 200 tons of futures, closed strong at £82 10s. for spot, and £81 5s. for futures, making price as compared with last week £2 2s. 6d. higher on spot and £1 7s. 6d. higher on futures.

LEAD—The market closed at £16 15s. making price as compared with last week the same.

SPELTER—The market closed at £27 making price as compared with last week 5s. higher.

U. S. IRON AND METAL TRADES.

From the Iron Age, July 19, 1906.

Interest has centred in the past week in the remarkable business taken by the lake shipyards. Orders were placed for 11 boats for delivery at the opening of the navigation season in 1907, these including four 12,000-ton vessels for the United States Steel Corporation. In all 27 new boats have now been ordered for 1907 and the total on the books of the lake shipbuilders is 49. This means an addition of 9,000,000 to 10,000,000 tons a season to the carrying capacity of the Great Lakes. The danger repeatedly urged in the present campaign of vessel building, of an over-supply of lake ton-

nage, seems to have no terrors for large ore consuming interests.

That midsummer buying of unprecedented proportions is in progress is indicated by the fact that the United States Steel Corporation has booked a distinctly larger average tonnage this month than in July, 1905, and that the daily average for this year thus far is much in excess of the daily average up to July 25, 1905. The orders are distributed through all lines in both light and heavy material.

The pig iron markets show an advancing tendency, and in the past week activity has been marked in foundry grades in the west and in basic iron in the east. The leading harvester machinery interest bought 25,000 tons of southern iron to complete its requirements for the second half of the year. Following this transaction one important southern seller withdrew from the market and other interests are now quite uniformly holding to the basis of $13.50, Birmingham. Lower grades of southern iron have sold below this basis. On the buying of 40,000 tons of basic iron in Eastern Pennsylvania the price for spot delivery advanced 25 cents. A round sale was made of eastern basic for delivery at Buffalo in the first half of 1907. One important foundry iron seller in the Chicago district is out of the market for the rest of the year.

Besides the business taken by plate and structural mills for the new lake boats, the week has seen the beginning of important contracts from steel car works. Bridges and buildings continue to be abundant sources of tonnage. Two St. Louis contracts, one a warehouse and the other an office building, call for 9,400 tons. Pittsburg reports 6,000 tons of bridge work let, and a Cleveland tributary of the Lake Shore road has placed 9,000 tons of bridge work.

Rail orders include 17,000 tons for the Reading road for 1906 delivery, and for 1907, 40,000 to 50,000 tons was booked. Foreign rail orders amount to 20,000 to 25,000 tons for shipment to Japan, Yucatan, Cuba and South America.

The leading wrought pipe interest has booked the largest July business in its history, and the month even promises to establish a new record. Pipe line work, domestic and foreign, is heavy.

Western sales of steel bars, reported through Chicago, amount to 50,000 tons since July 1, and bar iron is more active in that market.

In wire and wire products, for a month ordinarily light, the activity of July has been surprising.

The situation in steel, particularly open hearth, is more acute. A 5,000-ton sale of open hearth billets is reported in the east, for shipment to Pittsburg.

British Columbia Trade News

Vancouver, B.C., July 21, 1906.

R. G. Macpherson, M.P., is authority for the statement that in two years there will be two railways under construction connecting with North Vancouver. The ambitious embryo city on the north shore of Burrard Inlet, Vancouver's famous harbor, is reaching the stage where railway development would create a very considerable boom. The townsite has all been blocked out, streets cleared, graded, and in some cases having a macadamized surface. The situation is even better than that of Vancouver for a city, a sunny southern slope giving a splendid aspect as well as a favorable location for taking advantage of weather. There are perhaps 5,000 people living in North Vancouver now, and while most of them are directly or indirectly interested in the City of Vancouver, their efforts and energies would be transferred if a railway were built on the north shore of the Inlet.

* * *

A million dollars is the estimated amount of money to be expended in building some 75 miles of electric railway in the Fraser Valley on the south side of the river, extending from New Westminster to Chilliwack. It has been discussed for some years, and now J. Buntzen, managing director of the British Columbia Electric Railway Co., makes the announcement that he will advise his company to enter into the proposition. A conference between the reeves and other officers of the rural districts affected and Mr. Buntzen resulted in his statement that he would take the matter up with the company on his return to London. The B. C. Electric Railway Co. is practically the owner of the Vancouver Power Co., which supplies all the electric energy consumed by the lighting, power and street car lines of Vancouver and New Westminster. The plant at Lake Beautiful is capable of developing many times more power than at present used. The proposed electric line will serve districts already partially settled and will also tend to develop a large area of lands suited to agriculture but not yet occupied or improved.

* * *

Lumber prices have not advanced recently, but shingles have been put up another ten cents per thousand, making them now $2.05 f.o.b. The demand has been so great that a bonus of 5 and 10 cents has been paid by some customers for some time, in order to secure attention to their orders.

The rush in the lumber trade keeps up, and many mills will not get in sight of their orders this season. Not before September is the answer of some operators when asked if they can accept orders for delivery. It is apparently the innings of the lumberman. Many predict that prices will not be maintained at present rates, but it is difficult to see how lower figures will be quoted. The mills are all working up to the limit of their capacity and then not beginning to cope with the orders placed, so that there is little inducement for any one to begin price cutting. The chances are that next season will show even greater demand than this year.

Building in Vancouver, as far as the frame residence class of structure is concerned, has certainly been held up this season by the very high prices for materials. Many blocks are under construction, but nearly all are of brick or stone and some cement block and concrete structures have been put up. But the cement stocks in the city are all cleaned up at the present moment and await fresh supplies. At the beginning of the present week even the city corporation work on cement sidewalks was held up for the want of material, Vancouver is happily situated for its cement supply, as there is a fine local factory, owned by R. P. Butchart, of the Shallow Lake, Ont., plant, which is located near the City of Victoria on Vancouver Island. Besides there are large importations made from the Old Country by sailing ship and steamer, and Japanese cement is also used to a large extent. The shortage is seriously affecting some contractors, almost as much as the lumber scarcity.

* * *

The Atlin mining camp is not very much heard of this year, yet results there every season continue to be most satisfactory. Some of the big dredges are not quite adapted to the coarse gravel found in the ground they have been working, but otherwise dredging is getting ahead there as in the Klondike. The Societe Miniere on Boulder Creek, the Hamshaws on McKee, and J. M. Ruffner's company on Pine all report good returns.

The finding of large deposits of bituminous coal on Tooya Creek, between Atlin and Telegraph Creek, has created a great deal of interest, as the find is of large area and good quality, as well as being located in convenient position. Seams 34 and 26 feet respectively have been discovered.

* * *

That the importance of mining to the commercial interests of the coast cities is not understood by the average even among commercial men, is the opinion of a gentleman in Vancouver long prominently connected with the mining industry. He ventures the expression that if it were not for the mining in the Kootenays and in the north, there would not be much doing in wholesale circles in Vancouver. He expresses the view also that the next big development will be in coast mining, and estimates the results from the Britannia mine, the largest now operating on the coast, which he estimates is worth $1,500 per day to the City of Vancouver alone. There are a number of other properties now shipping and in the near future some large expenditures are to be made to develop other properties in the vicinity of Vancouver. The mines further up the coast are also receiving attention and coming more into the shipping list. The interesting prediction is made by this optimistic mining man that Vancouver will be the biggest mining centre in the west in five years.

NEW FOUNDRY AT GLACE BAY.

It is said that the iron and brass foundry recently completed by the Dominion Coal Co. at Glace Bay, while not possessing any unusual features, is an example of the high class of construction work carried on by the company. The building is of the most modern fireproof construction, with steel frames and brick walls. Ample storage space is provided outside the foundry. A very complete industrial railway has been installed for bringing the various materials into the foundry, and removing the castings. Special attention has been given to the proper lighting and ventilation of the building. As regards the general design and equipment of the foundry, for its size it compares favorably with the best in the country, and reflects great credit on the Dominion Coal Company's superintendent, who has had complete charge of the carrying out of the work. It will employ thirty men at the start.

Hardware and Metal Conditions in Manitoba

(Market quotations corrected by telegraph up to 12 a.m. Friday, July 27, 1906.)

Office of HARDWARE AND METAL,
Room 511, Union Bank Building,
Winnipeg, Man.

Exhibition week and the convention of the Western Retail Hardware Association have combined to bring a large number of hardwaremen to the city and wholesale houses have been correspondingly busy. As the result of long continued cutting in bar iron prices quotations are now 20 cents per cwt. lower. Other quotations are unchanged.

GREEN WIRE CLOTH—Quoted at $1.55 per 100 square feet.

LANTERNS—Prices are quoted as follows: Cold blast, $5.25; coppered cold blast, $7.25; cold blast dash, $7.75; lift, $4.25 per doz.

WIRE — We quote as follows: Barbed wire, 100 lbs., $2.90; plain galvanized, 6 to 8, $3.39; 10, $3.50; 12, $3.10; 13, $3.20; 14, $3.90; 15, $4.45; 16, $4.60; plain twist, $3; staples, $3.50; oiled annealed wire, 10, $2.96; 11, $3.02; 12, $3.10; 13, $3.20; 14, $3.30; 15, $3.45. Annealed wires (unoiled) 10c. less.

HORSESHOES — Quotations are as follows: Iron, No. 0 to No. 1, $4.65; No. 2 and larger, $4.40; snowshoes, No. 0 to No. 1, $4.90; No. 2 and larger, $4.65; steel, No. 0 to No. 1, $5; No. 2 and larger, $4.75.

HORSENAILS — Lists and discounts are quoted as follows: No. 10, 20c.; No. 9, 22c.; No. 8, 24c.; No. 7, 26c.; No. 6, 28c.; No. 5, 32c.; No. 4, 40c., per pound. Discounts are quoted as follows: "C" brand, 40, 10 and 7½ per cent., "M" brand and other brands, 55 and 60 per cent. Add 15c. per box.

WIRE NAILS—Steady at $2.60 per keg.

CUT NAILS—Quoted now at $2.70 per keg.

PRESSED SPIKES—Prices are as follows: ¼ x 5 and 6, $4.60; 5-6 x 5, 6 and 7, $4.25; ⅜ x 6, 7 and 8, $4.10; 7-16 x 7 and 9, $4.00; ½ x 8, 9, 10 and 12, $3.90; ⅝ x 10 and 12, $3.75.

SCREWS—Discounts are as follows: Flat head, iron, bright, 85 and 10 p.c.; round head, iron, 80 p.c.; flat head, brass, 75 and 10 p.c.; round head, brass, 70 and 10 p.c.; coach, 70 p.c.

NUTS AND BOLTS — Discounts are unchanged and continue as follows: Bolts, carriage, ⅜ or smaller, 60 and 5; bolts, carriage, 7-16 and up, 55; bolts, machine, ⅜ and under, 55 and 5; bolts, machine, 7-16 and over, 55; bolts, tire, 65; bolt ends, 55; sleigh shoe bolts, 65 and 10; machine screws, 70; plough bolts, 55; square nuts, case lots, 3; square nuts, small lots, 2½, hex nuts, case lots, 3; hex nuts, smaller lots, 2½ p.c.

RIVETS—Quoted now as follows: Iron, 60 and 10; copper, No. 8, 34½; copper, No. 12, 40 p.c.

COIL CHAIN — Unchanged in price. We quote: 3-16 inch, $9.25; 5-16, $5.20; 7-16, $4.45; ½, $4.10; ¼, $7.20; ⅝, $4.60; ½, $4.30; ¾, $4.

SHOVELS—Discounts on spades and shovels continue 40 and 5 p.c.

HARVEST TOOLS — Discounts continue 60 and 5 p.c.

AXE HANDLES—Quoted as follows: Turned, s.g. hickory, doz., $3.15; No. 1, $1.90; No. 2, $1.60; octagon, extra, $2.30; No. 1, $1.60.

AXES—Prices quoted as follows: Bench axes, 40; broad axes, 25 p.c. discount off list; Royal Oak, per doz., $6.25; Maple Leaf, $8.25; Model, $8.50; Black Prince, $7.25; Black Diamond, $9.25; Standard flint edge, $8.75; Copper King, $9.00; Columbian, $10.75; handled axes, North Star, $7.75; Black Prince, $9.25; Standard flint edge, $10.50; Copper King, $11 per doz.

BUTTS — The discount on wrought iron butts if 70 p.c.

CHURNS— The discounts from list continue as before: 45 and 5 per cent.; but the list has been advanced and is now as follows: No. 0, $9; No. 1, $9; No. 2, $10; No. 3, $11; No. 4, $13; No. 5, $16.

CHISELS—Quoted at 70 p.c. off list prices.

AUGER BITS—Discount on "Irwin" bits is 47 1-2 per cent., and on other lines 70 per cent.

BLOCKS—Discount on steel blocks is 35 p.c. off list prices; on wood, 55 p.c.

FITTINGS — Discounts continue as follows: Wrought couplings, 60; nipples, 65 and 10; T's and elbows, 10; malleable bushings, 50; malleable unions, 55 p.c.

GRINDSTONES — The price is now 1¾c. per lb.

FORK HANDLES — The discount is 40 p.c. from list prices.

HINGES—The discount on light "T" and strap hinges is 65 p.c. off list prices.

HOOKS — Prices are quoted as follows: Brush hooks, heavy, per doz., $8.75; grass hooks, $1.70.

STOVE PIPES—Quotations are as follows: 6-inch, per 100 feet length, $8.50; 7-inch, $9.25.

DRAW KNIVES—The discount is 70 per cent. from list prices.

RULES—Discount is 50 per cent.

WASHERS—On small quantities the discount is 35 p.c.; on full boxes it is 40 p.c.

WRINGERS—Quotations are: Royal Canadian, $33; B.B., $37.75 per doz.

FILES—Discounts are quoted as follows: Arcade, 75; Black Diamond, 60; Nicholson's, 62½ p.c.

BUILDING PAPER — Prices are as follows: Plain, Joliette, 40c.; Cyclone, 55c.; Anchor, 55c.; pure fibre, 60c.; tarred, Joliette, 65c.; Cyclone, 80c.; Anchor, 65c.; pure fibre, 80c.

TINWARE, ETC. — Quoted as follows: Pressed, retinned, 70 and 10; pressed, plain, 75 and 2½; pieced, 30; japanned ware, 37½; enamelled ware, Famous, 50; Imperial, 50 and 10; Imperial, one coat, 60; Premier, 50; Colonial, 50 and 10; Royal, 60; Victoria, 45; white, 45; Diamond, 50; Granite, 60 p.c.

CORDAGE—Quotations are as follows: Rope, sisal, 7-16 and larger, basis, $11.25; Manila, 7-16 and larger, basis, $15.75; Lathyarn, $11.25; cotton rope, per lb., 21c.

SOLDER—Quoted at 27c. per pound. Block tin is quoted at 45c. per pound.

VISES — Prices are quoted as follows: "Peter Wright," 30 to 34 14½c.; 35 to 39, 14c.; 48 and larger, 13½c. per lb.

ANVILS—"Peter Wright" anvils are selling at 11c. per lb.

CROWBARS—Quoted now at 4c per lb.

POWER HORSE CLIPPERS — The "1902" power horse clipper is selling at $12, and the "Twentieth Century" at $6.00. The "1904" sheep shearing machines are sold at $13.60.

AMMUNITION, ETC.—As noted last week, shot has been advanced 25 cents per 100 lbs. We quote prices as follows: Cartridges, Dominion R. F., 50 and 5; Dominion, C.F., pistol, 30; military, 20; American R.F., 33⅓; C.F., pistol, 5 p.c.; C.F., military, 10 p.c. advance. Loaded shells: Dominion Eley's and Kynoch's soft, 12 gauge, black, $16.50; chilled, 12 gauge, $17.50; soft, 10 gauge, $19.50; chilled, 10 gauge, $20.50. Shot, ordinary, per 100 lbs., $7.25; chilled, $7.75; powder, F.F., keg, Hamilton, $4.75; F.F.G., Dupont's, $5.00.

IRON AND STEEL—As the result of continued cutting, bar iron has been reduced to 20 cents per cwt. Quotations now are as follows: Bar iron (basis), $2.50; Swedish iron (basis), $4.75; sleigh shoe steel, $2.75; spring steel, $3.25; machinery steel, $3.50; tool steel, Black Diamond, 100 lbs., $9.50; Jesson, $13.00.

SHEET ZINC — The price is now $8.50 for cask lots, and $9.00 for broken lots.

PIG LEAD—The pig lead market is still reported very firm and local prices are maintained steadily. The price is $5.25 per cwt. with a reduction of 25c. per 100 lbs. on ton orders.

AXLE GREASE—"Mica" axle grease has been advanced to $2.75 per case and "Diamond" to $1.60.

BLACK IRON PIPE—Quotations are: ¼ inch, $2.45; ⅜, $2.85; ½, $3.15; ¾, $4; 1, $5.75; 1¼, $7.85; 1½, $9.40; 2, $12.90.

GALVANIZED IRON — Quotations are: Apollo, 16 gauge, $3.90; 18 and 20, $4.10; 22 and 24, $4.45; 26, $4.40; 28, $4.65; 30 gauge or 10¾ oz., $4.95; Queen's Head, 24, $4.65; 26, $4.65; 28, $4.90.

TIN PLATES—We now quote as follows: IC charcoal, 20 x 28, box, $9.50; IX charcoal, 20 x 28, $11.50; XXI charcoal, 20 x 28, $13.50.

TERNE PLATES—Quoted at $9.00.

CANADA PLATES—Prices have been steady since the recent decline. We quote: Canada plate, 18 x 21, 18 x 24, $3.15; 20 x 28, $3.40; full polished, $3.90.

BLACK SHEETS—Prices are: 10 to 16 gauge, 100 lbs., $3.50; 18 to 22, $3.75; 24, $3.90; 26, $4.00; 28, $4.10.

PETROLEUM AND GASOLINE — Prices are quoted as follows: Silver Star, per gal., 21c.; Sunlight, 22c.; Eocene, 24c.; Pennoline, 25c.; Crystal Spray, 24c.; Silver Light, 22c.; gaso-

line, 70-72 (engine), 25½c., in barrels f.o.b. Winnipeg.

PAINTS, OILS AND TURPENTINE —Prices are now quoted as follows: White lead, pure, $7; bladder putty, in bbls., 2½cf; in kegs, 3¾c.; turpentine, pure, in barrels, 97c.; less than barrel lots, 92c.; linseed oil, raw, 64c.; boiled, 67c.

WINDOW GLASS — We quote: 16-oz. O.G., single, in 50-ft. boxes—16 to 25 united inches, $2.25; 26 to 40, $2.40. 16-oz. O.G., single, in 100-ft. cases — 16 to 25 united inches, $4.00; 26 to 40, $4.52; 41 to 50, $4.75; 51 to 60, $5.25; 61 to 70, $5.75. 21-oz. C.S., double, in 100-ft. cases—26 to 40 united inches, $7.35; 41 to 50, $8.40; 51 to 60, $9.45; 61 to 70, $10.50; 71 to 80, $11.55; 81 to 85, $12.60; 86 to 90, $14.75; 91 to 95, $17.30.

Nova Scotia Trade News.

Halifax, N.S., July 25, 1906.

Mid-summer dullness in the hardware trade continues. Prices are firm throughout the list with the exception of turpentine, which has dropped five cents per gallon. It is now quoted here at 95c. for casks. Jobbers say that there has been an advance in carriage bolts, but the change has not gone into effect here as yet. The linseed oil market is easier, but it is still selling at 60c. White lead is firm at $6.50 for Canadian and $7.50 for Brandrams.

The new shaft at the Emery seam at Reserve, C.B., is now about completed. The seam was struck last week at about 140 feet from the surface. The work of sinking the new shaft was begun three months ago. The new Walker air compressor, installed at Reserve, was put into operation this week. It is running very satisfactorily and will be a valuable adjunct to the mining work at this colliery. The water shaft being sunk between Bridgeport and New Aberdeen is now down 140 feet. It is being put down at the rate of four feet a day.

According to advices from Newfoundland the great success which has attended the development of properties held by the Goldenville Mining Co., Limited, at Ming's Bight, seem to promise a boom in gold mining in the colony. From the results so far attained it is believed that the peninsula of Ming's Bight is a rich gold bearing country and in a short time a great industry may spring up. It is understood that Messrs. McIntyre, McLoughlin and others have assigned the claims held by them at Ming's Bight and Baie Verte to the Northern Mining Co., Limited, and that work will commence in these mines immediately. The Northern Mining Co., Limited, is a local company with a capital of $100,000, and was formed for the purpose of taking over these properties and developing them. The capital is divided into shares of $5 each.

The annual meeting of the Maritime Electrical Association was held at Sydney last week, when many interesting papers were read by Prof. Alexander Graham Bell, Prof. Dahl and other experts on electricity.

The following are the officers for 1906:

President P. R. Colpitt, city electrician, Halifax, N. S.; vice-president, F. A. Bowman, manager the Eastern Telephone Co., Limited, Sydney; secretary-treasurer, T. N. Goudge, sec.-treas. of the N. B. Telephone Co., Limited, Halifax; executive committee, C. E. Brown, superintendent Yarmouth A. Telephone Co., Yarmouth, N.S.; S. G. Chambers, president Chambers Electric Co., Truro, N.S.; C. W. Fairweather, Moncton, N.B.; P. Freeman, Halifax Electric Tramway Co.; J. A. Farquhar, of Farquhar Bros., electricians, Halifax, N.S.; C. W. McKee, manager of the Western Union Telegraph Co., Halifax, N.S.; E. L. Nash, manager Electric Light Co., Lunenburg, N.S.; A. F. Townsend, manager C. B. Electric Co., Sydney, C.B.; J. H. Winfield, general manager of the N. S. Telephone Co., Halifax, N.S.; C. E. Wadden, manager N. G. Electric Co., New Glasgow; W. A. Winfield, manager Telephone Co., P. E.I., Charlottetown, P.E.I.; W. W. Wells, superintendent N. B. Telephone Co., St. John, N.B.

On Friday evening a big banquet was held at the Sydney Hotel.

It is possible to conduct a hardware business on a cash basis, but in most hardware stores more money could be made doing a conservative credit business if the merchant is a good collector.

To change from credit to cash, give the public notice through the press, post notices to that effect in place of business, in each case stating the date the change would be made, and if advisable give your reasons for making the change.

BUSINESS MANAGEMENT

Article IV—By Howard R. Wellington.

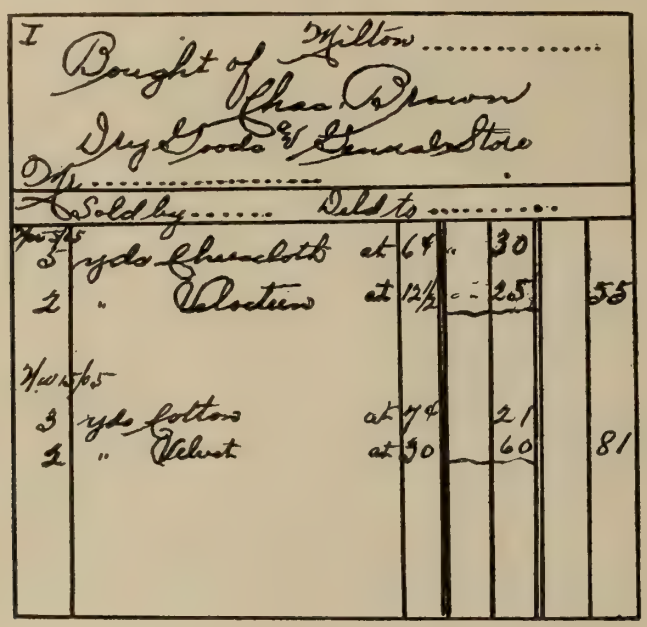
A RETAIL MERCHANTS' ACCOUNTS AND RECORDS.

Customers of retail stores nowadays usually require an itemized invoice or memorandum of the goods purchased in each transaction in addition to an itemized account monthly, thus differing from the wholesale and retail transactions, where an invoice is sent after the goods and then a statement giving dates of purchase and amounts only.

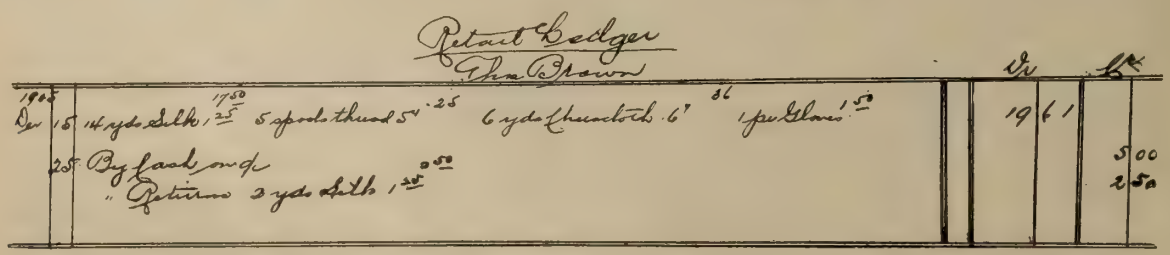
In order to oblige the customer of the retail store it is advisable to post to the ledger direct from the sales ticket the items in detail, which, in turn, are rendered monthly on statements.

The amounts paid on account and credit for returns may be posted in red ink to guard against the possibility of posting the debits in the credit column or the credits in the debit column.

In order that there may be no delay in sending out the statements on the first of each month, the statements may be commenced early in the month for the first of the next month and entered up as soon as the posting is done to the ledger, the ledger folio being placed at the top of the statement. If the ledger accounts are arranged alphabetically as much as possible, a few extra leaves being left open after each letter, the statements will run alphabetically and also according to account folio, making reference and additional posting much easier. If time permits, the balance on the statement may be compared with the corresponding balance in the ledger account, and any existing error detected at once.



There is a tendency among retail merchants in their desire to sell goods, to overlook, to some extent at least, the necessity of recording their daily transactions in such a way that their accounts may be rendered promptly and collections helped thereby. In order to save re-writing the full details of each sale in the ledger and posting again to the monthly statement, the following plan might work out to advantage in a small business, although attaching the triplicate bills mentioned might prove a little cumbersome where a large number of sales were made to any one customer.



The salesman taking the order should use a duplicate cash, sale or charge book, giving the customer the original copy, or, if the goods are delivered by a driver, send the original to the customer with the goods. The total amount of the sale may then be posted direct from the sale book to the customer's account in the ledger and the totals of the sale for the day, week, or month recapitulated from the same book, the grand total being posted to the credit of "Sales" account or "Merchandise" account, whichever account has been opened.

When rendering monthly statements to the customers, it should only be necessary to enter on statement the date and amount of purchase, as the customer has already the original bill of goods with which to check his statements.

The retail merchant does not demand from his wholesale house a statement of the goods in detail each month, and if the customer of the retail merchant preserves the original bill sent with the goods, an itemized account would be unnecessary. If, however, it was found that too many requests were being made for the complete statement of goods purchased during the month, a triplicate bill could be made by the salesman who originally took the order, and these bills would be filed alphabetically in the same order as the monthly statements until required at the end of each month.

Another method which was hinted at in a previous article is to use the duplicate cash sale and charge books, posting the charge sales direct to a statement-invoice form, which is inserted for this purpose opposite the ledger sheet in a loose leaf binder. This form is made in duplicate, the original being sent to the customer on the first of each month, the duplicate remaining in the ledger binder as a complete detailed record of each sale.

PITHY PARAGRAPHS.

Keep busy.

Don't half-do things.

Delays are dangerous.

Great thoughts hallow any labor.

The key to success is not the night key.

The sun shines for all—who get up early.

The self satisfied need to be short sighted.

Some men are too slow to get out of their own way.

The friend that does not help us higher is not worth having.

Let the faint hearted not be discouraged. Life is sweet and only the good die young.

SEARCHLIGHTS OF COMMERCE.

The modern commercial traveler—the diplomatic, unobtrusive, gentlemanly, keen, present day "knight of the road"—is, of his kind, a remarkably interesting example of "the survival of the fittest," for truly the great army of business getters now is peculiarly adapted to the requirements of twentieth century people and methods.

Had Mark Twain served time as a "drummer" he could easily write an equally interesting and intensely exciting and amusing companion book to "Old Times on the Mississippi," under the title of "Old Times on the Road." A book, and a goodly sized one, would undoubtedly be required to convey to the uninitiated any intelligent idea of the old-time traveler's personality and achievements. Ability to successfully absorb unlimited liquid refreshment, smoke continuous strings of brightly banded cigars, loudly retail "the latest" stories, play unlimited poker and clothe his anatomy in raiment likening unto Solomon in all his glory, very often constituted a prominent portion of his most essential qualifications. In his expense account items for "entertaining" and "sundries" predominated, and as long as he "got business" the amount of such expenditure was rarely questioned. His customers, established and prospective, were wined and dined, smoked with and entertained in royal style. He was a "hail fellow, well met," everywhere; patronizing or obsequious as occasion seemed fit, sent forth to conquer large orders from the established—and flirt with the unacquired—country trade, mostly by the method in vogue of prodigal spending and showing the aforesaid "trade" a few pointers in the art of high life.

With the growth of the business world and consequent competition, however, new ideas crept in and have to a great extent supplanted the old plans of campaign. Modern-headed men decided that good goods could be sold on their merits—that liquor, cigars and the like were unnecessary and foreign to the issue, with the result that a new brand af commercial travelers handle the cream of the trade, to the mutual satisfaction of both sellers and buyers. And the change has been helped along not a little by an awakening on the part of the buyers to a grim realization of the fact that it was really their own money they were being feted with, and that just as sure as fate it came out of their own pockets, one way or another, in the long run.

The traveler of to-day is the searchlight of the ship of commerce, lighting up with far-reaching rays the channels of safe and easy business navigation, or quickly bringing to observation any dangerous or obstructive element. He is, or should be, the long distance eyes and ears of headquarters, and in this age of the measurement of brains against brains he must surely have a clear head and be extremely "smooth" to constitute a success. He must be strictly business from start to finish for the retail merchant has wearied of the rehashed story and blarney talks and much more appreciates valuable news and business pointers from a man he can thoroughly respect. His reports are regular and comprehensive and there is no reckless extravagance in his expense accounts. His real worth is measured largely by his sobriety—a point, by the way, that is considered first and foremost by the wisest heads of the best business concerns on this continent. And right here let us divert for a moment from the traveler specially to say that if any brainy, clever man, in any position, has cause to wonder why some fellow employe — possibly one who is comparatively slow and non-progressive —gradually but surely is promoted up the ladder of success, higher than himself, let such a man take an inventory of his habits and see if they are such as to warrant the perfect confidence of his employer. Let no man allow his sensible nature to be deluded by any foolish "yellow streak" that may be in him, into believing that the use of saloon side doors or breath perfume conceals the fact that he is more or less saturated with liquor, because it is always apparent to the person not so addicted, and to their abhorrence of a depraved habit is added disgust at puny efforts for concealment. If it is not a manly and approved of thing to drink intoxicating liquors and prostitute the brains publicly, sneaking around back doors and otherwise attempting to dodge the issue certainly won't help to gain respect. It would make a good many men squirm if they knew how thoroughly their employers are acquainted with their habits. Not only the banks, railroads and other big institutions, but merchants of every class nowadays avail themselves of means of quietly ascertaining how far they feel they can trust their employes, and sometimes for weeks and even months every movement and if possible every word is recorded by an apparently invisible agency. This system is no injustice to employes. If their way of living is clean and good it is most beneficial; if otherwise, they can blame nobody but themselves for results.

And all this relates just as directly to the present day traveler as any one on earth. Note well the respect of employer, merchant, fellow traveler and people generally for the man who exhibits sober habits, gentlemanly deportment, and honesty in all his dealings, for such is the eminently successful commercial traveler of to-day.

To such men too much appreciation and consideration cannot be shown by employers, for it is within their province to make ten-fold returns for every dollar awarded them.

Western Canada Factory, 797 Notre Dame Ave., Winnipeg, Man.

FOUNDRY AND METAL INDUSTRIES

A new steel bridge will be built at Elmdale, Ont., over the Wye River.

The Forwell Foundry Co., of Berlin, will double the capacity of their plant.

The Dominion Department of Marine and Fisheries calls for tenders for galvanized towers for lighthouses.

The Transcontinental Railway Commission asks for tenders for eight steel bridges in the Province of Quebec.

The Mineral Range Iron Co. are building a five-mile spur line from the Centre Ontario Railway to their mine at Bancroft, Ont.

A rich strike of zinc is said to have been made near Franklin camp, B.C. The property is owned by Arthur Langford and others.

The Canadian Heating & Supply Co. have taken the old factory buildings of the Niagara Metallic Furniture Co. at Niagara Falls, Ont.

The Grand Trunk Railway Co. have ordered twenty new locomotives from the Locomotive & Machine Co., of Montreal, and the American Locomotive Co., of Schenectady, N.Y. The cost will be $200,000.

The Forwell Foundry Company, Berlin, have purchased land adjoining their foundry with a view to increasing their plant. The Canadian Castile Coap Company also intend to erect a factory on an adjoining site.

Eleven hundred attended the Canadian Westinghouse Co's picnic at Niagara Falls last Saturday. The majority came home the same night, but a large number remained over until Monday.

G. S. Campbell, who has recently returned from England, reported at a meeting held in the board of trade rooms, Halifax, the result of the satisfactory interview he had with Swan and Hunter regarding the establishing of a steel shipbuilding plant at Halifax. Mr. Hunter expressed disappointment at the delay in the granting of a federal bounty, and stated that as soon as this were given, and also an agreement to admit free of duty certain machinery for plant not made in Canada, he was prepared to take up the proposition in earnest for the establishment of large shipbuilding works there.

INDUSTRY FOR STURGEON FALLS.

Sturgeon Falls, Ont., has secured the works of the North Ontario Reduction & Refining Co., which has been organized with a capital stock of $500,000, to provide for the Cobalt and Sudbury districts the smelting reduction and refining works so necessary for that part of the country. It will no longer be necessary to export the ore, and thus the mine owner will save not only his freight charges, but also the valuable by-products.

SHERWIN-WILLIAMS PAINT, Prepared, is *the* paint for the Painter to use, because it is the *best* paint that can be made, because it is a combination of the *highest* quality paint materials and the *highest* skill in mixing and grinding, and because it gives satisfaction alike to the Painter and the Man-Who-Pays-The-Bill.

This is a point that should receive the serious consideration of the Dealer. The trade of the Painter is a valuable asset. You must give paint value if you want to secure and keep his trade. *S. W. P.* is paint value, through and through. It adds to the reputation of any Painter in the high quality of work it enables him to do.

We have a good *S. W. P.* proposition to make you. If you are interested in securing the Painter's trade, write us today.

MICA INDUSTRY GROWING.

The development of the mica industry in Ontario is illustrated in the rapid increase of employes engaged in the trade. At present some 700 women are at work in the various branches, which is 300 more than last year. Mrs. Annie Brown, provincial factory inspector, has returned from the Ottawa district, where several new factories are being established, most of them at Carleton Place.

ASSIGNEE'S SALE

The Assignee of the estate of Pink & Co., will offer for sale by Public Auction, en bloc, at the store premises, No. 279 Talbot Street St. Thomas, the entire Stock in Trade, consisting of Wall Paper, Paints, Varnishes, Mouldings, etc., valued at about $2,250.00, at the hour of 11 o'clock a.m. on Tuesday, July 31st, 1906. Stock sheets may be seen at the Office of R. H. McConnell, St. Thomas, Solicitor for Assignee.

R. J. MILLER, Assignee.

Dated, July 17th, 1906.

Metal Shelf Boxes

For Sale Cheap

I have 500 Metal Shelf Boxes for sale cheap. Bought them cheap and will sell them right. They have solid oak fronts and handsome brass pulls and the 500 will fit up a good sized hardware store. Used only two years and as good as new. This is a rare chance.

PAINT, OIL AND BRUSH TRADES

CANADIAN LINSEED OIL DUTIES.

Canadian producers of linseed oil are expected to bring the matter of increased protection for their industry before the Tariff Commission when it sits in the east. According to the trade statistics for the fiscal year ending June 30 last, the imports of vegetable oil from Great Britain were $609,387, an increase of $282,055, linseed oil making up a large part of this increase owing, it is said, to the closing of the Canadian mills. Before 1878 the duty was 17 per cent. Now it is 25 per cent., but the preference reduces it to 16 2-3 per cent. on imports from Britain, the chief source of supply. Seed is grown in the Northwest, but there was not enough to keep all the mills going, and some seed had to be imported. Great Britain's supplies of seed used formerly to come mostly from the British East Indies, but South America is now a great producer, though South American product does not yield such high-class product as the East Indian seed. Canadian oil-millers contend that oil from South American seed should not get the benefit of the preference, even coming from British mills, but in reply British millers state that it is mixed with oil from British East Indian seed, and the preferential duty is applied. Then this year's conditions have been peculiar; the controlling influences in the United States market cornered the seed there, and put prices up, at the same time drawing some Canadian seed by high price, and thus reducing the supply of raw material. Moreover, the British prices for oil have been abnormally low, so that the ad val. Canadian duty furnished little protection to the Canadian mills, especially with the high price for Canadian and American seed, caused by the corner. The British product is practically barred out of the United States by a duty of 20 cents a gallon, equal to 24 cents an imperial gallon.

GLASS CONSTRUCTION.

English makers of coach varnishes are not pleased over the fact that a glass coach is to be used at the Drury Lane pantomime to take Cinderella to the fete. Once glass coaches come into vogue the demand for coach varnish would appreciably diminish. But the architects are predicting that not only coaches but buildings as well will be built almost wholly of glass.

In Europe some years ago there sprang up what is called the new art. It has found expression in some of the most beautiful new buildings in Brussels, Berlin, Nuremburg and Turin. In the latter city a residence has lately been built with a glass roof, walls of glazed tiles and floors of glass mosaics. With its brilliant reflecting surfaces, its many colors and soft light filtering through the translucent roof and stained glass windows, it is like a fairy palace.

Houses with glass staircases and even glass balustrades and glass partitions between rooms, with just enough color to prevent transparency, have already come into existence. By a toughening process the glass for these purposes loses its natural brittleness and becomes almost as proof against fracture as metal.

In Paris some of the streets have been paved with glass bricks and have proved very serviceable. Tall factory chimneys have been made of glass bricks and instead of being unsightly piles have become spires of iridescent color.

The process of turning glass to new forms and uses is shown in many other ways. Even table glassware has taken on new styles, so as to hardly be recognized as household articles. But the chief charm of glass in house-building and ornamentation is in the possibility it offers of the beautiful blending of colors. Color has heretofore been the last thing thought of in building a house. Yet love of color is one of the chief human instincts. All at once it has been discovered that houses in a city need not be dull and grimy, but may be as beautiful as pictures by the use of glazed bricks and tiles.

It is a fact not generally known that in certain sections of the west there are houses built of natural volcanic glass, jasper and lava stone that rival the rainbow in color. In casting about for novel effects architects are now taking all these things into consideration. There is a diversity of opinion, but many claim that glass is the material that gives the greatest variety of color, the most light and healthfulness to buildings. It is being used more and more and in this fact is found the argument that eventually it will come to take the place of iron and steel.

PAINT PIGMENTS FOUND.

Large deposits of paint pigment are reported to have been discovered on the shores of Houghton Lake, near Vonda, Sask. The colors are yellow, vermillon and slate, and the supply is inexhaustible. Settlers are using it to paint buildings in the vicinity. Mica deposits have also been located there.

DO NOT

recommend the same material for finishing a floor that you would for a door. One is to be looked at and admired, the other is to be walked on, jumped on, has to withstand mud and water, furniture, pianos, sewing machines, etc., rolled over it and still be an object of admiration. Granitine Floor Finish for natural finish and Chijap Floor Lac for stained finish stand lots of abuse. They wear on the job, not off.

PAINT AND OIL MARKETS

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, July 27, 1906.

Further big advances in shellac on foreign markets have forced the price of gum locally five cents per pound. At this higher price great strength is manifest, and there is every probability that shellac varnish will have to very soon follow the lead of raw material. At present, however, the same prices are quoted on this product as have ruled for some time past.

Both turpentine and linseed oil appear to be firmly held at their present prices, and at time of writing there is no prospect of any change in the immediate future.

General business continues to surprise the manufacturers by its volume. There is naturally less doing now than a few weeks ago, but orders are greatly in excess of the corresponding season's last year.

LINSEED OIL—The market is firm and prices generally quoted are as follows: Raw, 1 to 4 barrels, 52c.; 5 to 9 barrels, 51c.; boiled, 1 to 4 barrels, 55c.; 5 to 9 barrels, 54c.

TURPENTINE — The market has steadied considerably and the price is now firmly held at the following quotations: Single barrels, 86c. per gallon; two barrels or over, 85c. per gal.; for smaller quantities than barrels, 5c. extra per gal. is charged. Standard gallon is 8.40 lbs., f.o.b. point of shipment, net 30 days.

GROUND WHITE LEAD—We quote: Best brand Government standards, $6 to $6.25; No. 1, $5.65 to $5.90; No. 2, $5.30 to $5.65; No. 3, $5.05 to $5.30, all f.o.b. Montreal.

DRY WHITE ZINC—Prices are very firm and we are quoting as follows: Red seal, 7c. to 8c.; French V. M., 6c. to 7c.; Lehigh, 5c. to 6c.

WHITE ZINC (ground in oil) — We quote: Pure, 8c. to 9c.; No. 1, 6½c. to 7½c.; No. 2, 5¼c. to 6¼c.

PUTTY—Our quotations are: Pure linseed oil, $1.75 to $1.85; bulk in barrels, $1.50; in 2-lb. irons, $1.80; in tins, $1.90; bladdered putty in barrels, $1.75.

ORANGE MINERAL—We quote as follows: Casks, 7¼c.; 100-lb. kegs, 7½c.; smaller quantities, 8½c.

RED LEAD—Somewhat easier conditions prevail. Prices, however, remain as follows: Genuine red lead in casks, $6; in 100-lb. kegs, $6.25; in less quantities at the rate of $7 per 100 lbs.; No. 1 red lead, casks, $5.75; kegs, $6, and smaller quantities, $6.75.

GUM SHELLAC—An advance of 5c. per pound has been made here and we are now quoting: Fine orange, 60c. per lb.; med. orange, 55c. per lb.; bleached shellac (white) 65c. per lb.

SHELLAC VARNISH — We quote: Pure white, $2.90 to $2.95; pure orange, $2.70 to $2.75; No. 1 orange, $2.50 to $2.55.

MIXED PAINTS—Prices range from $1.20 to $1.40 per gallon.

CASTOR OIL—Conditions are steady and prices are firmly maintained for both present and forward shipment. We quote: Firsts in cases, 8½c.; in barrels, 8c.; seconds in cases, 8c.; in barrels, 7½c.

REFINED PETROLEUM — We quote as follows: American water white, 17c.; Canadian prime white, 15½c.; astral, 20c., ex warehouse.

GASOLINE—The ruling quotation at present is 24c. in bbls.

BENZINE—Market is steady at 24c. in bbls.

WINDOW GLASS—We quote: First break, 50 feet, $1.85; second break, 50 feet, $1.95; first break, 100 feet, $3.50; second break, 100 feet, $3.95; third break, 100 feet, $4.25; fourth break, 100 feet, $4.50; fifth break, 100 feet, $4.75; sixth break, 100 feet, $5.25; seventh break, 100 feet, $5.75; eighth break, 100 feet, $6. Diamond star, first break, 50 feet, $2.05; second break, 50 feet, $2.25; first break, 100 feet, $3.90; second break, 100 feet, $4.30; third break, 100 feet, $5.25; fourth break, 100 feet, $6; fifth break, 100 feet, $7; sixth break 100 feet, $7.50; seventh break, 100 feet, $8.50. Double thick, first break, 50 feet, $3.20; second break, 50 feet, $3.50; first break, 100 feet, $6.25; second break, 100 feet, $6.50; third break, 100 feet, $8.25; fourth break, 100 feet, $9.50; fifth break, 100 feet, $11; sixth break, 100 feet, $12; seventh break, 100 feet, $13.50; eighth break, 100 feet, $16; ninth break, 100 feet, $17.50; tenth break, 100 feet, $19.50; eleventh break, 100 feet, $23.50; twelfth break, 100 feet, $28.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East.
Toronto, July 27, 1906.

There are no changes in prices this week. Turpentine is firm with no indications of any further weakening. Contracts for future delivery at present prices have been refused in the south. For September shipments a quarter of a cent advance is asked.

Linseed oil is the same, with a steady market, but it is not impossible that a further weakness will be felt owing to the large quantities moving, and the good crop prospects.

General business is good, better than it has ever been, and all manufacturers are well satisfied with the trade.

WHITE LEAD — Ex Toronto, pure

TO THE VARNISH BUYER

the most serious considerations are quality, reliability and uniformity, and these qualifications are of special importance to the dealer who is trying to build up a permanent varnish trade.

Berry Brothers' label or brand may be safely relied upon as ensuring the above conditions.

Our varnishes are the safest goods to handle and the surest and most reliable goods to use.

NOT HOW CHEAP BUT HOW GOOD—Our Motto

This is the proposition facing the dealer who Sells Paint.

"ARK BRAND" PAINT

is not a cheap (and poor) Paint; but is the best experience has enabled us to make. It is based on the proper proposition of the right kind of pigments ground in pure linseed oil; and at the price which we offer it to you, it is cheaper, better and more economical for you and your customers than any other paint made. You owe it to yourself to try a sample order.

NOTE.—"ARK BRAND" FLOOR PAINT is unequalled for Quick-Drying and Long-Wearing.

REFINED PETROLEUM—Trade continues normal. We quote: Canadian prime white, 14c.; water white, 16c.; American water white, 16c. to 18c. ex warehouse.

CRUDE PETROLEUM — We quote: Canadian, $1.38; Pennsylvania, $1.64; Ohio, 98c.

THE FLAXSEED SITUATION.

Late receipts of flaxseed have been so large that the stocks in Duluth are increasing instead of decreasing, as was expected. The export movement has fallen off, and that, too, helps the piling up of stocks.

Latest reports from abroad indicate some improvement in the linseed oil markets, with the consequent hope that the demand for seed may be enlarged. Oil has touched a low level and may now be on the up turn. The stocks are decreasing. If they continue to be absorbed at the present rate the crushers will soon find it desirable to run more heavily, and a shortage of Indian or Argentine seed would necessitate larger imports from the United States. This might come as a relief to holders here who are confronted with another big flaxseed crop in prospect. The Argentine exports of flaxseed for the first six months of 1906 were less than one-half those of the corresponding period of 1904 and less than two-thirds of the first half of 1905.

As to the new crop flax, the acreage is estimated to be about the same as that of last year. It is, of course, too early to make even an approximate guess at the outturn, but this much is known, that the plant is thriving and bids fair to give a good yield. It would not be surprising, then, if there should be another heavy crop of seed this Fall.

TO BUY MORE LAND.

The Francis Frost Company's request for the purchase of the north end of Cawthra avenue, Toronto Junction, to enlarge their factory site has met with the approval of the council. It is the company's intention to increase the present plant sufficiently to manufacture additional lines.

PAINTERS' CONVENTION.

The third annual convention of the Master Painters' and Decorators' Association of Ontario was held at Windsor this week. Paint manufacturers and dealers contributed to the entertainment of the craft.

TURPENTINE AS A BLEACHER.

The part played by turpentine as a bleaching agent during the drying of paint is not inconsiderable, although it is only in the case of white paints that the action is observed to practical effect, says the Oil and Colourman's Journal. The drying of paint films containing turpentine appears to be associated with the formation of hydrogen peroxide, whose bleaching properties are well known. Thus, paint films exposed freely to the action of air and light frequently dry out lighter than the original paint. Turpentine substitutes do not possess the bleaching property, and it is well known that paint made from these materials is apt to assume a yellowish tinge after drying, due, of course, to the normal darkening in color which linseed oil undergoes on drying. An interesting case is quoted by Andes as illustrating the bleaching action of turpentine. A manufacturer of textile goods used in the finishing of his hand-made products a mixture of linseed oil, turpentine, and white pigment, and in the case of machine-finished goods a similar mixture in which turpentine was replaced by benzine. The hand-made goods dryed out perfectly white, while the machine-made goods developed a yellow tone. When a change was made in the composition of the coating used with the machine goods, turpentine being introduced instead of benzine, the color at once equalled that of the hand-made goods.

The Canadian Turpentine Company, Cobden, Ont., have purchased fifteen acres of land at Barry's Bay. The company have a number of men and teams at work at present erecting buildings.

U. S. STEEL PROSPECTS.

Charles M. Schwab's predictions in regard to the steel industry are being verified with remarkable accuracy. Two years ago, when it was generally believed that the productive capacity of the steel plants was in excess of the country's requirements, he maintained that the country's demand for steel would soon overtake production, and that time has now arrived. Advices from every steel manufacturing centre tell the same story—that the wants of consumers of steel cannot be supplied. Mr. Schwab foresaw, as but very few did, the enormous quantity of steel that would be needed in the structural steel business, including bridge building and the building of interurban electric lines. The uses for steel now are multifarious and demands are increasing in every line. The end of this month will see by far the largest tonnage of steel orders booked ever known in the United States.

Mr. Schwab's estimate of the value of the United States Steel Corporation's holdings of steel-making iron ores has been also borne out fully. Ores of this class delivered at Cleveland are commanding higher prices each year and are now bringing the highest prices yet recorded. Influenced by the extraordinary demand for Bessemer iron for steel-making purposes, there is a very active demand for Lake Superior ore.

Men in the trade are now looking to see Mr. Schwab's prognostications in regard to the steel corporation's earning power realized. Based on actual earnings for the first half of the year and on estimates of profits on business booked which will keep the plants going at their full capacity into 1907, it is considered morally certain that earnings of from 12 to 13 per cent. can be shown on United States Steel common this fiscal year. The United States Steel Corporation's products are in demand all over the world. South America, Japan and Canada are active buyers of steel rails. Canada has 5,000 miles of railway in course of construction and Brazil is building 3,000 miles. In the opening up of Eastern Asia, Japan will take large quantities of steel rails. Railway building in Argentina is going on actively. The mileage under construction or contemplated in the United States is larger than in several years. In fact, railway building the world over was never so active as it is now, which accounts for the unprecedented bookings of orders for steel rails.

WOOD SASH PINS.

In the last issue of Hardware and Metal an inquiry from a subscriber was published asking where wooden sash pins could be purchased. The following firm names have been sent in: The Cumming Mfg. Co., Renfrew, Ont.; and two American firms, E. B. Estes & Sons, New York, and Bogert Hopper, 162 William street, New York.

GETTING BIG FAST.

The assessment of Regina, Sask., has more than doubled in a year. Here are the features: Total assessment, $7,083,979; exemptions, $598,575; net assessment, $6,485,404; 1905 assessment, $3,000,243; gain in year, $3,485,158. Amount assessed for income, $110,301.

NOVELTIES FOR THE HARDWAREMEN

Readers desiring the addresses of the manufacturers or jobbers of the articles described, or any additional information, can secure the same from the Editor of HARDWARE & METAL.

AUTOMATIC SASH HOLDER.

The Automatic Sash Holder Co., 277 Broadway, New York, have just placed on the market the automatic sash holder here shown. It is designed to automatically hold in any required position

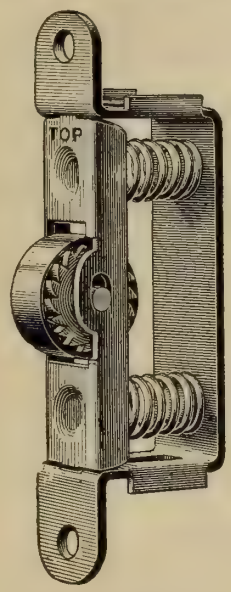

FIG. 1—Automatic Sash Holder, Nearly Two-Thirds Size.

both upper and lower sash without sash cord, pulleys or weights. The principle of the holder has been thoroughly tried out for several years in portable house construction, and is now greatly improved in every detail to satisfy exacting conditions. It is easily installed by making a small mortise in the sash.

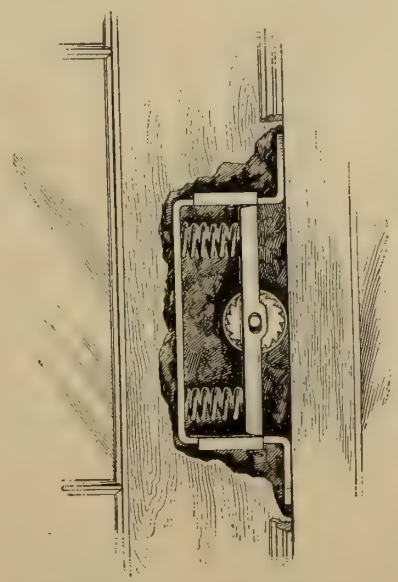

FIG. 2—Holder in Position, with Part of Stile Cut Away.

When in position the wheel runs up and down on the jamb of the window frame, out of sight. When the sash is raised the wheels revolve, but when the lifting ceases the wheels move upward in elongated slots and lock with a ratchet, a spring forcing them over to the frame. On light sash, one holder is sufficient, but in heavy sash two are required. Dealers requiring further information regarding this appliance can get it by writing the Automatic Sash Holder Co., 277 Broadway, New York.

AUTOMATIC STROPPER.

The Clauss Shear Co., of Freemont, Ohio, have put on the market a new stropping machine.

The strop will last indefinitely, as it is impossible to cut it if the razor is put in it according to directions.

FIG. 1.

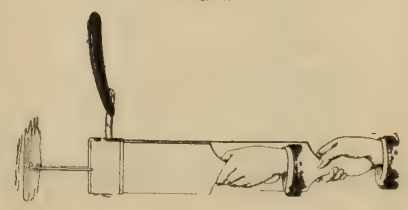

FIG. 2.

It is very simple and the smallest child can strop a razor on this machine perfectly.

It is something entirely new and any reader of Hardware and Metal who is not acquainted with it should write for descriptive circular.

SHOVEL AND TOOL CO. BUILD.

Work has been commenced in Peterborough on the new warehouse of the Peterborough Shovel & Tool Company. The building will be 40 by 120 feet, and will be close to the C.P.R. siding.

SYDNEY STEEL MILL DAMAGED.

Three thousand dollars' worth of damage was done by a fire which occurred in the Dominion Iron & Steel Company's rail mill on Monday. There is no insurance on the part of the building where the fire occurred.

BUILDING AND INDUSTRIAL NEWS

HARDWARE AND METAL would be pleased to receive from any authoritative source building and industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories, foundries or other works, railway or mining news. All correspondence will be treated as confidential when desired.

Saskatoon asks for tenders for a complete waterworks system.

F. Meech, of Oxford Mills, Ont., will build a new general store.

High grades of pottery clay are said to have been discovered near Chelsea, Ont.

The Arcola Wood-working Co., of Arcola, Sask., are building a sash and door factory.

Skinner & English, of Forest, purpose establishing an evaporating plant at Wyoming, Ont.

A syndicate, headed by John A. Moore, of Seattle, will erect saw mills on Moresby Island, B.C.

T. H. Wiggins reports finding a large coal deposit near Goose Lake, about 80 miles from Saskatoon, Sask.

Edington & Jack have the contract for the new glass factory at Cayuga, Ont. It will be 216 by 60 feet.

The J. B. Gateman Co's button factory was destroyed at Berlin. Loss $8,000 to $10,000, partially insured.

John Fell Mills, of Buffalo, is negotiating with Welland, Ont., with a view to establishing an automobile factory there.

The Brantford Roofing Co. have finished the construction of their new building and have commenced operations.

It is reported that Gowans, Kent & Co., of Toronto, have purchased the Henderson Roller Bearing building on King street west.

Rhodes, Curry & Co., of Amherst, N.S., have received a contract from the Grand Trunk Pacific for 2,500 cars, aggregating about $2,000,000.

Calgary citizens will vote on raising another $10,000 for the municipal power plant. This will bring the investment up to $100,000 if it carries.

The Imperial Electric Motor Co., of Toronto, are in negotiation with the City of Calgary with a view to establishing a line of motor 'busses in that city.

Lethbridge city council has accepted an offer of a flour milling Co., and the Medicine Hat Woolen Co. to come there. They also decided to bore a 2,000 foot test for natural gas.

An order-in-council has been signed by the Lieutenant-Governor of Ontario authorizing the Brantford Screw Co. to change the amount of their preferred stock to $100,000 instead of $50,000.

Edmonton has let a contract to Taylor, Bourchier & Peters for the construction of a new sewage system for $192,966; and an additional contract was awarded Shannon & Graham for installing water mains for $11,334.

Hamilton is to be the Canadian headquarters of the Berlin Co., of Beliot, Wis., the company being large manufacturers of wood working machines. The Canadian branch, with a capitalization of a half million dollars, is to make its headquarters at Hamilton and there large factory buildings will be erected in which 200 men will be employed.

J. T. Marion, secretary of the Brandon Board of Trade, announces that he is in communication with firms with a view to establishing in that city factories to manufacture fences, wagons, electrical supplies, biscuits, stoves and wholesale houses to handle boots and shoes, and agricultural implements. A 20,000 club has been organized and a charter granted for a transfer railway.

Parkhill, Ont., has an industrial committee which is doing what it can to advertise the town, and develop its industries. The committee is composed of several ex-mayors, the secretary being ex-Mayor A. W. Humphries, president of the Ontario Retail Hardware and Stove Dealers' Association. One method adopted by the committee is the general use of an envelope, the back of which is used for advertising purposes, the various advantages of the town being enumerated in brief but artistic fashion.

The farm implement trade in Western Canada during the present year promises to dwarf anything which has preceded it. The large number of settlers who are advancing in a stream to the fertile plains of the west need a great quantity of implements wherewith to carry on the operations of the farm. Already there has been an increase of from 50 to 150 per cent. over the business done a year ago. At the rate immigrants are going in this increase should steadily grow. In connection with this western development it is interesting to note that in ten days, early in the season, 334 carloads of settlers' effects were received by the Canadian Pacific Railway Co., from the United States side, and during the same time 182 carloads from Eastern Canada were handled at Fort William. This makes an average of 53 carloads of new settlers' belongings going into Western Canada daily. When to the number of farmers represented by these figures are added the business and professional men and artisans who will follow them, the prospective increase for the year becomes truly great.

BUILDING NOTES.

A $75,000 post office will be built at Owen Sound.

The Grand Trunk is erecting a station at Wingham, Ont.

B. Danis, of St. Thomas, will build a $75,000 residence.

The Baptists of Belleville are erecting a $15,000 church.

A $50,000 Normal School will be erected at North Bay, Ont.

The stables of the Hamburg Mfg. Co., at Brandon, were burned.

The Northern Bank has purchased a site for a building in Regina.

The Ottawa House at Port Arthur will be enlarged and remodelled.

J. E. Parr, Crystal City, Man., is erecting an implement warehouse.

Tenders for an 800,000 bushel elevator at Port Colborne, Ont., are asked.

McCracken Bros.' grist mill at Tiverton, Ont., was destroyed by fire.

Extensive improvements are to be made to Albert College, Belleville.

The V. C. Maddock Co., of Winnipeg, will build a brewery at Moose Jaw.

The New McMaster University science building, Toronto, will cost $50,000.

W. S. McDonald, of Pipestone, Minn., will build a three storey hotel at Winnipeg.

The Hayne Milling Co., of Brigden, Ont., are increasing their milling capacity.

The contract for building the C.P.R. from Proten to Walkerton, Ont., has been let.

The Metropolitan Tabernacle congregation (Baptist), Toronto, will build a $15,000 church.

The A. R. Williams Machinery Co. will erect a large building at Front and Bay streets, Toronto.

The Port Credit Brick Co. are erecting a three-storey dwelling apartment for their workmen.

The Bank of British North America will build a bank building in Toronto to cost $12,000.

The Dominion Department of Railways and Canals asks tenders for a turning basin for Welland Canal.

Mrs. J. A. MacIntyre is to spend $143,000 on the erection of three seven-storey warehouses in Montreal.

Henry Birks, Montreal, is to spend $150,000 for a new store and additions on Phillips Square in that city.

The Y.M.C.A. at Hamilton are endeavoring to raise $50,000 to spend in the erection of a new building.

The National Drug & Chemical Co. are to erect a three-storey business block at London, the cost to be $25,000.

The Dominion Bank has applied for a permit to build a $16,500 branch at Queen and Pape avenue, Toronto.

Pease-Waldon Co., Ltd.
WINNIPEG

McDougall & Ireland have the contract for the John E. Smith block at Brandon. It will cost $50,000.

The Canadian White Co., of Montreal, have the contract for the new Bank of Commerce building at Vancouver.

The Canadian Bank of Commerce have let the contract for the erection of their new office building at Woodstock.

Geo. F. Webb, Hamilton, has secured a contract for the erection of a new drill hall in that city to cost $220,000.

Goderich has awarded $10,000 worth of concrete sidewalks to W. J. Anthistle, of London, at 8 1-2 cents per square foot.

The Calgary Milling Co. and the Alberta Biscuit Co. have commenced the construction of two large factories at Calgary.

McGillivray & LaBelle, North Bay, have been given a contract to build a new public building at North Bay, to cost $35,000.

The Northwest Thresher Co., of Stillwater, Minn., will build a warehouse in Regina, and make it their Canadian headquarters.

Gribbel & Skene, Vancouver, have the contract for a four-storey store and apartment building in that city for Lefevre & Farrell.

E. F. Munro, New Glasgow, has secured the Government contract to build a new public building at Inverness, N.S., to cost $15,000.

The Grand Trunk Railway Company have let contracts for a 10-storey office building to be erected in Montreal at a cost of $300,000.

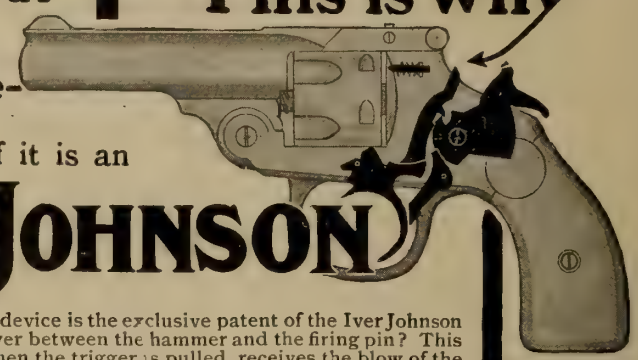
Kavanough & Holden, Vancouver, are having plans prepared for a 50-room hotel building to be called the Alberta Hotel of Vancouver.

S. F. Witham, of Brantford, has been awarded the contract for the new chemical building for the Guelph Agricultual College, at $5,000.

The public library board of Perth, Ont., have awarded the contract for their new library to C. J. Speagle, of Westport. The amount is $10,000.

McDougal & Ireland, Brandon, Man., have received the contract for building the Borbridge block in that city, the amount of the contract being $25,571.

Buildings totalling in value $727,000 were commenced in Edmonton during the first six months of the year, this total being almost as large as the total for all of 1905.



The Maritime Departmental Store Co., capitalized at $500,000, are having a large four-storey brick block erected at Amherst, N.S., by E. N. Rhodes and W. A. Fillmore.

J. J. M. Pangman is to erect a $20,000 residence at Montreal, and Robert Loring and H. J. Fuller have taken out permits for residences to cost $15,000, both to be erected in the same city.

Cupar, Sask., is having a building boom. T. J. Shore is erecting a store; the Union Bank a new building; the Dowd Milling Co. a new elevator, and the Cupar Hardware Co. a large addition.

Accidental Discharge Impossible—

This is why

True only if it is an

IVER JOHNSON

The positive safety device is the exclusive patent of the Iver Johnson Revolver. See the lever between the hammer and the firing pin? This lever is raised only when the trigger is pulled, receives the blow of the hammer and transmits it to the firing pin. **That's why** you can throw a loaded Iver Johnson against a stone wall without fear—no discharge can possibly follow, as the hammer **never** touches the firing pin. An Iver Johnson never fails when you **pull the trigger** and never "goes off" when you don't.

Iver Johnson Safety Automatic

Prices—Hammer $6.50, Hammerless $7.50.

Iver Johnsons are sold by dealers the world over, or direct from us if your dealer won't supply

Please send for descriptive catalogue, free upon request. It tells all about it.

IVER JOHNSON'S ARMS AND CYCLE WORKS, FITCHBURG, MASS.

STOVES FOR NORWAY.

United States Consul B. M. Cunningham, of Stavanger, Norway, says: "There is a splendid field here for the introduction of modern cook stoves and ranges. Ninety-five per cent. of the bread consumed is bought at the bakeries, the stoves not being equipped with ovens for baking bread. Very few farming tools are manufactured, and those that are made for the local trade do not compare at all favorably with the American make. In the hardware line one can buy almost every kind that there is a general demand for, but the prices of the American brands are higher than the domestic article."

THE EARS DID IT.

A Parisian swell recently had a crayon picture of himself made, which he afterwards pretended to find fault with.

"Does not bear the slightet resemblance to me," he said, "and I will not take it."

The artist protested, but all to no avail. "All right, sir," he remarked finally, "if it don't look at all like you, of course I can't reasonably expect to get paid for it."

After the dandy had left, the painter added to the portrait a magnificent pair of asses' ears, and exhibited it in a window, thus altered, to the gaze of the curious public.

It had not been long so exposed, when the dandy rushed into the artist's studio in a towering rage, and, finding that threats amounted to nothing, he at last offered to buy it, even at a considerable advance upon the original price.

"It wasn't strange you didn't recognize your resemblance to the picture at first," said the painter, "but I knew you'd notice the likeness as soon as I added those ears."

TRADE WITH TRINIDAD.

In his report of Canadian trade at the islands of Trinidad and Tobago given in the Weekly Report of the Department of Trade and Commerce, dated July 9, Edgar Tripp, commercial agent at the Port of Spain, Trinidad, states that Canada appears to be the only source from which imports were increased. Cordage and twine amounting to about $19,000 were imported, while hardware amounting to $1,900 was also purchased from Canada. In cordage and twine the goods of Canadian manufacture headed the list, the imports from Great Britain being about $1,000 less in value, while the imports from the United States were very small in comparison with the amounts purchased from Canada or Great Britain.

The Montreal Reduction & Smelting Company have purchased a site at North Bay, and, it is said, will shortly apply to the Temiskaming and Northern Ontario Railway Commission for a siding for a smelter. An Arizona company may also build a smelter in Cobalt.

CONDENSED OR "WANT" ADVERTISEMENTS.

BUSINESS CHANCES

$2,500 will buy the stock of stoves and tinware, tools, patterns and raw stock of a live business in the thriving town of Burlington. Apply, Lock Box 113, Burlington. [30]

PLUMBING AND STEAMFITTING

SEWERAGE SYSTEM FOR RURAL HOMES

By M. J. QUINN

(Reproduced from HARDWARE AND METAL of January 23, 1905, by request.)

It is perhaps no exaggeration to say that, having regard to the frequency with which it comes up for consideration, and many other circumstances, the question of properly disposing of sewage is one of the most important matters with which the health authorities throughout the country have to deal, and yet it is a remarkable fact that in these days of popular education, when the people enjoy the benefit of free literature and lectures on fruit growing, dairying, domestic science, etc., that a knowledge of so important a subject, and one so closely allied to their physical and moral welfare is confined to a limited number.

True, a vast amount of experimenting has been done during recent years, and the matter has received a great deal of attention from scientific men, the results of whose labors have been freely discussed at medical conventions and reported in medical journals, but the valuable information so obtained has not reached the great mass of the people at all.

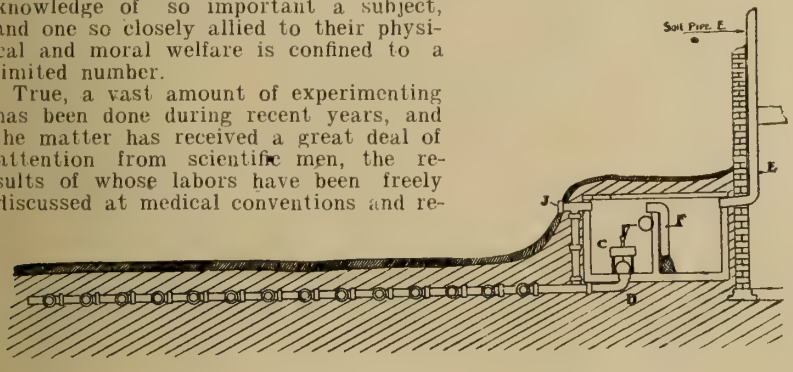

Fig. 1

Septic Tank System.

In the matter of public sanitation, the question of disposing of sewage in small towns and villages as well as in less populated districts, where by reason of its great cost a general system of sewerage is impossible, is daily becoming of greater importance, and as the title of my paper would indicate, that is the phase of the question with which I propose to deal. The system to which I intend to refer is known as the septic tank system, and I believe that nearly all who have studied it are agreed that it is at once the most natural, most scientific, simple and economical system in use to-day, and speaking from a personal knowledge of scores of the systems, I am in a position to say that it is worthy of all the good things that are said of it.

I realize that, apart from a description from a mechanical standpoint, anything I might say to medical men regarding the system would be superfluous, but for the benefit of the laymen who may be in need of information on the subject, and in order to emphasize the necessity of carrying out every detail, in constructing a system as hereafter described, I deem it wise to briefly refer to the fundamental principles which govern it.

A Purifying Agent.

It is a matter of common knowledge that living earth—or top soil—is a powerful purifying agent, but comparatively few are aware that the presence in it of countless numbers of bacteria, or microbes, is alone responsible for the chemical changes brought about in waste matter placed beneath its surface, and that these bacteria, not only through their action remove and destroy the dangerous properties of such waste matter but actually convert them into plant food, which, being taken up by the vegetation is again consumed for the sustenance of life. Pasteur divided these microbes into two classes, viz: Anerobes, or those which lived apart from air, or derived their oxygen from decaying compounds, and aerobes, or those which require plenty of fresh air for their development, and as both classes are considered necessary for the complete reduction of waste matter, it will be seen that if sewage is placed too deep in the earth, as for instance in a cesspool, where, owing to the absence of air, the necessary aerobic bacteria cannot exist, it may pass down deeper in a putrid state, and, finding its way to the water supply, not infrequently results in an outbreak of typhoid fever or some intestinal disease.

Result of Work of Microbes.

The two classes of microbes referred to have properties somewhat differing from each other, but the net result of their work under proper conditions is the breaking down of the solid matter in the sewage, the disintegrating of its constituents and the conversion of the whole into liquids and gases, in which form it leaves the septic tank, the former to be distributed under the surface of the earth, where, by reason of its contact with free oxygen, bacterial life is most active, there to be still further reduced and finally converted into nitrates, which are readily taken up by the vegetation on the surface, and the latter passing up high into the air, as hereafter described.

With this brief reference, then, to the principles which underlie what is conceded to be a most efficient system for the disposal of sewage, I propose to indicate how it should be constructed; and in order that I may the more readily make myself plain, I have drawn for your inspection a number of diagrams which I trust will accomplish the desired result.

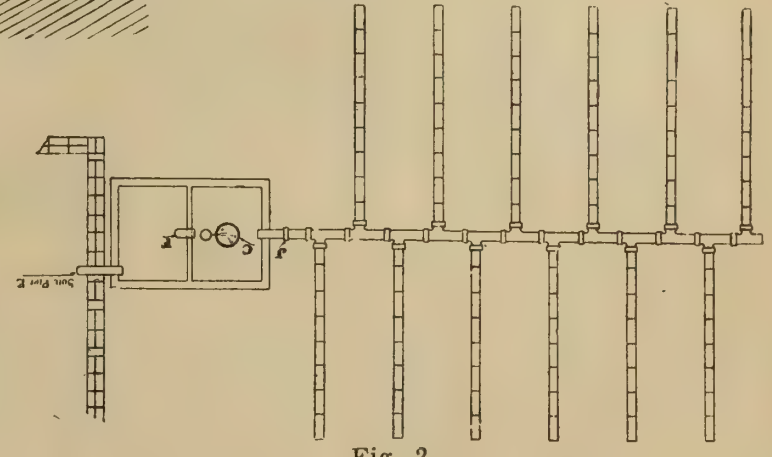

Fig. 2

Elevation of System.

In figure 1 is shown an evelation of a complete system built on level ground, with the tank placed close to the wall of the building—where, in fact, the large majority of those now in use are located.

The tank should be built of brick or stone, laid in and lined with cement, or of solid concrete, the main object being to have it impervious to moisture.

It will be noticed that the tank is divided into two compartments, an overflow pipe (F) being built into the dividing wall, the mouth of the said overflow being within seven or eight inches of the bottom of the tank, and being covered with a wire screen about the size of an ordinary pail, the mesh of said screen not exceeding three-quarters of an inch.

The main soil pipe is represented by (E) and should be directly connected with the closet, bath, sink, etc. It extends from the same compartment in which the overflow is placed to a point two or three feet above the roof, said pipe acting not only as a conductor of sewage to the tank, but also as a channel by which any gases in excess of those in solution may pass out to the atmosphere at a height which renders it impossible for them to inconvenience the occupants of the building.

(J) in the second compartment admits fresh air, which passes freely over the centre partition—spaces being left in the top of the latter for the purpose—and up through the soil pipe to the roof.

In the centre of the second compartment is placed an automatic valve (C), which is caulked into a four-inch cast iron bend, as ordinarily used by plumbers, and which is securely built into the bottom of the tank during its construction. The top of the hub of the bend is usually left slightly lower than the level of the floor of the tank.

From the said iron bend is run a line of glazed tile pipe, four inches in diameter, having a connection with the fresh air pipe, for the purpose of ventilation, and a number of openings placed at intervals of two feet or more from which are run branches of four-inch field tile with loosely butted joints.

Plan of Entire System.

Figure 2 shows a plan of the whole system and illustrates one way in which the tile may be laid, though, as will be manifest, they would do equally well if all laid in one side of the main carrier in any number of branches, or any length, providing a sufficient number in the aggregate are laid, and the rows are not placed closer together than two feet in light soil, and a somewhat greater distance in heavy soil.

The field tile should not be placed more than one foot below the surface, and must be perfectly level. for the reason that if given a fall the earth surrounding the low ends of the system would receive more than its share of liquid sewage and might in time become fouled. While if level, the earth surrounding every tile has an equal amount of work to do, and will produce most satisfactory results.

Briefly, then, the operation of the system is as follows :

The sewage from the building enters through soil pipe (E), filling the first compartment in which all solid matter is retained until it is reduced by the contained bacteria which multiply and develop very rapidly. In a liquid form it is allowed to enter the second compartment through overflow (F), which is turned down because of the presence of the bulk of the organic matter in suspension on or near the surface.

When the liquid has risen in the second compartment to the height at which the unlocking float on the valve has been set, the valve automatically opens, and discharges the contents of that compartment, be it fifty or a thousand gallons, into the system of field tiles, through which it percolates into the surrounding earth, to be taken care of by nature as already described.

As the tank takes from twelve to twenty-four hours to fill, it will be obvious that there will be abundance of time in which the water in the tiles may soak away before it again discharges.

To prevent the gases of decomposition escaping through other than the proper channel the tank must be covered first with rough plank, and then with five or six inches of earth, which in turn, if desired, may be sodded over.

Size of Tank.

In figuring out the size of tank necessary, the following may be taken as a safe rule, viz : For every occupant of a private house or hotel, allow three cubic feet of space in each compartment, while for a school or factory, where, as in the case of a house, nothing but domestic sewage is to be treated, one-third less space will be sufficient, and for every cubic foot in one compartment (or one-half the tank lay) thirteen feet of four-inch field tile.

It will be obvious that, as in the case of ordinary stable manure, human excreta, if deposited in its solid state just below the surface of the earth, would entirely disappear in a very short time, and the system just described is merely a most convenient and sanitary way of automatically accomplishing that very desirable result, with the accompanying advantage of not only depositing it in the earth partially treated, but in a much more favorable condition to receive final treatment than could possibly obtain if the former method were adopted.

Terraces.

Anticipating the difficulty which will be encountered where there is a considerable fall in the ground surrounding the building to be drained, I would refer you to figure 3, which shows a number of terraces each receiving a portion of the effluent from the tank.

It will be noticed that the end of the glazed tile is turned up a few inches on the brow of each terrace, the obvious result of which is that all the field tiles at that level must fill before the sewage can rise and overflow to the tiles on the next lower level, where the same operation takes place, and so on for any number of terraces, and as will be apparent, the sewage passing into the tiles on a high level cannot possibly escape to those lower down, so that the earth surrounding every tile will have its full complement of work to perform.

Relative Positions.

Figure 4, the horizontal scale of which is somewhat exaggerated, shows the proper relative position of the tank to the house where the field tiles have to be placed on a level considerably below that on which the building stands. In such a case it will be evident that were the tank placed on the high level, the discharge would come down with sufficient velocity to wash out both earth and tiles, while the discharge from the house to the tank as shown will not have any injurious effect on the latter.

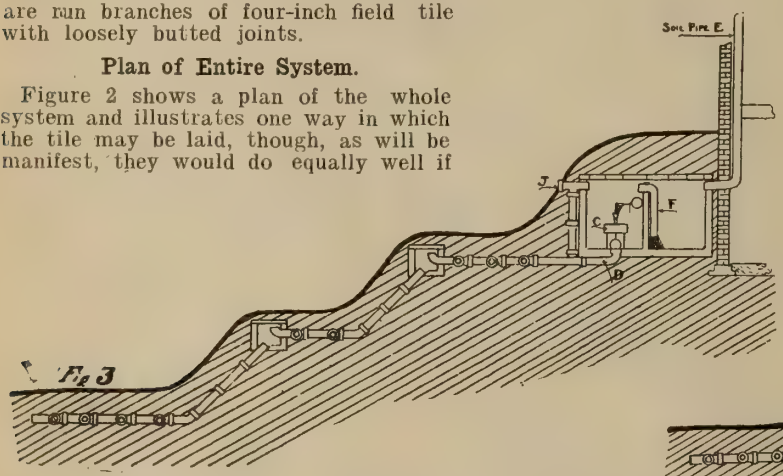

Fig. 3

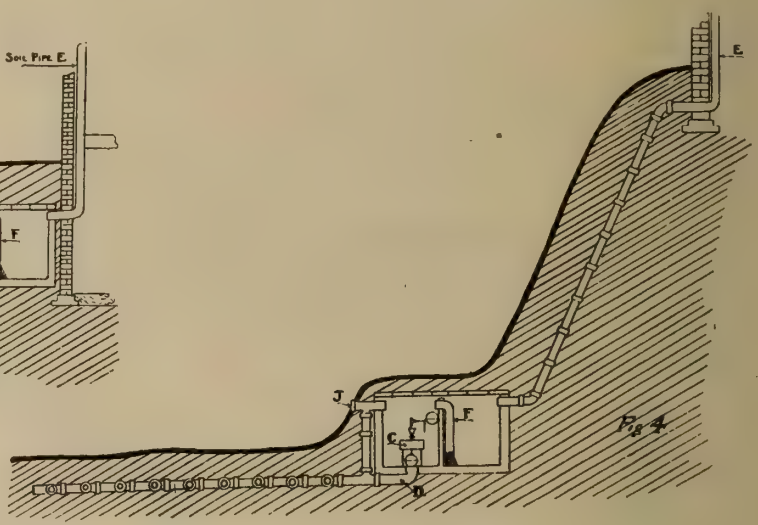

Fig. 4

In answer to a question which arises in the minds of most people who have given consideration to the system, I may say that it will not freeze in Winter, even when the frost penetrates the ground for several feet everywhere except where the tiles are laid, and, as may be expected, splendid results may be obtained in vegetables or flowers if the tiles are laid under a garden.

In conclusion I would simply refer to a few of the principal points which should be kept in mind in constructing such a system, viz :

Have the tank covered with a few inches of earth, to prevent the escape of gases, except through the soil pipe stack. See that the valve discharges at least once before the tank is covered in. See that no trap is placed on the main soil pipe to prevent the free passage of air across the tank and up to the roof, and that the necessary space for the air is left in the top of the centre partition, and, finally, take care that no disinfectants or chemicals of any kind are allowed to enter the tank, if the life of the bacteria, upon which the system depends for its success, is to be preserved.

PLUMBING MARKETS

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, July 27, 1906.

A wonderfully brisk business is still being done in all lines of plumbing supplies. Consequently instead of a midsummer quietness being evident in the offices of local jobbers, quite the reverse is the case, as the holiday season has made gaps in the staffs.

The only change in price to be noted this week is in solder. It will be found, on consulting the price list, that guaranteed half-and-half is half a cent lower than last week, while the No. 2 wiping solder is quoted a full cent higher.

The iron pipe situation is more satisfactory at present than it has been for some time past. Very little cutting is now being carried on by rival jobbers, and the market is decidedly firmer.

RANGE BOILERS—The usual trade is being done. Our prices are: Iron clad, 30 gal., $5; 40 gal., $6.50 net list; copper, 40 gallon, $22.50; 35 gallon, $27; 40 gallon, $30.75 net.

LEAD PIPE—Prices as recently advanced are held firm. Discount remains as follows: 15 per cent., f.o.b., Montreal, Toronto, St. John, N.B., Halifax; f.o.b., London, 15c. per hundred lbs. extra; f.o.b. Hamilton, 10c. per hundred lbs. extra.

IRON PIPE FITTINGS—Business is brisk and quotations are steady, as follows: Discounts on all sizes of nipples up to 6 inch, 67½ to 70 per cent.

IRON PIPE—Little or no cutting is reported at present. We are still quoting: Standard pipe in lots of 100 ft., regular lengths, 1-4 inch, $5.50; 3-8 inch, $5.50; 1-2 inch, $8.50; 3-4 inch, $11.50; 1 inch, $16.50; 1 1-4 inches, $22.50; 1 1-2 inches, $27; 2 inches, $36.50; discounts on black pipe, 1-4 inch, 62 per cent.; 3-8 inch, 62 per cent.; 1-2 inch, 71 1-2 per cent.; 3-4 inch and upwards, 73 1-2 per cent. Discounts on galvanized pipe: 1-4 inch, 47 per cent.; 3-8 inch, 47 per cent.; 1-2 inch, 61 1-2 per cent.; 3-4 inch and upwards, 63 1-2 per cent. Extra heavy pipe of 100 feet lots are quoted as follows: 1-2 inch, $12; 3-4 inch, $15; 1 inch, $22; 1 1-4 inches, $30; 1 1-2 inches, $36; 2 inches, $50. The discount for black pipe is 71 per cent., and for galvanized, 61 per cent.

SOIL PIPE AND FITTINGS—Sales continue to be large. Our prices are: Standard soil pipe, 50 per cent. off list. Standard fittings, 50 and 10 per cent. off list; medium and extra heavy soil pipe, 60 per cent. off. Fittings, 60 per cent. off.

SOLDER—Two changes in price were declared this week and we are now quoting: Bar solder, half-and-half, guaranteed, 23c.; No. 2 wiping solder, 20c.

ENAMELWARE—Our prices remain as follows: Canadian bath tubs, plate E1, 5 feet, 1st quality, $20.65, special $18.65; plate E11 and E21, 5 feet, 1st quality, $19.50, special $17.15; plate E35, 5 feet, 1st quantity, $24.65, special $22.40. American baths, rolled rim, 5 feet 2 1-2 inch rim, $22.25; 3 inch rim, $29.25. Lavatories, discounts, 1st quality, 30 to 30 and 5 per cent.; special, 30 and 10 to 40 per cent. Sinks, 18 x 30 inch, flat rim, 1st quality, $2.60, special $2.45.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, July 27, 1906.

There are no price changes this week. Solder keeps getting a little weaker, as tin moves downward, but all other supplies are firm at ruling quotations.

There is no lightening of business, although it is approaching the season when most of the contract work is let.

Radiators and steam and hot water heating supplies are in good demand, and increasing in sales weekly. This class of heating is becoming more and more used, even in moderate priced houses.

LEAD PIPE—Prices are firm and the demand lively. We quote as follows: Lead pipe, 8c., discount 15 per cent.

SOIL PIPE AND FITTINGS — Our quotations are as follows: Medium and extra heavy pipe and fittings, 60 per cent.; 7 and 8 inch pipe, 40 and 5 per cent.

IRON PIPE—A large demand is felt and quotations are firm. We quote: Black, 1 in. pipe, $4.37; galvanized, 1 in. pipe, $6.02. See current market quotations for other sizes.

IRON PIPE FITTINGS—We quote: prices as follows: Cast iron elbows, tees, crosses, etc., 67 1-2 per cent.; cast iron plugs and bushings, 67 1-2 per cent.; flange unions, 65 per cent.; nipples, 75 and 5 per cent.; iron cocks, 60 per cent.; Canadian malleable, 35 per cent.; American malleable, 25 per cent.; malleable unions, 65 per cent.; malleable bushings and plugs, 60 and 10 per cent.; C. I. ceiling plates, plain or N. P., 70 per cent.; C. I. floor, 80 per cent.; hookplates, 65 per cent.; expansion plates, 65 per cent.; headers or branch tees, 65 1-2 per cent.; ring hangers, black or galvanized, 70 per cent., American list.

GALVANIZED IRON RANGE BOILERS—We quote: 12 gallon capacity, standard, $4.50; extra heavy, $6.50; 18 gallon, standard, $4.75; extra heavy, $6.75; 24 gallon, standard, $4.75; extra heavy, $6.75; 30 gallon, standard, $4.75; extra heavy, $7.50; 35 gallon, standard, $5.75; extra heavy, $8.50; 40 gallon, standard, $6.75; 40 gallon, extra heavy, $9.50; 52 gallon, $11; extra heavy, $14; 66 gallon, standard, $18; extra heavy, $20; 82 gallon, standard, $21; extra heavy, $24; 100 gallon, standard, $29; extra heavy, $34; 120 gallon, standard, $34; extra heavy, $40; 144 gallon, standard, $47; extra heavy, $55. The discount on copper and range boilers continues at 15 per cent.

RADIATORS—Trade continues very good with an increasing demand as buildings in course of erection near completion. We quote: Hot water, 50 and 2 1-2 per cent.; steam, 50 and 5 per cent.; wall radiators, 50 per cent.

SOLDER—Prices are unchanged. We quote: Bar solder, half-and-half, guaranteed, 24c. to 25c.; wiping, 22c.

ENAMELWARE—We quote as follows: Plate E1, 5 feet, first quality, $20.65, special $18.65; plate E11, 5 feet, first quality, $19.15, special $17.15; plate E21, 5 feet, first quality, $19.15, special $17.15; plate E35, 5 feet, first quality, $24.65, special $22.40. Fittings extra.

THE WINNIPEG PLUMBERS.

The Winnipeg plumbers are still on strike and there does not appear to be any amicable settlement in view. The master plumbers say it is impossible to grant the increase asked by the journeymen, as they have given figures on their contracts for the season, the labor cost of which was based upon the existing wages at the time the contracts were made. The plumbers on the other hand are determined to hold out. Outside guidance is likely to be brought in by the striking plumbers if an agreement is not reached speedily.

OFF FOR SASKATOON.

A. H. Richardson, formerly secretary of the John Ritchie Co., plumbers and steamfitters, Toronto, but for the past few months traveling representative for the Dominion Radiator Co., has resigned his position and left this week with his family for Saskatoon, Sask., where he expects to locate in the plumbing business. Mr. Richardson is favorably known to the trade in Ontario and his many friends will hope to hear of his success in the Great West.

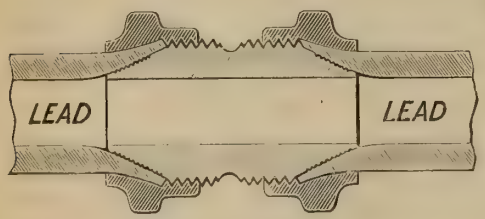
MONARCH BRASS EXPANDING.

W. H. Meredith, formerly provincial secretary of the Ontario Master Plumbers' Association and now traveling representative of the Monarch Brass Co., Toronto, and Port Colborne, left Toronto last Thursday on a trip to the Pacific Coast on behalf of his firm. Mr. Meredith will call at Port Arthur, Winnipeg and other points on his way west and regrets exceedingly his inability to attend the National convention

to be held at Ottawa on August 7, 8 and 9, and a Canadian master plumbers' convention without Mr. Meredith will be something of an oddity—about as odd as the story of Thompson's mare swimming across the river to get a drink.

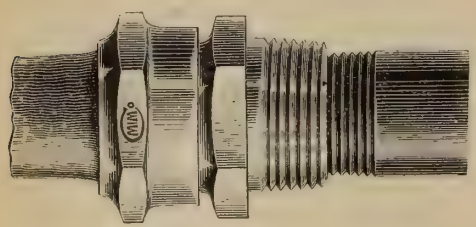
The Monarch Brass Co. are preparing plans for a large extension to their plant, made necessary by their expanding trade. Mr. Meredith will return from the west to take up his work in Ontario again about the end of August.

TECUMSEH HOUSE CONTRACT.



Taylor-Forbes Co. have secured the order for radiators for the Tecumseh House, London. This is the largest job west of Toronto, let this year. Smith Bros., London, are the contractors.

TO PURCHASE WATERWORKS.



The council of Magog, Que., will submit a by-law to raise $30,000 to purchase the waterworks plant in that town.

SOLDERLESS COUPLINGS.

Mimco couplings require no solder, no heat, furnace or washers. They are made for all classes of work—brass to lead, iron to lead, or lead to lead—are

Solderless Coupling.

Solderless Coupling.

all easily applied and for a hurry call are a great convenience. They are made by the Modern Improvements Manufacturing Co., of 466 17th street, Borough of Brooklyn, New York, who guarantee them to perform satisfactorily every function credited to them. The three accompanying cuts show the connections.

TESTING A HEATING SYSTEM.

Demonstrating a heating system may be a new idea in securing more trade for the heating contractor. A contractor who does plumbing work has evolved a scheme whereby he thinks a demonstrating system can be made to pay. His private office will be supplied by indirect radiation and the air passing over will be propelled by a fan. To illustrate the advantages of indirect heating he will then have the room filled with tobacco or some other smoke, and by turning on the fan will show how quickly the foul air can be removed. The reason for trying this idea is that he

SAMUEL LEWIS,
SOLE AGENT,
126 Pearl Street,
NEW YORK, N. Y.

Flexible Auger.

spent considerable money about two years ago fitting up his plumbing showroom and has found that it paid wonderfully well.

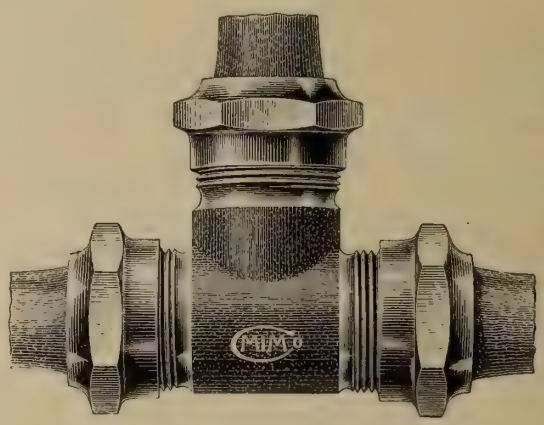
FLEXIBLE AUGERS.

Wrigley's patent flexible augers have but lately come on the market, although they have been patented for some years. They carry fifty feet of flexible shaft and can be put right down through a closet bowl and on through traps and pipes out to the main sewer. They have been used and are well recommended by a large number of prominent plumbers in the United States, and public officials, engineers, etc. Samuel Lewis, of 126 Pearl street, New York, is selling agent for the United States and Canada.

CYRILLE WILHELMY'S DEATH.

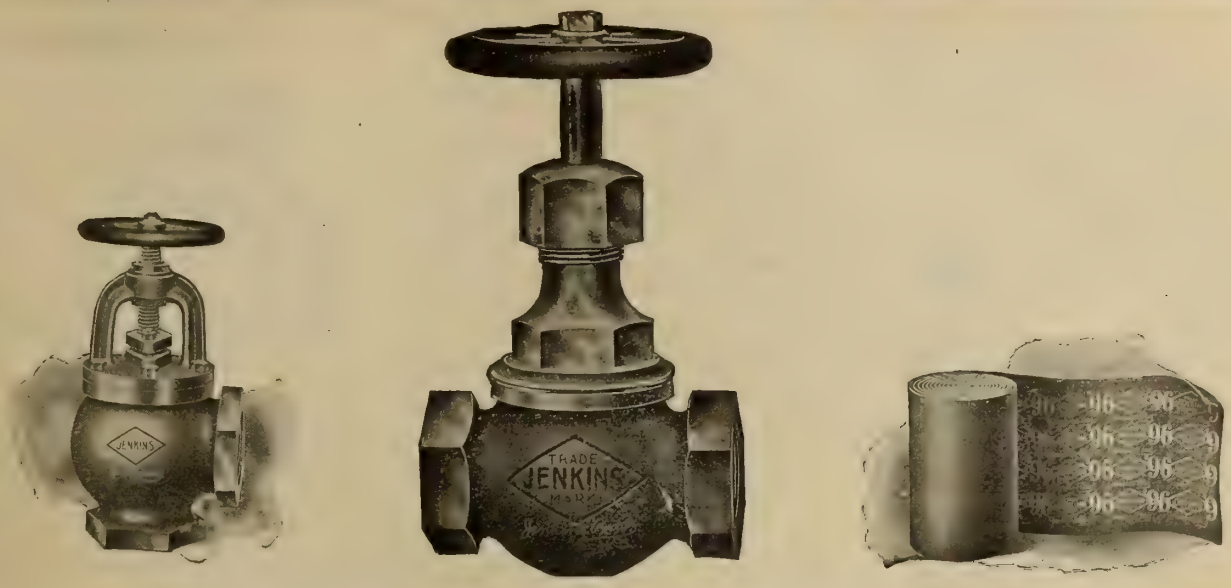
The sudden death of Cyrille Wilhelmy, of Peterborough, plumber and electrical supply dealer, occurred Tuesday at St. Joseph's Hospital. The late Mr. Wilhelmy went to Peterborough from Montreal about eight years ago. He was first engaged at the Canadian General Electric works, and about five years ago went into business for himself. He was forty years of age.

A NOISELESS EXHAUST PIPE.



A very simple muffler for a gas engine has been built in England. The exhaust pipe is split for a distance of about 7 feet, and the split end opened by bending the halves apart until the opening of the slot about equals the diameter of the pipe. The puff of the exhaust then spreads out like a fan, and the discharge into the air takes place much more gradually than would be the case from the plain pipe. The result is said to be effective in reducing the sharp sound of the exhaust, the effect being somewhat dependent upon the flare given the pipe. The length of the pipe is another item to be considered, a greater length being of course required for a large engine than for a smaller one.

The James E. Smart Manufacturing Co., Brockville, have been awarded the contract for warming and ventilating the high school at Port Elgin, using the Kelsey system.



KNOW THE MATERIAL YOU HANDLE.

Sometimes a glance of the eye will tell an intelligent purchaser why one axe is worth $1 and another one 50 cents; not always. Then it is up to the salesman to know just why and to be able to explain. In order to do this he must know something about the different kinds of iron, their properties and proper use and their relative strength and wearing qualities under given conditions. For instance, he should be able to tell just why the new line of steel ranges has to cost more than the iron ones of another make and why they are worth more; also should bear in mind the fact that there are kinds of steel that, while they might cost more, would be worthless in a range than iron.

It is no longer enough for the salesman to know the name of the metal his goods are made of—that is not so much what the customer wants to know as whether the material will wear best in that place and if it is sufficiently superior to justify the difference in price. Be prepared to help your customers in their selection if they ask you to. Some men may want an article for a very

THE

"Standard" GUARANTEE

"Standard" Porcelain Enameled Ware is easy to sell because housewives and house owners know of the "Standard" *Guarantee* and of the Superior Sanitary construction and greater durability of fixtures bearing the "Standard" "Green and Gold" Label. Advertising has impressed the public with the desirability of "Standard" Appliances.

"Standard" Porcelain Enameled Roll Rim Slop Sink with 15-inch Porcelain Enameled Back, on Trap "Standard" with Cleanout and 2-inch Nickel-Plated Vent Connection to wall, Nickel-Plated Strainer, Concealed Galvanized Air Chambers, and Nickel-Plated Fuller Adjustable Flange Bibbs.

Write at once for our Catalogue, "MODERN SANITARY APPLIANCES." Keep it on your table.

Standard Sanitary Mfg. Co.

PITTSBURGH, U. S. A.

short time only and will therefore want the very cheapest that will do the business. Others want a permanent investment and the best value for their money. Not long ago the writer heard a young man who had entered a hardware store rather hurriedly say: "I want the cheapest tin bucket you have got; some-

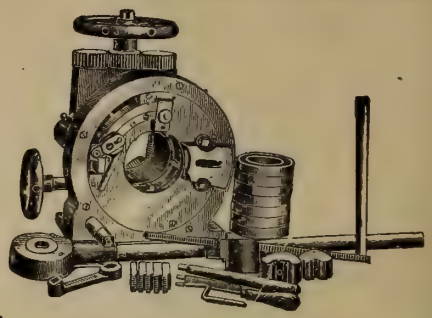
Why will this man fly off in a rage when approached on the subject of advertising?

But when he gets a free reading notice it affects him like this.

thing that will do to water a horse with once and then throw away."

"Here" said the salesman, handing it out, "is one that I can almost guarantee to last but once."

That man was shipping stock on the train. The instance is given to illustrate the legitimate call there may be for all grades of goods. The salesman is in a store where there is a good buyer if he is always able to meet these varying demands; he is himself wise if able to tell why the grades are different and how much they differ in real value; still it is a sort of wisdom he will have if he is the kind of salesman he ought to be. Frequently too, a manufactured article made of one material is satisfactory for one place and not for another because of some chemical action. An old maple-sugar maker claims to prefer the ordinary galvanized pan for boiling sap. Later when caught in the act of purchasing a copper pan at a higher price he explained his seeming change of mind with this statement:



"The old pan was what I wanted for sap only. Now I have added a cider-mill to my establishment in order to get some good of my investment in the Fall as well as Spring, and want to boil cider. The acid of the hot cider would soon attack the old pan; I have to use copper now."

Another instance where some knowledge of the properties of different metals on the part of the salesman may save some customer a serious loss, disappointment and dissatisfaction. Not every clerk knows that lead paint should never be applied to a metal roof, but the sooner he finds it out the less risk he will take of being called upon to face a wrathful ex-customer.

Be prepared, then to advise the customer who wants advice with real intelligence or don't advise at all, remembering always that even cold, inanimate iron may, in its various forms have as many characteristics that have to be humored as a trick mule at the circus.

By carefully studying up some of these details that lie just a little outside of his own business, but that none the less lie back of it, the hardware dealer can not only do a great deal more in pleasing his customers, but will soon acquire a reputation, both as buyer for his own establishment and salesman to his customers that will of itself prove of quite important commercial value.—Hardware.

A Certain Sense of Satisfaction

goes with every MERRELL PORTABLE HAND MACHINE, PIPE THREADING and CUTTING MACHINE. We build them that way.

For doing ALL kinds of threading—under ALL conditions—labor trouble and faulty material included—where speed, durability and ease of control count for something, our word to you is to investigate the MERRELL.

Whether it be stationary or portable—hand or power driven—30 DAYS FREE TRIAL must prove conclusively that your choice should be the MERRELL.

This Portable Hand Machine has encased gears, MERRELL standard quick opening and closing die-head, and the latest improved Cutting-off Knife.

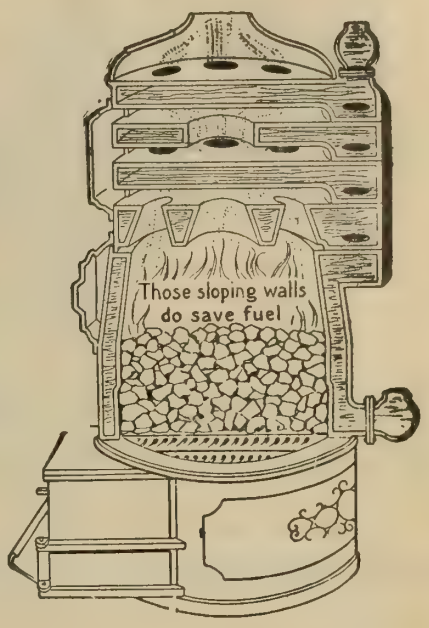
Another powerful selling-help is the way we make those OXFORD BOILER Grate-Bars

The grate bars in an Oxford Hot Water Boiler aren't made triangular and hollow just because that's a different shape from the grate bars in every other boiler.

They are triangular because that's the shape that gives most strength for the weight and most fire-surface for the right burning of any coal.



They're hollow so the air can get through at every part of all the fire the whole time.

Both ideas to make less fuel do more house-heating—to save the money of the man who owns the boiler—to keep the buyer pleased with the boiler and with the dealer he bought it from.

And what a selling-point that fuel-saving is? You won't ever know how easy it is to sell a **GOOD** boiler until you figure the Oxford Hot Water Boiler as the only boiler you want to put in any job.

It takes a **LIVE** dealer to find that out. What reason have you for not asking us to make it clear to you?

That's why we wish you'd write and ask us about our special 1906 proposition. Yes, of course a postcard will do to ask on.

The Gurney Foundry Co., Limited

We also manufacture Cast Iron Stoves and Ranges, Steel Plate Ranges, Gas Stoves and Heaters, Hotel Ranges and complete Hotel Kitchen Outfits, Warm Air Furnaces and all kinds of Cooking and Heating Apparatus, Plumbers' Supplies.

BE BEYOND COMPETITION—

USE UNITED BRASS GOODS

Are you "meeting competition" by doing just what the other fellow is doing; by joining in a mad scramble for cheap brass goods and cheap jobs?

BE DIFFERENT—USE UNITED BRASS GOODS

The man who does the best plumbing has no competitors. The way to do the best plumbing is to use United Brass Goods. Your customers want good plumbing and will pay for it if they know where to get it. UNITED BRASS GOODS never disappoint and they always give perfect service. They make pleased patrons and bring new jobs to the plumber. The job that is done with UNITED goods is finished. There is no worry and no repairs to make. Put yourself beyond the reach of competition by using UNITED Brass Goods.

They Please

When a person enters your shop and says: "Do you keep the Daisy Boiler?" you want to be prepared to say "Yes!"

The fact that steamfitters, who have no interest at stake (except that of doing a satisfactory job) recommend

Improved Daisy Hot-Water Boilers

shows conclusively that this famous boiler has friends on all sides—merit-won friends, too

Every Daisy Boiler is guaranteed.

Mueller Water Pressure Regulators

High pressure at faucets is conducive to unnecessary or high water rents, as more water is delivered than is wanted. With this regulator the pressure is reduced at faucets, waste is diminished and water rents correspondingly lessened.

CURRENT MARKET QUOTATIONS.

July 28, 1906.

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate.

It Won't Cost You Anything

to know that Paterson's Wire Edged Ready Roofing is made from Pure Wool Felt saturated with Refined Coal Tar, and the different plies cemented together with the highest grade of Bitumen. Our Roofing contains nothing that will evaporate at less than 300° Fahrenheit, and that's why it lasts so long.

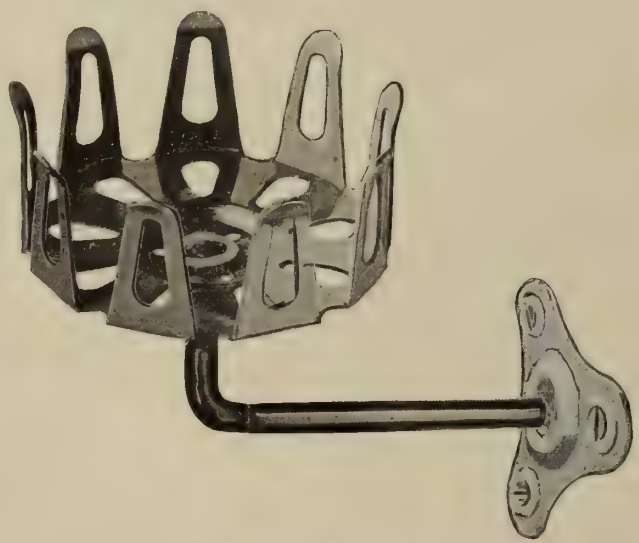
Screw Cabinets

Saves Time—Nothing is more annoying to a customer than to have to wait ten or fifteen minutes while a clerk searches his stock for a certain size or style of a screw or bolt. Get a reputation for neatness and quickness. It will be worth hundreds of dollars to you.

Saves Space—Few hardwaremen have more space than they need. A screw case enables you to keep all your small articles together and no space is wasted. The case we illustrate contains 74 Bennett patent steel drawers which can be divided into 150 compartments.

Saves Your Stock—This case is made with a steel back, which keeps out all dust. If you have a screw case there will be no danger of some day stumbling on a box of screws in some corner which you did not know you had.



This case which we illustrate is so well made it will last a life time. It is as necessary for your screws and bolts and other small lines as a desk is for your papers or a library for your books.

Size of case 26½ inches wide, 40 inches high, 11 inches deep, all exposed wood in oak in either rich antique or golden oak finish.

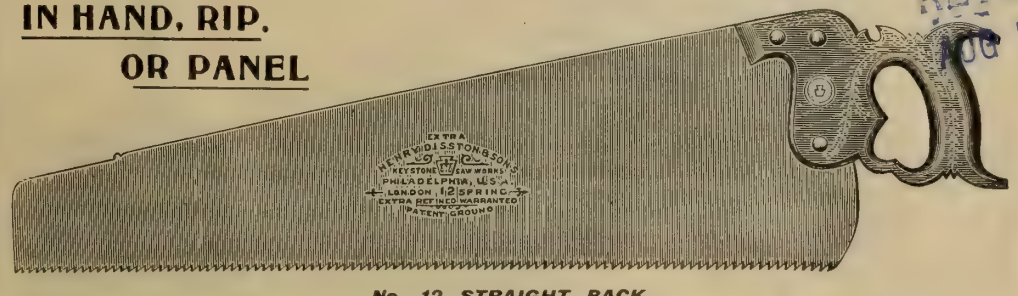
page 34

If anything is sure in this world, it is that **DISSTON'S SAWS** will sell, and sell at a price that will please your customers and leave you a good generous margin for yourself.

THERE'S A REASON FOR IT

Disston's Saws have been known to all up-to-date dealers for many years, as the highest pinnacle in saw manufacturing. They are the standard by which all others are judged.



It has often occured to us, that likely you have asked the question, why it is necessary to advertise a well-known article so often to keep it before the public. The fact is, no matter how good the article is, if some dealers are not continually reminded of it, they will be persuaded to buy a line that they have not tried, and which gives very indifferent satisfaction.

If you've never tried **DISSTON'S SAWS**, send us a sample order.

No man too poor to buy Disston's Saws

No man rich enough to buy better

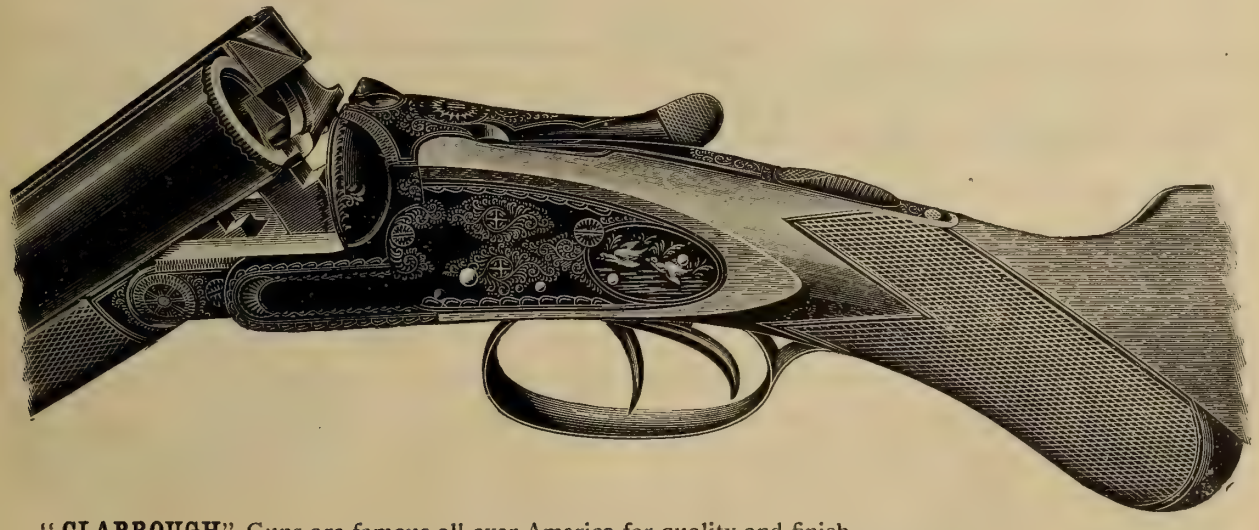
Caverhill Learmont & Co

MONTREAL AND WINNIPEG



Do You Require Some Low-Priced Guns for Your Trade?

You probably do, and are interested in buying those that offer the best value for the money, and which you can recommend as reliable.

Our **No. 0752 BELGIAN** Double Barrel Shot Gun is such an article. We have handled the same gun for several years past, and the quality has been maintained always at the same standard. We have not had any of them returned on account of failure in any part. Moreover, we can sell you this gun so that you can retail it at a good profit at **$7.50**, and it will sell readily at **$8.50**. We have it in **10, 12** and **16 ge.**

May we not send you a few of them in your next order ?

"**CLABROUGH**" Guns are famous all over America for quality and finish.

No. 10259 is a moderate-priced English Gun, intended to retail at about **$40.00**. It is made of the finest quality of wrought materials by experienced workmen. The barrels are wrought steel, tests of which show it to possess extraordinary resisting power and tensile strength. The boring and choking are done on the most modern principles for close shooting and hard hitting.

We have still better grades of "**CLABROUGH**" Guns.

Our "**Sporting and Fall Goods**" catalogue shows guns to retail at as high a price as **$165.00.**

Is it not best to buy where you have the variety to select from?

GENERAL HARDWARE AND METALS

Air is the Steamfitters' Greatest Enemy

WHY NOT FIGHT IT WITH THE BEST AND MOST EFFICIENT WEAPONS?

Get ***all*** the air out of your steam jobs by using the Norwall Automatic Air Valve. This is the most sensitive Air Valve made, and will open for the smallest pocket of air in the radiator. It gives you the use of all the heating surface. No cold loops. No expansion part to buckle out of shape. No adjnsting pin. Automatic in every respect. Cannot be tampered with, yet easily cleaned.

NORWALL AUTOMATIC AIR VALVE

ALL METAL

GET THE AIR OUT AND KEEP IT OUT

NORWALL AUTOMATIC AIR AND VACUUM VALVE

ALL METAL

No battle was ever won by driving the eneny out of its position and then falling back to allow it to return. Yet this is what happens in your steam jobs. Use the Norwall Air and Vacuum Valves and ***keep*** the enemy driven out. This valve vents every loop in the radiator, but prevents the return of air into the system, This is done all automatically and guaranteed by us.

HERE ARE THE RESULTS

WITHOUT NORWALL VACUUM VALVES

1. Air forms a pressure of 15 pounds to the square inch on the water in the boiler and prevents the generation of steam till it isheated to 212°, whereas it would boil at 98° in a vacuum.

2. Air fills a steam job and must be forced out before heat is obtained.

3. Air sneaks back into the system and kills the steam.

4. Air necessitates burning enough fuel to keep up at least one pound of pressure or water 215° hot.

WITH NORWALL VACUUM VALVES

1. Water will boil at temperatures less than 212°, so that you can have **steam within the radiators to suit the weather** (as with hot water).

2. There being no air to force out when heat is wanted, the **results are immediate** and you can heat the whole system in ten minutes.

3. The air cannot get back to kill the steam and you can **hold heat in the radiators** for hours after the fire is banked.

4. Water will boil and steam generate at 160° or less, which means that **you will save the fuel** needed to heat to 215° when 160° is enough.

THERE ARE MANY OTHER ADVANTAGES. SEND FOR FULL PARTICULARS.

MR. HARDWAREMAN, IT'S UP TO YOU !

SEE THE SIGN ?

SEE THE LABELS ?

What One Good Live Hustling Agent is Doing With Pedlar's "Oshawa" Shingle

Mr. Vrooman only started to handle Metal Shingles late last year (1905), but before taking the sale of this class of goods up at all, he made himself perfectly familiar with all styles and classes that were being offered on the Canadian market, with the result that he applied for and was given the agency for The Pedlar People's Goods. Mr. Vrooman argued in this way :— "Now, if I am to work up a good trade in the Metal Shingle business, I must get the agency for the best that's manufactured, because a roof, of necessity, must be good, or it's no use ; besides, if I don't get something that my customers can recommend to their friends, I shall do very little or no business."

His arguments were well taken, as the picture will show, because within six months (in the winter) he sold thirteen barn and house roofs, and the illustration shows his thirteen customers taking the goods home. They were applied, in the majority of cases, by the customers themselves, or their carpenters. The goods in this car load of 30,000 lbs. were mostly our 28 gauge "Oshawa" Galvanized Shingle No. 600 E, and the shipment called for 32,000 square feet, or enough to cover 13 barns, each of, say 25 squares. In speaking of this delivery, the North Ontario "Times" of March 22, 1906, says :

"Tuesday morning farmers from all parts of Brock Township met at the station and loaded their wagons with the famous "Oshawa" steel shingles. Mr. J. H. E. Vrooman, the agent for the Pedlar Co'y, of Oshawa, entertaining them to a dinner at the Brock House. After enjoying a very sumptous and social feast the wagons were lined up on River Street, when a photograph was taken by Mr. S. L. Wright, of Uxbridge. This was the largest delivery of the kind ever held in Sunderland, and created quite a sensation, being witnessed by hundreds of people. As this make of Shingle has been much used in this township since the first year of its existence goes to show that the "Oshawa" steel shingles must be the choice of the people and satisfactory to the builder. The Brock farmer knows what to use. They have the best of buildings. Mr. J. Bagshaw, among the others, celebrated the occasion by sitting in with the other boys and having his photo taken. All his buildings are covered with "Oshawa" shingles, and he could not say too much in their favor, having put them on himself. Although the winter has been dull for builders, Mr. Vrooman reports having done a large business in the sale of the "Oshawa" steel shingles, and the outlook for further business is good, it being hard to keep a good thing down."

The fact that so many intelligent people, in one loality, used "Oshawa" Galvanized Shingle (locked on four sides), should be a very strong argument in favor of YOUR selling this kind of roof covering. There is none better than the "Oshawa," and some of very little use at all

IN THE JOY OF LIVING

It is a long day for the Accountant who uses the ancient system of bookkeeping by bound books.

The introduction of labor-saving machinery has done a heap towards increasing the possibilities in the joy of living.

The eight-hour work day is the result of these modern methods, and it hasn't decreased the earning power of any man or body of men, nor has it increased the price of the goods which they assist in manufacturing.

The introduction of modern methods of accountancy reduces the working hours of the accountant, and saves the merchant at least fifty per cent. in clerical service value. Also it facilitates business, avoids chance of error, and makes it easy for the merchant to know at any time just how his outstanding accounts are, and what business he has done within a certain time.

Using bound books to record daily, weekly, monthly or yearly transactions in business, is using obsolete machinery; in a day, too, when competition can only be met with up-to-date labor-saving methods.

In accountancy this all means that the Copeland-Chatterson Systems must be employed if you wish to assure success in the handling of your business.

The Copeland-Chatterson Monthly-Account System is a condensed and distilled method of handling bookkeeping in retail business—one book does the work of three, and without extra effort on the part of the accountant.

ASBESTOS SAD IRONS

AN IRON FOR EVERY PURPOSE

Window Display Contest

Our 1905 Window Display Contest was hardly over before dealers began to ask when another "Asbestos" contest would be conducted.

Since our last contest met with such hearty approval, we decided to hold another during the coming Fall. We know how to do it better now, and dealers who compete this year will note a decided improvement in the Display Advertising Matter that we furnish.

In this connection we desire to call your special attention to our Free Display Stand Proposition. The stand is pressed from sheet steel and coated with green enamel. The trade-mark—Asbestos—is printed on the stand in silver and red. Any dealer can make a handsome window display of Asbestos Sad Irons by using the "Asbestos" Display Stand as a center piece.

The stand is furnished free with Assortment No. 5 at regular prices. You should have the assortment anyway, but it is almost indispensable in view of the Window Display Contest.

One of our rules for awarding prizes will be this: "Preference in awarding prizes will be given to dealers who display the most styles of Asbestos Sad Irons, other things being equal."

By having the No. 5 Assortment and the Display Stand you will be well-prepared to compete in the Window Display Contest. Details of the Contest will be sent to the trade in September.

Order "Asbestos" Assortment No. 5 from your jobber to-day.

page 45
of
Ask

HEATING MADE EASY

by using our latest device in hot-air heating.

The Down Draft Principle

By this principle the fire burns from the top and the pressure of the cold air down the Down Draft Pipe does not allow the gases and soot to escape up the chimney as is the case with any ordinary furnace, but, instead, it burns these gases and gains thereby the additional heat derived from these gases, which is at least 20%.

SPECIAL FEATURES

The Down Draft Principle.

Cast Iron Dome or Combustion Chamber.

Large Feed Door.

Large Water Pan.

Large Ash Pit.

Heavy Sectional Fire Pots.

Heavy Triangular Grate Bars.

Dust Flue Connection.

Regulated by a Regulating Cap from the floor of the Living Room.

Made in Five Sizes.

The only furnace that will burn Soft Coal, Souris or Galt Coal satisfactorily and economically.

ADVERTISING RULES

There is no better advertising medium made than our

COLORED RULES with GILT PRINTING

We furnish them in great variety of colors, finish, scales, grades and prices. A RULE does not go into the waste basket—It is KEPT FOR YEARS.

THE RULE MAKERS **WESTCOTT-JEWELL CO.**

OFFICE AND FACTORY: ***SENECA FALLS, N. Y.***

WHAT WOULD YOU GIVE

for a stove trade so thoroughly solid that the mere forwarding of an order would be a signal for sales to commence.

You would give a whole lot, wouldn't you?

Well, all you have to give is **attention** to what we have to say **right here and now.** The

Empire Queen Range

is made to **work**—both for the Dealer and the Householder.

It works for the Dealer in that it creates enthusiasm in the buyer's mind. It works for the Householder in that it bakes as the makers say it bakes—**Perfectly.**

That Oven you see there is constructed on the most modern principles. That Firebox is correctly proportioned. That Ash-pan never "overflows."

Symmetrical, attractive, easy to keep clean—yes, tell us to send the **Booklet** describing this range to you **at once.**

PUT A

CHANCELLOR RANGE

UP FRONT

AND SEE IT SELL ITSELF?

If there ever was a range that did its own talking, it's the new Oxford Chancellor Range—burns wood or coal.

'Tisn't merely the extremely handsome appearance of these ranges, though that point does help a lot. It's their visible value—the design of them, the wor--saving ideas that are in them, the common sense of their design.

The woman who sees an

Oxford Chancellor

is half-way towards buying it. When she examines it, she goes the rest of the way.

You do a quarter of the talking, and the range will do the rest.

Isn't that the kind of a steel plate range you ought to have on your floor right now?

MAY WE SEND YOU A CATALOG AND A PROPOSITION?

THE GURNEY FOUNDRY COMPANY

LIMITED

TORONTO, HAMILTON, WINNIPEG, VANCOUVER,

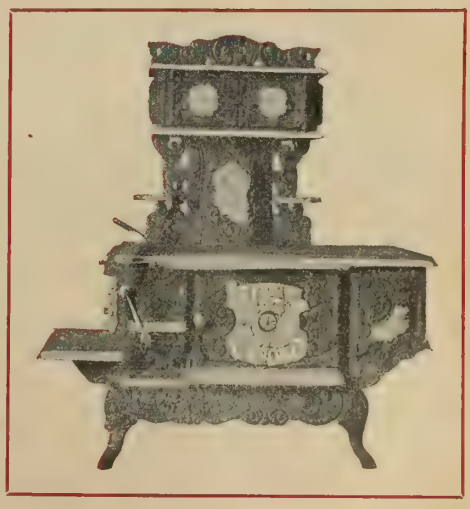
The Gurney Massey Co., Limited, - Montreal, Que.
The Gurney Standard Metal Co., Limited, Calgary, Alta.

WE also manufacture Steel Plate Ranges, Gas Stoves, ranges and Heaters, Hotel Ranges and a complete Hotel Kitchen Outfits, Hot Water and Steam Boilers and Radiators, Warm Air Furnaces and all kinds of cooking and heating apparatus, Plumbers' Supplies.

WHEN SHE SAYS SHOW ME AN

Imperial Oxford

--GOT YOUR ANSWER READY?

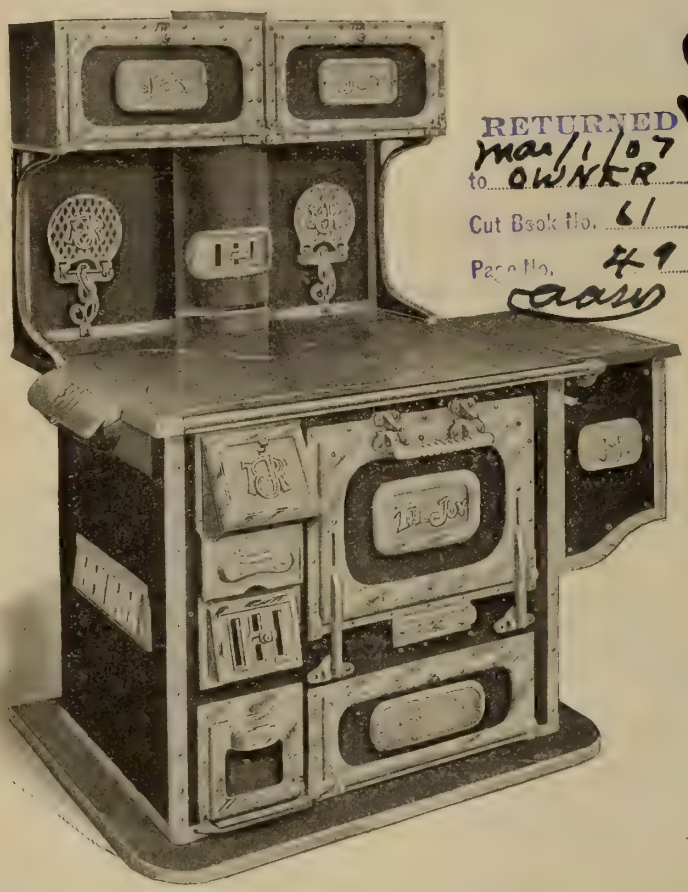


She—and that means every woman in Canada who sees advertising—is going to say that to live dealers this season as she never said it before—

She is going to say it so loud that the stove trade will hear mighty little of any other range's name—

We know that much for sure. We have taken care to make sure of it—

We mean to sell every really high-grade range that Canada buys this year. Advertising will do it—you will help to do it, if you want to get the good and the profit that advertising will bring you.



But you can't get that good unless you are ready with the answer when she asks to see the Imperial Oxford Range—the range with the oven flue that alone does perfect baking--the range with more selling-points than you'll need to use.

WHEN the demand comes, you want to be able to say—

—Right This Way Please!

The Joy Malleable and Steel Range

RETURNED
mail 1/07
to OWNER
Cut Book No. 61
Page No. 49

This is the range that JOY builds.

Blue steel without paint is what makes the body of the malleable range that JOY builds.

Malleable iron with rivets combine with blue steel in the malleable range that JOY builds.

Flush reservoir, without bolts, you can hang on the right end of the malleable range that JOY builds.

Duplex grates, cogs outside, hold the fire in the box of the malleable range that JOY builds.

Perfect operating oven with drop oven door, pouch feed, high closet, and many things more, combine, Mr. Dealer, to prepare for your floor, the malleable range that JOY builds.

Built to stand use and abuse.

Hot fire in a cold stove or cold water on a hot stove will not crack these malleable tops.

JOY MFG. CO., 32 Humberside, TORONTO

The remarkable success of the

"CROWN HURON" Range

IS NO SECRET. It is due entirely to high quality, beauty in finish and a reasonable price.

No stove dealer of experience can examine the **"Crown Huron"** thoroughly as to material and workmanship and not pronounce it the best he has seen at any price.

It pleases every user.

It is a positive success.

In towns where we have not already placed it, we would like to secure an agent.

If interested in securing the sale of a dependable and profitable Range, suppose you send for book of the **"Huron"** line.

It will be mailed on request.

ALUMINUM OIL HEATERS

Sales Over the Million Mark

When you sell the Aluminum Oil Heater you have made a satisfied customer.

You won't have to send a man out to clean and re-wick it. You will never hear from it afterwards except in words of praise. It will never come back for "repairs or otherwise." It is the Oil Heater for your trade because it is the only Oil Heater equipped with a **Perfect Safety Burner.**

The Burner is the very soul of the Oil Heater. Without a Perfect Burner, there is smoke, disagreeable odor and dissatisfaction. Every Aluminum Oil Heater is equipped with our Grand Safety Burner. It gives perfect combustion with perfect circulation. No smoke, no odor, absolutely safe, and a furnace for heat.

It radiates heat like a base burner, from the bottom and sides as well as the top, and all because of our **Great Safety Burner.** Note construction as shown above.

A—Flame spreader. B—Air space outside of wick tube. C—Air space inside of wick tube. D—Wick. E—Outside casing to burner. F—Air space between fount and outer casing. G—Fount for oil. H—Feed pipe. I—Shield resting on top of fount with air space underneath.

Isn't the Aluminum Oil Heater the only oil heater for your trade? Dare you sell any other?

Doesn't an oil heater that sells, stays sold, and sells others, appeal to you?

Let us have your order promptly. The demand is big and you don't want to disappoint your trade. We make the prices that keep you smiling.

OVEN.– The oven is large and square, made in three sizes with drop oven door which forms an oven shelf when open. The inside oven shelf as well as the oven door is aluminized, making a bright, clean interior. The construction is such that it is impossible for ashes to leak through into the oven.

FIRE BOX.—The construction of the fire box is such that the parts which are exposed to the fire are made exceptionally strong and simple, and the duplex grates can be taken out and replaced through the side door without disturbing the rest of the fire box.

"**AERATED.**"—This Range, as is the case with all Souvenirs, is fitted with the celebrated "**AERATED OVEN**" by which fresh air is constantly being heated and admitted into the oven, carrying all impurities up the chimney. This particular "**AERATED**" feature always keeps the interior of the oven sweet and wholesome.

VANCOUVER, B.C.—White & Bindon.

Here are some reasons why a *Marlin* Model 1897 .22 caliber repeating rifle is the most satisfactory small bore repeater you can possibly own.

In finish, workmanship and balance this rifle is unsurpassed. The *Marlin* quality of steel drop-forgings constitutes all the working parts. Every single piece and screw and pin in this gun is made with care to a standard pattern so that all parts are positively interchangeable. The barrel of excellent steel is carefully bored and the deep rifling gives absolute accuracy and great wearing quality. This and other *Marlin* rifles are the only repeating rifles to which telescopes can be attached because the top of the breech is solid and the empty shell is ejected from the side.

For all sorts of small game this rifle is recommended, and with the long-rifle cartridge it is very deadly to hawks, owls, eagles, geese, ducks and any other shy birds which are hard to approach and require a hard blow to kill.

As a target rifle at long or short ranges, with or without a telescope, the *Marlin* Model 1897 .22 caliber repeating rifle is the guaranteed equal of any in the world.

TO ALL DEALERS HANDLING FIREARMS:

The above is one of seven advertisements to be used by the Marlin Company in their 1906 advertising campaign. These advertisements will be inserted in a list of magazines selected for their QUALITY, known to be bought and read by a class of people financially able to buy Marlin repeaters and having a total guaranteed circulation per month of 5,000,000. Estimating five readers to a magazine, this will give a total, for seven months, of 25,000,000.

In addition, Marlin goods are advertised in farm papers, hardware papers, sporting goods papers and in many miscellaneous publications.

In our advertisements we ask for six cents in postage stamps. This means that a person must furnish paper and envelope, a two-cent stamp for mailing, include six cents and take the time and trouble necessary to write us a letter. Our object is to cut out catalog collectors young boys and girls and people who are not interested enough to invest ten cents and the time and trouble necessary.

We reason that if a person is interested enough to do this, it is worth our while to go after him seriously and earnestly, and on all inquirers answering these advertisements and spending ten cents on us, we spend more than twenty cents.

We send each and every one a 136-page catalog illustrated with hundreds of engravings, having a beautiful cover in colors and containing a large amount of general information interesting and instructive to all shooters whether they use Marlin repeaters or not.

We send also a copy of our 96-page illustrated testimonial book and a personal letter in which we refer them to the nearest dealer that we know of who carries a good stock of Marlin goods and is enterprising enough to follow up an inquirer and try to sell the man a Marlin repeater.

We also send to the dealer the name and address of the party inquiring, thereby putting the dealer and the consumer in direct communication one with the other. We also follow up the customer and urge him to buy through the dealer.

Our advertising campaign each year brings us thousands of inquiries and makes us a great deal of expense and trouble, as you can readily see, but we believe that it pays us and it will pay you if you will take part in it.

If you are interested please write us and give us full particulars as to exactly where you stand on Marlin goods. If you are with us we want to know it and send you some of this business. Write us to-day and tell us whether you want to be on our dealers' list or not.

There are many other valuable ***Marlin*** *ideas included in every* ***Marlin*** *gun. Send six cents in stamps for our handsome catalog, which explains all and contains much other valuable information.*

WESTERN CANADA RETAIL HARDWARE CONVENTION

On Wednesday, July 25, the Retail Hardware and Stove Dealers' Association of Western Canada met in Winnipeg, in their annual midsummer convention. For a Summer meeting there was a large attendance of members, some having come from as far west as Calgary and the vicinity of Edmonton. Western hardwaremen are business men of a high type of ability, and they waste little time in preliminaries and formalities. The best possible use was made of the time at the disposal of the members, and in two sessions a number of important topics were thoroughly discussed.

One of the most important topics that came up for discussion was the relation of the Western Hardware Association through the Western Board with the Dominion Retail Merchants' Association, of which Mr. Trowern, of Toronto, is secretary. It was felt that little had yet been accomplished by the affiliation last February and surprise was expressed when Secretary Coulson, of the Western Board, complained that he had received no replies until the day of the convention to a number of letters sent Mr. Trowern on important matters. At one stage of the proceedings it seemed probable that a resolution would be passed in favor of rescinding the arrangement made last February. Finally, however, the question was left in abeyance until the February meeting, when the trade will be more fully represented.

Weston Wrigley, editor of Hardware and Metal, and secretary of the Ontario Retail Hardware Association, was present to convey greetings from the Ontario association. The western hardwaremen were glad to hear from him of the progress of the work in Ontario, and steps were taken toward the formation of a Dominion Retail Hardware Association, to include the trade in the three Prairie Provinces and Ontario.

The Register.

The following hardwaremen registered at the morning session of the convention: W. J. Coleman, Darlingford; J. W. Graham, Carroll; G. S. Hames, Oxbow; Bert Lennox, Winnipeg; George Houston, Cypress River; L. H. Phillip, Cartwright; G. K. Smith, Moose Jaw; Robert Wyatt, Winnipeg; W. W. Rutan, Melfort; Samuel Schwanz, Rocanville; A. J. Falconer, Deloraine; J. J. Barr, Oak River; H. F. Johnstone, Ninga; J. B. Preston, Carnduff; J. Drewe, Calgary, Alta.; Weston Wrigley, secretary Ontario Retail Hardware Association, Toronto; W. A. Templeton, Winnipeg; Fred. Bobb, Portage la Prairie; E. A. Dykes, Winnipeg; J. A. Lindsay, Winnipeg; G. H. Clare, Saskatoon; B. T. Lawrence, Killarney; Wm. M. Gordon, Winnipeg; O. B. Manville, Prince Albert; D. Phillips, Dominion City; A. P. Macdonald, Winnipeg; John Sproat, Hamiota; J. B. Curran, Brandon; R. B. Wilcox, Glenboro; F. R. Munro, Hardware and Metal, Winnipeg; R. W. Morrison, the Commercial, Winnipeg; P. T. Gonlter, Innisfail, Alta.; Oliver Gilmer, Winnipeg.

MORNING SESSION.

President A. J. Falconer opened the proceedings shortly after ten o'clock, pointing out in his opening address that the business of the convention ought to be transacted in a short space of time as no election of officers was to take place. "But," added the president, "association work is never finished." Mr. Falconer gave some well-earned praise for his hard organization work in the vast west, adding that with the local associations which were being formed much of the expense of the work of organization would be eliminated. With one exception the relations of

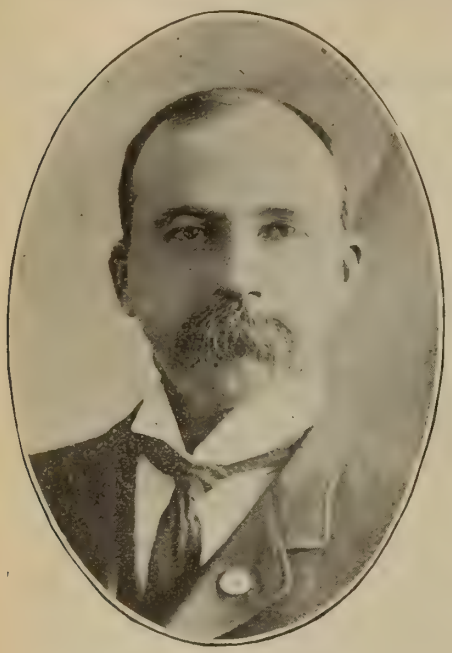
A. J FALCONER, Deloraine.
President.

retailers with jobbers were fairly satisfactory, but owing to the unfair actions of the jobber referred to something had to be done. The president suggested as a remedy the establishment of a buyers' exchange jobbing house, to start which the retailers would have to invest from $300,000 to $400,000. The suggestion, however, was not considered seriously by the delegates, nothing being heard of the co-operative scheme during the balance of the convention. The address was closed by a request to the delegates to frankly bring forward any grievances being suffered under, and loud applause was given the speaker as he sat down.

The reading of the minutes and the adoption of the treasurer's report showing a balance on hand of nearly $300 was followed by a few additional remarks by President Falconer in reference to the clause in the secretary's report (published last week) referring to the affiliation of the association with the Retail Merchants' Association. He contended that a wrong impression existed amongst the trade as a result of false claims made by the Retail Merchants' Association secretary that the Retail Hardware Association had merged itself into the Dominion body. This was not so. His organization had retained its own identity and, so far as he could see, no advantage was to be gained by continuing the affiliation decided upon six months ago. He suggested that if the delegates felt as he did that a motion rescinding the previous action should be adopted at this convention.

Ontario Sends Greetings.

As the executive and special committees had no reports to make, they were asked to bring in something definite, especially regarding mutual fire insurance, at the convention next February.



A communication was read from the executive committee of the Ontario Retail Hardware and Stove Dealers' Association, introducing Weston Wrigley, the secretary of that body, as a fraternal delegate to express the greetings of the trade in Ontario to the members of the Western Canada Association, who had blazed the trail for association work in Canada. Mr. Wrigley was given the privilege of the floor and was greeted enthusiastically when he rose to speak on the request of President Falconer.

The Ontario secretary said the members of the Ontario executive were young in association work and he had been sent to the golden west in order to learn how the progressive westerners did things. The Ontario organization was a mere baby of three months, but it had thrived on the opposition of individuals who felt it their duty to spend money contributed by Ontario grocers, druggists, jewelers, etc., in order to kill the present attempt to organize the hardware and stove trades in Ontario. He was pleased, in view of these circumstances, to be able to report an enrolled membership of about 150 paid up members. Considering that the Western Association had only 175 after being organized a year, and New York had only 280 after four years work, the Ontario Association must be considered a healthy infant. The speaker said that as all the trade read Hardware and Metal, it was unnecessary for him to refer more to the knifing tactics of certain officials of the Dominion Retail Merchants' Association.

Suggestions Made.

Mr. Wrigley suggested that it might be possible for the two associations to work together to mutual advantage. A national organization might even be formed to deal particularly with mutual fire insurance. In one matter at least the Western Association could

help members of the Ontario Association. A Winnipeg jobber was selling nails to consumers, it is said, at Fort William at prices less than retailers in

J. B. CURRAN, Brandon.
First Vice-President.

that town could buy. This unfair competition could be eliminated with the co-operation of the Western Association and probably the Ontario Association could be able to reciprocate on similar matters affecting the welfare of the western trade. He had been told that western jobbers said they were forced to sell to consumers because the eastern houses did so.

In closing, the speaker dwelt upon the necessity of conservative action being taken at the convention. "Act in haste and repent at leisure" was an old truism. The members should be loyal to the association and to themselves. Before believing stories about competitors they should be investigated and every true member would not sit back and "knock," but would heartily do everything possible to make easier and more effective the work of their officers.

Westerner's Reply.

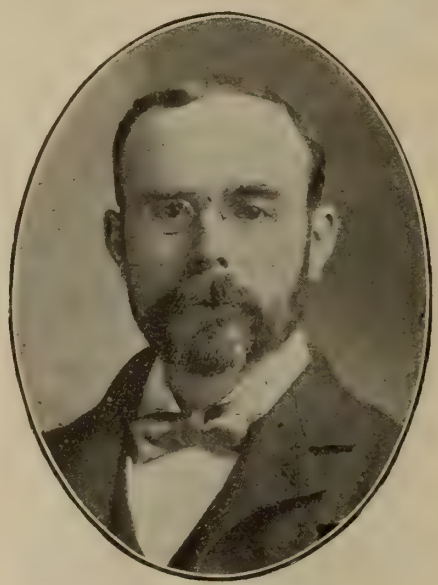
At the conclusion of Mr. Wrigley's speech Fred. Babb, of Portage la Prairie, replied on behalf of the Western Association. He said the western hardwaremen in the association had trouble because hardwaremen were such lunatics as to suspect their competitors of underhand tactics when they had no evidence. A little more mutual confidence would remove all difficulties.

A. P. Macdonald, Winnipeg, was pleased to Welcome Mr. Wrigley, and expressed the hope that steps would be taken towards the organization of a Dominion Retail Hardware Association.

Resolutions Committee.

On motion of G. K. Smith, Moose Jaw it was decided to appoint a resolutions committee to submit a programme for the afternoon meeting. Accordingly a committee was appointed consisting of J. B. Curran, O. B. Manville, G. K. Smith and W. M. Gordon.

AFTERNOON SESSION.



The resolutions committee recommended the following programme for discussion :

1. Resolution in favor of the formation of a Dominion Retail Hardware Association.
2. Resolution referring to wholesale trade selling to consumers.
3. Resolution regarding the Lien Law.
4. Resolution referring to interference by wholesalers and their travelers with retailers' employes.
5. Resolution regarding outstanding indebtedness by members.
6. Curtailing of credit.
7. Reconsideration of the relations of this association with the Retail Merchants' Association of Canada.
8. Criminal code resolution.

On motion it was decided that numbers one and seven would be taken up together.

Jobbers Selling to Consumers.

Moved by W. M. Gordon, Winnipeg, and G. K. Smith, Moose Jaw : That

WM. GORDON, Winnipeg.
Second Vice-President.

in the opinion of the retail hardware dealers of the west the time has arrived when the field of distribution of the two classes—wholesalers and retailers—must be defined and each must take its own and exclusive place in the distribution of merchandise in the hardware line, and that the secretary be instructed to advise the members of the association when wholesale houses sell to others than the trade.

Mr. Gordon said jobbing houses should not sell to consumers, and while none have clean skirts, one Winnipeg jobber in particular was defying the association, and any one could go to the warehouse and get 5c. worth of goods. The association should seek the co-operation of sister associations in dealing with this matter, and the time to act is now.

Mr. Smith asked if the secretary had had any communication with the jobber referred to.

The secretary said he had; that the jobber said he reserved the right of selling to whom he chose.

Mr. Smith brought forward the name of a metal roofing company which sold to consumers. The firm said they wanted to do business through the trade, but would do it anyway.

W. M. Rutan, Melfort, Sask., said customers could get better prices than he could sell at from farmer agents of the same company. A Winnipeg house has sold a consignment of stoves through a Catholic priest to a number of French farmers.

Speaking again, Mr. Smith suggested that such travelers should be forced to pay peddlers' licenses. Mr. Gordon then closed the discussion by urging that the secretary send a letter to members, advising them that certain jobbers were acting unfairly, and asking the members to act as a unit in doing business only with fair houses. The motion carried as amended.

Western Lien Laws.

Moved by J. A. Lindsay, seconded by G. K. Smith : That in the opinion of this association a uniform lien law should exist in Manitoba, Saskatchewan and Alberta, and that in view of the unsatisfactory state of the present lien laws this association should co-operate with all other associations in having necessary amendments made to the present laws, and that Mr. J. E. Thomas, with the mover and seconder of this resolution, be a committee to further the object of this resolution.

J. A. Lindsay, Winnipeg, and G. K. Smith, Moose Jaw, reported that the lien law in Manitoba was practically useless, while in Saskatchewan lawyers had advised that it would be throwing good money after bad to take legal action under present conditions. The motion carried unanimously.

Interference with Employes.

Moved by G. K. Smith, Moose Jaw, and Wm. Gordon, Winnipeg : Whereas we find it a great inconvenience and loss to have our help interfered with by travelers and jobbers, be it resolved, that in the opinion of this meeting the travelers and jobbers should not make

W. A. COULSON, Winnipeg.
Secretary Western Board.

any attempt to induce employes to leave their employers, and that a copy of this resolution be sent to the jobbers and travelers of Winnipeg.

G. K. Smith, Moose Jaw, said that one grievance he had felt was that travelers representing the jobbing houses had, in an underhand manner, interfered

J. E. McROBIE, Winnipeg.
Treasurer Western Board.

with employes he had trained to sell furnaces, etc. This was unfair, and the jobbers should not interfere in this matter. Messrs. Wm. Gordon and A. P. McDonald agreed that the evil existed, and Mr. Smith spoke again and named a specific instance. On motion the matter was left in the hands of the secretary for action.

The Credit Evil.

A resolution referring to the curtailment of credit was fathered by Messrs. H. T. Johnston and B. T. Laurence.

President Falconer told of the experience of Deloraine merchants who agreed last Fall to shut off all credit from November to April. He stated that the plan had worked admirably in Deloraine. He thought it would be well for the secretary to write the members suggesting this plan to them.

The Affiliation Problem.

Resolutions No. 1 and No. 7, advocating the formation of a Dominion Retail Hardware Association, and favoring the rescinding of the affiliation arrangement with the Dominion Association in Toronto, were considered together. Resolution No. 7 was as follows :

That in the opinion of this association, in view of the recent claim of the Dominion Association that we had amalgamated with them, when only affiliation was agreed upon, and in view of the fact that the said affiliation has not advanced the interests of our association in any way : Be it resolved, that we run our own association as previous to February last.

Resolution No. 1, favoring the formation of a Dominion Retail Hardware Association, was as follows : That we, the Retail Hardware and Stove Dealers' Association of Western Canada, take action to form a Dominion Retail Hardware Association, and that the secretary be instructed to take the matter up with the secretary of the Ontario Retail Hardware Association with that object in view; and that a report be submitted to our next meeting.

Interesting Discussion.

A. P. Macdonald favored the organization of a Dominion Retail Hardware Association, and thought some proposals should be made to Mr. Wrigley, secretary of the Ontario Association, who could present them to the Ontario Association at their meeting in September. He thought, however, that it would be unwise to break with the Trowern Association altogether.

William Gordon, Winnipeg, said that he failed to see where any benefit had been derived from the affiliation with the Dominion Retail Merchants' Association. Communications had been repeatedly sent to Mr. Trowern on important matters and no replies had ever been received. Such treatment was discourteous to the western association and western hardwaremen should show what they thought of it. The attempt

J. A. LINDSAY, Winnipeg.
Auditor Western Board.

to coerce the Ontario hardwaremen should also be remembered. He would suggest that Secretary Coulson, of the Retail Merchants' Association of Western Canada, be asked to address the meeting.

Secretary Coulson Speaks.

Mr. Coulson said that, so far as he had been able to discover, the Dominion Board, of which Mr. Trowern had spoken last February, does not exist. "I have written Mr. Trowern some 18 or 20 letters," he continued, "and until to-day I received no reply. The reply to-day came to me personally and not to the association, It is a reply that doesn't say anything.

"At our February meeting you agreed to affiliate through the Western Board with Mr. Trowern's Association, but you did not agree to amalgamate with them or lose your identity. Without any authority the Retail Merchants' Journal, which is the personal property of Mr. Trowern, claimed that amalgamation had taken place and, of course, it was the duty of Mr. McRobie and myself to repudiate this claim through the trade newspapers.

"Mr. Trowern writes me in the letter I received to-day that the reason he did not communicate with us earlier was a desire not to disturb our slumbers. This seems a poor excuse for his neglect to answer any of our letters.

"I would suggest that you ask your Western Board to take steps to release you from the present arrangements with Mr. Trowern's association. Let us attend to our own business through our Western Board and let us be ready to co-operate with all associations in our own way."

Other Delegates Speak.

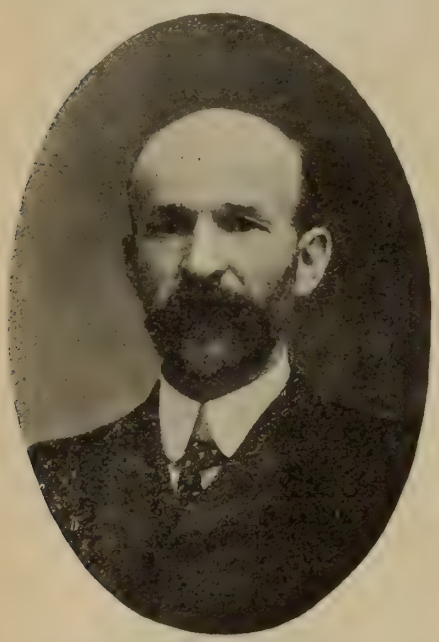
J. A. Lindsay said he was cordially in agreement with the proposal for a Dominion Hardware Association, as he sympathized with every movement which would bring all branches of the trade together. But he did not favor breaking with the Dominion Association, even though that association had shown the western men very scant courtesy.

"There seems to be something mysterious about this Dominion Association," he continued. "It is hard to understand Mr. Trowern's lack of courtesy in this matter, as he must have been under considerable expense and inconvenience in coming to the February meeting. For my part I want more light on the subject, but in the meantime let us send Mr. Wrigley back with a cordial message from us to his association."

Oliver Gilmer—"Who is the Dominion Board ?"

President Falconer—"That is just the question. No one knows."

Weston Wrigley — "The Dominion Board is a body representing different branches of trade. I am sure it is not to blame for the reglect to reply to correspondence from your Western Board. The neglect must be the secre-



G. K. SMITH, Moose Jaw.
Member of Executive Committee.

tary's alone. The board met the Dominion Government some little time ago to ask for certain amendments to the criminal code, and this in itself is

proof that they are alive. What surprises me is that they did not communicate with you or ask your co-operation. In view of their threat against our association on Good Friday it is not at all surprising that we were not asked to join the deputation, although we would have been glad to co-operate."

J. A. Lindsay—"Perhaps the Dominion Association is all right but is made to appear in the wrong through the neglect of its secretary."

J. B. Curran and Oliver Gilmer suggested that the secretary be instructed to hold the per capita assessment due the Dominion Board until after the meeting next February, when the relations of the western associations with the Dominion Association might be fully considered. Mr. Curran depreciated any suggestion that Mr. McRobie should communicate with Mr. Trowern unless the latter made the first advances. The western associations had been rebuffed several times by Mr.

A. P. McDONALD, Winnipeg.
Member of Executive Committee.

Trowern and there would be no sense in inviting another rebuff.

Oliver Gilmer advocated a "divorce" if it could be shown that the marriage contract with the Dominion Association had been carried out. But first he wanted full explanations from Mr. Trowern. The 10-cent fee was only the price of a beer and he didn't care about it at all.

J. B. Curran—"You talk of divorce, Are you sure we are married yet?"

O. Gilmer—"Well, we were engaged last Winter."

Mr. Gordon withdrew his original motion and substituted one advising the Western Board that the hardwaremen were in favor of withdrawal from all affiliation with the Dominion Association. This was lost on division, the general feeling being that it would not be well to take any hasty action. A motion by Mr. Gilmer instructing the secretary to hold the fees until the next meeting was carried unanimously. It was felt that it was only fair to give Mr. Trowern a chance to present his side of the case, and offer to co-operate with the western associations on certain matters.

Criminal Code Resolution.

Moved by Wm. Gordon, Winnipeg, and J. B. Curran, Brandon: That in the opinion of the retail hardware trade of the Canadian West much good could be accomplished by the co-operation of the three interests — manufacturing, wholesale and retail; that we believe the present Criminal Code to be unfair inasmuch as it prohibits the three classes from entering into any fair agreement, while allowing laboring classes and employers to enter into agreements; and that we pledge ourselves to do all in our power to assist all kindred associations in having the present Criminal Code amended, and that the resolution be referred to the Western Board for action.

Mr. Gordon spoke strongly in favor of an endeavor being made to secure an amendment to the Criminal Code, his remarks being endorsed by Secretary Coulson, who said that the word "unlawfully" should be inserted in clause 520 in the Criminal Code, and some action should be taken to express the views of the association on this matter before the Dominion Government.

O. Gilmer, Winnipeg, spoke of the unjust laws which allowed the labor classes to do what merchants could not do.

The resolution was adopted.

Dominion Organization.

In order that a definite plan of Dominion organization be worked out, a committee composed of J. E. McRobie, J. A. Lindsay, A. J. Falconer, A. P. McDonald and O. Gilmer, were appointed to talk the matter over and prepare a suggested plan of organization to be presented to the Ontario Association by Mr. Wrigley.

Ascsociation Work at Calgary.

J. Drewe, Calgary, reported that in that city and district the trade worked together to the entire satisfaction of all. All dealers within a radius of about 130 miles of Calgary have uniform prices, the Calgary dealers refusing to cut prices and allow consumers near outside towns to send to Calgary for supplies which can be procured in their own locality. Unfair competition had been eliminated and through the existence of the association a splendid spirit of fraternity had been developed amongst the trade.

Trade Press Honored.

On the request of the president, Messrs. F. R. Munro, W. representative of Hardware and Metal, and R. W. Morrison, of the Commercial, spoke briefly, both offering their congratulations on the continued success of the association. Reference was made to Mr. Trowern's attack on trade newspapers at the recent convention of the Retail Merchants' Association at Ottawa, and his statement that it was "impossible to place your hand on a trade journal which had helped to organize a trade association." The delegates present did not agree with Mr. Trowern, and the president pointed out that resolutions had been passed at previous conventions expressing the appreciation of the association for the co-operation of the trade p rs.

On motion of G. K. Smith, Moose Jaw, and J. A. Lindsay, Winnipeg, it was resolved that the thanks of the convention be extended to the trade papers, Hardware and Metal and the Commercial, for their valuable assistance in the work of organizing this association.

Greetings to Ontario Association.

The president requested ex-President J. A. Lindsay and Ald. Gilmer to express the thanks of the association to the Ontario Retail Hardware Association for sending up a delegate in the person of Mr. Wrigley, and both speakers waxed eloquent in their description of the wonderful resources of the Golden West and regarding the enterprise shown by the hardware trade in old Ontario in organizing an association. They expressed the hope that close relations would always exist between the two organizations, and that at the annual conventions next Winter a plan of national organization would be carried into effect.

The motion of thanks to the Ontario Association and Mr. Wrigley was carried unanimously, and after Mr. Wrigley had replied briefly the convention adjourned.

O. GILMER, Winnipeg.
Member of Executive Committee.

WM. HUTTON & SONS' REPRESENTATIVE.

W. J. Grant, who visited Canada last February and March in the interests of William Hutton & Sons, will leave London about the end of August to establish a permanent agency for his firm in Montreal. It will be remembered that William Hutton & Sons were formerly represented in that city by James Hutton & Co., but the agency lapsed some years ago upon the death of James Hutton. The "Hutton" name stands for good quality in cutlery, spoons, forks and plate, and Mr. Grant will no doubt make good on his part as soon as he has established himself in suitable showrooms.

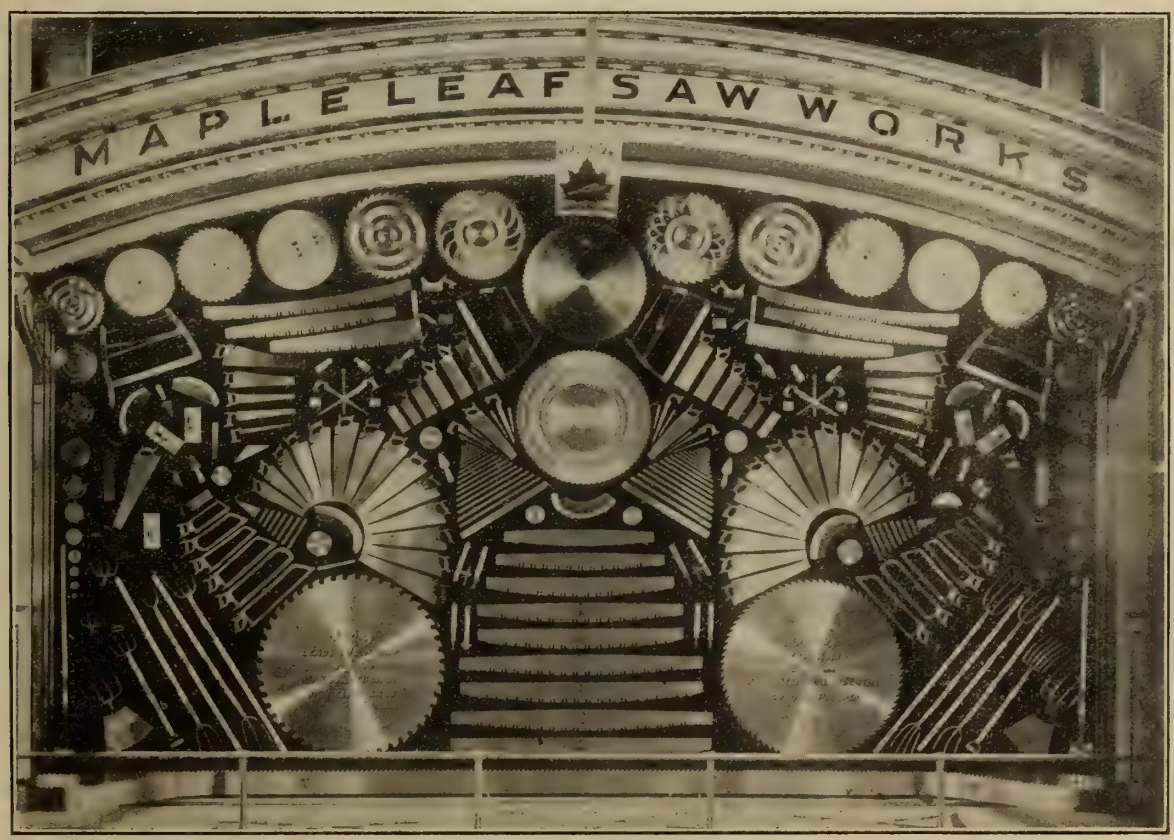
WINNIPEG INDUSTRIAL EXHIBITION

Winnipeg Manufacturers Not Well Represented—Not Held at Best Time—Many Interesting Exhibits and Large Attendance—What was Shown in Stoves and Hardware.

Compared with the exhibitions of former years, the Winnipeg Industrial Exhibition held last week made a very favorable showing and its friends are encouraged to hope that, under the new management, there are much better things to come. Favorable comments were heard on all sides and there were many who were prepared to make comparisons by no means unfavorable with the Dominion Exhibition. Certain it is, that, while the exhibition was not so large in extent as when it was held under Dominion auspices, the preparations were more nearly complete when opening day arrived and the machinery worked more smoothly. Comparing conditions with those of a year ago, it is not too much to say that the vast majority of the exhibits were in better shape this year on the evening of the first day than they were last year when the exhibition was half over. In a word, something like system has been evolved from the chaos of former years and those who are qualified to judge unite in ascribing the better order of things to the efforts of Dr. Bell.

Must be Before Harvest.

It is unfortunate that it is necessary to hold the fair at a time of the year when it is impossible to secure exhibits that are really representative of the varied resources of the Canadian west. Were it not for the endless line of threshing machinery exhibits the visitor would scarcely realize that the exhibition is held in a rich agricultural country. The crop is yet to be harvested, and for that reason and others the exhibition does not represent the agricultural resources of the country it serves. Were it possible to hold it a few weeks later in the year there could easily be secured exhibits which would open the eyes of the visitor to the real resources of the newer Canada. Unfortunately this is not possible, as in a few days' time the harvest will commence and the entire west will be busy with it until the first snow flies. The only possible date for the exhibition is the week chosen in July before the harvest commences.



Manufacturers Should be in.

But if it is impossible to have an exhibition in Winnipeg in July which is really representative of the varied agricultural resources of an agricultural country, there should be nothing to hinder an exhibition truly representative of the manufacturing, industrial and commercial interests of Winnipeg and the west. It is true that the manufactures of Winnipeg are not so many as might be wished, and not so many as there will be in a few months' time, but they are larger and of much more importance than most people imagine and their products should be on exhibition. It is partly because their products are seldom or never properly exhibited that the great majority of people imagine that they are of much less importance than they really are.

Maple Leaf Saws and Tools.

Few users of saws in Canada are not familiar with the good qualities of "Maple Leaf" saws, the product of the factory of Messrs. Shurly & Dietrich, Galt, Ontario. The company's claim that they are the best in the world has been endorsed on many sides and it is, therefore, a source of pride to Canadians that in saw-making, as well as in athletics and other spheres, the "Maple Leaf" is in the van.

At the lower end of Manufacturers' Building No. 2, the marvelous display of band, circular, hand and other saws was the admiration of all. With a wide alleyway through the centre of the building, the display stood out like a lighthouse in a fog and was one of the centres of attraction. In the exhibit were band saws in sizes from 1 inch to

Winnipeg Industrial Exhibition.—Exhibit of Shurley & Dietrich, Galt.

90 inches in diameter. Messrs. T. F. Shurly and O. H. Voht, traveling representatives of the company, were in charge of the display, explaining to the few who were not familiar with "Maple Leaf" goods their exceptional qualities of merit, chief amongst which is the secret tempering process which greatly lengthens the life of the keen-cutting edge, a worldwide demand having been created for the saws on account of the tempering process. Wherever "Maple Leaf" goods are shown they carry off the highest honors.

A line of "Maple Leaf" harvest tools was also displayed, and for quality and finish they were unexcelled. The tines of the forks are specially ground and polished with a bronze finish, being made of the best crucible fork steel of uniform temper. The forks are carefully hung to the handles, which are of selected second-growth white ask, highly waxed and polished. The hoes are nicely concaved, well tempered and whole gave an effect which excited attention, and were a credit to the manufacturers. The Canada National range, made in three sizes, is their large seller in Manitoba, Saskatchewan and Alberta. This is a handsome range in appearance and is put up in a manner which is durable, strong and everlasting. The oven door is supported by a new style of rectangular hinges, which have double the purchase power of the ordinary hinge and will hold a weight of 300 lbs. It can be taken off in two seconds, being controlled by a patent coil spring easily adjusted and removed. These ranges are tinned throughout with heavy millboard asbestos, which is held in place by cast iron gratings, this absolutely preventing the absorption of damp or sweat, as happens in ranges where the asbestos is tightly enclosed between two sheets of steel. The fire pot for coal

Canada National ranges can also be had with a special grate for burning wood 28 inches long. A sliding grate regulates the air and lets the ashes drop into the big ash pan, which will hold enough ashes for three or four days. They recommend the reservoir on the left end of these ranges as the most satisfactory way of heating water. The way of attaching the tank does not effect the oven, and also utilizes the large amount of surplus heat thrown off the left side of fire box. The planished copper tank holds nine imperial gallons of water and can be detached when the customer wishes a square range. The copper tank does not run into the fire box as in some ranges. Therefore there is no noise made, but the water is kept at boiling point always. The body of this range is made of heavy planished steel and altogether it is one of the most

Winnipeg Industrial Exhibition.—Exhibit of Moffat Stove Company, Weston, Winnipeg and Calgary.

tapered round. A feature of this display was the new patent bow-braced rake made of one piece steel without a weld.

National Stoves.

National stoves and ranges, manufactured by the Moffat Stove Co., of Weston, Ont., constituted a most creditable and conspicuous exhibit in the centre of the Stove Building. This firm, who are the largest exclusive makers of stoves and ranges in Canada, have branches in Winnipeg and Calgary, where they carry a full stock and are able to supply their customers on the shortest notice. The order of the display was especially attractive, a row of steel and cast ranges occupying an elevated position in the background, in the front being a line of heaters, and in the intervening space an assortment of the different styles of heating stoves, base burners and also samples of their new cheap "Nelson" range. All were well polished and nickelled, and the is straight and clean. No clinkers can rest in the corners as the duplex grates cut this completely out.

There is nothing so sweet and digestible as a piece of broiled meat. The old way of broiling on top of the range by taking off the cover is all right if you can stand the smoke and smell. The "Canada" range is fitted with the front key-plate hinged; this can be adjusted as required, and allows you to use the full length of the fire box. It can be lifted with the poker or lifter, and by putting the poker in the reverse side of handle will readily drop to its place again. There is no range on earth which has so many labor-saving and practical improvements as the "Canada."

All National ranges are supplied with cast iron flue backs, guaranteed for 20 years. Steel or sheet iron flue backs rust out in a few years on account of the creosote, and condensation of smoke from the stovepipe and chimney.

satisfactory working ranges on the market to-day.

This firm also manufactures a complete line of heaters, including the "King" base burner, "Royal Opal" base burner and the "National Oak" heater, which burns any kind of fuel. It can also be supplied with self-feeding attachments and has duplex grates and shaking ring.

The "Fairy Oak" is a cheaper class made in five sizes. This heater has had some new improvements over last year's pattern, which include larger feed door and higher body.

In looking over this exhibit the "Alberta National" hot blast should not be lost sight of. This heater has straight fire pot and nothing whatever to hold up ashes or clinkers. It is also supplied with duplex grates and shaking ring, which can be taken out in pieces without removing the fire pot. No smoke goes through the house when putting

the coal in the new feed door. There is also a very large air space between the fire pot and body of stove which makes the fire pot indestructable. Attention must also be drawn to Moffat's new cheap steel range called the "Nelson," which is all made of heavy stamped steel with the exception of the top plates and grates. This is a new departure in the steel range line and will be hailed with satisfaction by the hardware trade generally.

C. L. Moffat, who was in charge of this exhibit, states that their trade in Western Canada increased 100 per cent. last year.

Dealers wishing the exclusive territory should write to their branches at Winnipeg or Calgary, or head office, which is at Weston, Ont.

McClary Mfg. Co's Exhibit.

The McClary Mfg. Co. for the past few years have found it more advantageous to their customers and the trade generally to exhibit their wares on their own premises, and having a very large sample room specially fitted up for this purpose in their fine six-storey warehouse, 183-185-187 Bannatyne avenue, they made a special showing of a large variety of their goods.

Their line of steel ranges suitable for the smallest cottage to the largest hotel was most complete, while their Sunshine and Magnet furnaces for coal or wood, which are so extensively used in the west, have been in such demand that the sales have been more than doubled already this season. A large line of new heating stoves specially adapted for the west were also shown.

Their lines of enamelware are very extensive, embracing their new London and Canada wares which are acknowledged by the trade generally to be equal to the best imported goods. The display of tinware was also very extensive, in fact there was scarcely an article required in this line but what was shown in every variety. The products of this firm are sold from the Atlantic to the Pacific Ocean, Winnipeg branch being their distributing house for the Provinces of Manitoba, Saskatchewan, Alberta and Northwestern Ontario. The company are the largest importers of metal goods such as galvanized iron, tin plates, Canada plates, etc., in Canada, and heavy stocks of these goods are carried at the Winnipeg warehouse for jobbing to the trade in Western Canada.

A specialty is also made of the manufacture of creamery supplies, the demand for tinware of this type being steadily on the increase in the west. In keeping with this line the company's display of churns and refrigerators is probably the largest to be found west of the Great Lakes.

The foundries and workshops of the company are located at London, Ont., where 1,200 men are employed to meet the demands of the public. Quite recently the growing trade forced the company to increase correspondingly the working apparatus and it was found necessary to build additions covering 12 acres of ground to their already large plant. These buildings are equipped with the most up-to-date apparatus in America, and 500 men are employed in the manufacture of the Sunshine furnaces and famous stoves alone. In addition to the regular lines of stoves and ranges the gas ranges demand a great deal of attention, as may be seen from the fact that no less than 150 of these are turned out daily in the finished state, the whole top floor of the largest building being given to their manufacture.

The enamelling shops are the most complete on the continent, and the lines turned out by the McClary Co. are the most perfect that can be made. The branch houses are situated in all parts of the Dominion from the Atlantic to the Pacific Ocean. Large shipments are regularly made to Winnipeg, Toronto, Hamilton, Montreal, St. Johns, N.B., and Vancouver, B.C.

The Winnipeg branch, under the able management of J. W. Driscoll, who has been associated with the company for the last twenty-five years, is one of the most progressive of its kind in the west, and the immense and beautiful stock carried here shows only too well the fact that Canadian people appreciate and demand a superior Canadian manufactured article.

Winnipeg Paint and Glass.

An attractive exhibit in the north Manufacturers' Building was that of the Winnipeg Paint & Glass Company. Their display was a representative one and showed as well as could be done in a limited space the various lines handled by this well known firm. A feature of the exhibit was a miniature house with malthoid roofing, showing how the material is laid and exhibiting its wearing qualities.

Winnipeg Industrial Exhibition.—Exhibit of Winnipeg Paint & Glass Company, Winnipeg.

At the back of the exhibit was a castle of paint cans artistically and originally arranged. The paint used in this castle was of the brand known as 100 per cent. pure, manufactured by the Martin Senour Company, of Montreal. The Martin Senour Company are a comparatively new firm in Canada but have been in the paint business in the United States for many years, and the quality of their paint has made an enviable name for itself.

At the left of the exhibit was a pyramid of varnish cans, representing some of the leading varieties handled by the firm, including Berry Bros., Pratt & Lambert and Murphy's. The exhibit was set off and brightened by large plain and bevelled mirrors which hung on the walls. They were set in oak frames.

The attractiveness of the display was

enhanced by a large art glass dome which had been placed in the booth. This dome was a work of art and the effect produced by the light shining on it was very beautiful. The object of this dome being placed in the booth was to show the effect it has on a rotunda or dark room. The dome was of their own manufacture and gives some idea of the work turned out by this firm.

All the lines shown in fancy and plain glass are manufactured by the firm in Winnipeg, it being, therefore, a purely western product. This department is the largest and most up-to-date in the Dominion, all the workmen being experts.

All the lines shown in fancy and plain the second being all the fixtures for the Northern Bank in St. Boniface, which are to be installed at the close of the exhibition. The display showed the superior workmanship of the products of the company, and also gave an idea of how they appear in use. The fittings, tables, counters, etc., were all installed just as they will appear in Winnipeg's flourishing suburb's new bank. The furniture is all of solid oak and was all manufactured in the company's Fort Rouge factory, where about 250 are employed. All the bevelled and chipped glass is manufactured here, and sample showcases with shelves were shown in the exhibit. No more practical display of the company's work could have been made than that of the St. Boniface bank fixtures.

The two displays were most creditable and ones that both Winnipeg and the firm should well be proud of.

Keep the dust off the stoves you display—it means labor, but it pays.

Hardware Specialties.

An exhibit in the Manufacturers' Building which was always a centre of attraction for visitors from the farming districts was that of the Louden Machinery Co., Guelph, Ont., in charge of their Winnipeg representative, D. T. Baltzer. The most interesting part of the display to hardware merchants was, probably, a number of small doors hung with Louden's steel king barn door hangers, which are fitted with track cleaners which throw all obstructions off the track instead of letting them wedge under the wheel, a common evil with other hangers. Louden's standard-jointed, double-strap and double-tread barn door hangers were also exhibited with Louden's barn door and standard track.

Other interesting features of the exhibit were the samples in operation of Louden's feed and litter carriers, cable rickers and hay carriers. The first mentioned was fitted on the double-beaded steel track, which the company claim is the only track suitable for curves and switches. The cable carrier can be used with a fork or sling from a wagon or rake and can construct a rick from 40 to 60 feet long at one setting. The junior sling and junior hay carriers are both models of simplicity combined with durability. Altogether the company makes fifteen different styles of hay carriers, ten styles of barn door hangers, as well as barn door latches, cow stanchions, hay rick clamps, etc. Another specialty which should sell readily through the hardware trade is their stock marker and cattle dehorner, a simple little instrument which has been thoroughly tested and sells on its merits everywhere.

"Empire" Stoves and "Dillon" Hinge-Stay Fencing.

The Christie Bros. Co., 238 King street, Winnipeg, western agents for the Canadian Heating & Ventilating Co., Owen Sound, and the Owen Sound Wire Fence Co., had a combined exhibit of the products of both companies in Manufacturers' Building No. 1, it being a centre of interest for both dealers and farmers on account of the well-known good qualities of both the "Empire" line of heating and cooking goods and the "Dillon" hinge-stay fence. Joseph Christie, the enterprising Winnipeg representative, and James D. Brownlee, western traveler for both lines, covering Manitoba, Saskatchewan and Alberta, were in charge of the exhibit.

Amongst the "Empire" line on display were the "Empire Queen" range, the "Empire King" furnaces, the "Empire" steel range, the "Empire Ideal" baseburner, and the "Empire Oak." All of these lines are winning great favor, and contain many features which the dealers find to be strong talking points to customers in both town and country. The "Empire Ideal" baseburner is one of their most popular lines, and is handsome, modern, perfectly fitted with first-class stove flue construction.

Farmers who have tried or examined the hinge-stay principle of the "Dillon" fence give it their hearty endorsation. In the construction of the fence high carbon hard steel wire is used in all the strands while No. 9 medium tempered wire is used for stays. The manufac-

Winnipeg Industrial Exhibition.—Exhibit of Winnipeg Paint & Glass Company, Winnipeg.

turers guarantee this wire to stand a pressure of 2,300 pounds and over, this being more than sufficient for any use which fencing may be put to on the farm. People climbing over the fence do not bend it out of shape, the wire

durability and safety, being designed to replace barb wire at small cost. The company makes a specialty of pushing business through hardware merchants and offer to supply printed matter to any dealer on request.

the exhibit, several steel ranges in the rear row, and a full line of cast ranges, oaks, hot blasts, in addition to the "Tortoise" stove which has sold so well in the west during the past year. The company manufacture everything

Winnipeg Industrial Exhibition.—Exhibit of Christie Bros. Company, Winnipeg.

used in the strands being coiled spring. This keeps the fence tight at all times and a weight on the fence merely causes it to lay to one side on its hinges, springing back into shape as soon as the weight is removed. The same features render the fence impervious to extreme heat or cold, this overcoming the objection to wire fencing owing to the action of frost upon it.

The "Dillon" hinge-stay fence is not a cheap article. The aim has been to

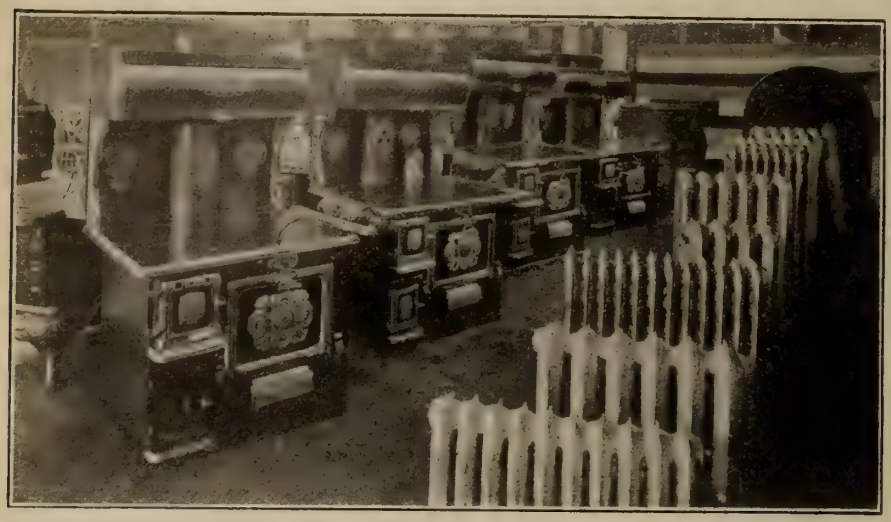
"Good Cheer" Exhibit.

One of the best located and neatly arranged exhibits in the Manufacturers' Building was that of the James Stewart Mfg. Co., Woodstock, Ont., and Winnipeg, Man., it being in charge of F. G. Brenton, manager of the Winnipeg branch, and E. McDougall, traveling representative in Manitoba and Saskatchewan. Backed up with a catchy and artistic display of bunting

in heating stoves, and samples of every line, taken from the stock carried at Winnipeg, were included in the display.

The special octagon-shaped grate section of the "Good Cheer" furnace was shown on the floor for examination by the public. The radiator of the "Good Cheer" furnace differs materially from that of the ordinary furnace, and is its strong point. This is where the effectiveness of a furnace tells. This radiator is built on the principle of a tubular

Winnipeg Industrial Exhibition.—Exhibit of James Stewart Manufacturing Company, Woodstock and Winnipeg.



make it perfect in every detail, its quality making it cheaper than inferior fences in the long run. Various styles are manufactured, one being made particularly for the prairie land of the west. While lower in price it combines

and flags, the "Good Cheer" line of heating and cooking goods was easily one of the most closely examined exhibits in the building.

The "Good Cheer" exhibit included a number of furnaces shown at one end of

boiler, having large tubes that are exposed to a greater heat than the outside shell of the drum, and making just that much more heating surface for the air to come in contact with; being perpendicular, it forms natural flues, draws

the air through them rapidly (as air always rises in straight lines), gives more than double the heating surface, thus enabling it to heat large volumes of air to a Summer heat, instead of small quantities of over-heated air with all the moisture and oxygen burned out. Thus the "Good Cheer" furnace will, in a given time, heat a greater quantity of fresh air to a higher temperature, and with less fuel, than can possibly be done by any other furnace depending only upon exterior radiating surface. As a tubular boiler is a greater generator of steam than the old flue boiler, so the tubular radiator is a greater producer of heat than any exterior radiating surface.

Winnipeg Industrial Exhibition.—Exhibit of Gurney Foundry Company, Toronto and Winnipeg.

Another feature of the exhibit was one of the Dunn improved hollow cement block machines, which have met with such a great success during the past year. Many hardware dealers have bought one or more of the machines and by renting it out to farmers and others have increased their building trade and paid for the machine several times over. The construction of machine is simplicity itself. There are no cogs, springs or gears to get out of order or to require adjustment. To change from one pattern of block to another requires but the removal of four loose pins, and the substitution of the required plates. A screw driver is all that is necessary in placing the cores in position. Any change can be made in two minutes.

Gurney's Hotel Kitchen.

Of all the stove displays in the Manufacturers' Building it is doubtful if any received more attention than the Gurney Foundry Company's exhibit. It was the largest of any, but in addition to this attraction it contained a particularly attractive display of hotel cooking apparatus, a fair reproduction of which is to be seen in one of the accompanying illustrations. In addition to the large hooded John Bull hotel range, having two fires and two ovens, a large steam carving table, a plate warmer and a portable bakers' oven were included, these, as well as the Bright Idea steam boiler, an Imperial Oxford range, an Oxford heater and several gas stoves being also shown in the engraving. A similar kitchen outfit to that shown was recently installed in the new C.P.R. Alexandra Hotel at Winnipeg, but on a much larger scale, it having a table to accommodate two fish dishes, nine meat dishes and eighteen vegetable pots, while the range had eight fires and eight ovens. The kitchen exhibit was completed by a fine display of copper and aluminum pots, pans and urns. On the whole, this model kitchen display could only have been produced by a first-class firm.

Another interesting part of the exhibit was the display of Oxford Chancellor and Imperial Oxford ranges, four sizes of the former and two of the latter being shown. In the Oxford Chancellor steel range the company claim that never before in the history of range building has the public been offered a steel range so complete in every detail and at so low a price. It is handsome in appearance, constructed of the very best materials and mounted by the most skilled mechanics. Year by year the Imperial Oxford has had such a wonderful sale that it is unnecessary to describe it in detail. It can safely stand on its record as a high-class range sold at a moderate price.

In the Oxford air-tight heater (practically a small furnace surrounded by an open casing) and the Oxford Florence hot blast air-tight stove the company has two heaters which are particularly adapted to Western Canada needs and both have merited and secured a large sale. In some sections of Canada, particularly Manitoba and the far west, there is a type of fuel which burns with a very fierce heat, but is troublesome from the fact that it produces exceedingly large and hard clinkers. Even when this fuel, which is best designated as lignite soft coal, is burned under ordinary conditions, with a large percentage of the smoke escaping unconsumed, it is highly economical as a fuel, but where the smoke is burned, as in the case of the Florence stove, a very high efficiency is attained. The fuel is ignited in the Florence stove under ordinary conditions, as in any other stove. When combustion is active, the draft is completely cut off from below the grate bars, and a damper is opened at the back of the stove which admits air to the outside of the firepot, where it is superheated. It is thence conducted into a ring which surrounds the fire and is above the surface of the fuel. The effect of shooting this superheated air into the smoke of combustion is to burn this smoke with a beautiful, clear, intense flame, and as no air is admitted below the grate, the only combustion that occurs is the burning of this gas or smoke. Having extracted all the gaseous products from the fuel, a coked mass remains which can be burned as in an ordinary stove by opening the lower damper. Having constructed the stove to

Winnipeg Industrial Exhibition.—Exhibit of Gurney Foundry Company, Toronto and Winnipeg.

burn low-grade soft coal, the construction was so arranged that the economy attained in using soft coal would also result with the hard coal, and during many series of experiments the company succeeded in making a stove that produces most perfect combustion with any fuel, from high-grade coal to the lowest grade of soft coal, slack, or even peat. Some of the advantages which this construction possesses are as follows: In the general run of so-called smoke-consuming stoves the smoke is only burned when the fire is run at full blast, and should you desire to damp the stove down, the smoke escapes unconsumed, as in an ordinary stove. It can readily be seen how, in closing the lower damper entirely in the Oxford Florence, and so cutting off the supply of air from below the grate, and then partially closing the damper which admits the air to the hot blast flue, the stove will be damped down to a fine point, and will still continue to burn its own smoke.

In addition to the lines enumerated, Oxford hot water boilers, hot air furnaces, radiators, gas ranges and Laurel heaters were also on exhibition.

Winnipeg Industrial Exhibition.—Exhibit of Malleable Steel Range Company, South Bend, Indiana.

Malleable Steel Ranges.

The Malleable Steel Range Co., South Bend, Indiana, had an attractive exhibit of the South Bend malleable range, which is particularly neat in design and finish and commends itself to those desiring great durability and large cooking capacity. The company has already worked up a large trade in Western Canada, through their representative, W. M. Fulton, whose headquarters is at Brandon, and from whom descriptive literature and agencies can be secured.

"The Malleable" was placed on the market in response to a strong demand for a range which combines, with the "sterling" malleable construction, exquisite finish, and the latest and best modern improvements. Whilst being handsomely nickeled, easy to clean, it is in fact the essence of simplicity and splendid taste. Only very heavy steel plates are used in manufacture, and smooth, thoroughly annealed malleable iron, literally welded into an air-tight form. It is as necessary for perfect operation that a range be air-tight as a boiler water-tight. This construction can be accomplished only by riveting throughout. Malleable iron possesses such strength and tenacity as to allow range-makers driving every joint to the point of air-tightness, with the aid of Norway rivets. "The Malleable" does not pretend to be a cheap range. No range can have its construction and finish and be cheap.

Joy Malleable Ranges.

A small but interesting exhibit in the Manufacturers' Building was that of the Joy malleable ranges, manufactured in Toronto by the Joy Mfg. Co., the exhibit being in charge of H. M. Joy, the head of the company, and formerly a retailer in Ontario and in North Dakota, having in the latter state been president of the Retail Hardware and Stove Dealers' Association. The exhibit comprised only three ranges, owing to a delay in railway transportation, but it is safe to say that few larger exhibits attracted the attention of stove dealers and housewives so much as did the "Joy" display.

The "Joy" is the only malleable range made in Canada and sold through recognized trade channels, and the remarkable popularity it has won in Ontario and Western Canada in the first year of its manufacture is proof positive that it is a range of merit. This opinion was more than verified by comparing it with its American competitors on exhibition in the Stove Building. "We've got them all beat on the grate and fire box," said Mr. Joy, "and we claim that on account of the special construction of these parts of our range that the oven will bake and one can cook in far shorter time with a smaller expenditure of fuel than on any other range on the market."

The Joy Company ships in carload lots to Winnipeg and distributes from the metropolis of the prairies. The west is in this way well looked after. Exclusive agencies are granted to any dealer in a town not already supplied by "Joy's," and as it is the only malleable range dealers can sell with the "Made in Canada" slogan it is an opportunity many are certain to avail themselves of promptly.

Winnipeg Industrial Exhibition. Exhibit of Joy Manufacturing Company, Toronto.

Winnipeg Ceiling & Roofing Co.

Among the larger exhibits at the exhibition was that of the Winnipeg Ceiling & Roofing Company, Congdon avenue, Winnipeg, their display in Manufacturers' Building No. 2, as shown in the accompanying illustration, including excellent samples of the products of the company's factory.

This firm commenced manufacturing in September, 1904, manufacturing metal ceiling goods of many patterns, cor-

nices, fire-proof windows, skylights, corrugated iron, all kinds of metal sidings and shingles, eave trough, conductor pipe from 2 inches to 6 inches in diameter, plain and corrugated, elbows and all other metal trimmings. Among the many styles of goods manufactured the Cross corrugated iron for elevator use is a very great feature.

The plant is 50x300 feet and two storeys high. In passing through the plant an idea of the immense business that is carried on by this firm can be seen by noticing the powerful machines which are in use, weighing all the way from 5,000 to 30,000 lbs., and handled by the most expert mechanics. The ones most noticeable are the eave trough, window and conductor pipe machines. The plant is open to visitors at all times.

W. J. McMartin, president and manager, has put forth every effort to have all lines the most up-to-date on the market, and having a very wide experience in the manufacturing of these lines the firm is in a position to give customers the best satisfaction. The sales department is looked after by W. A. McKim, another most obliging official.

Besides its manufacturing business the company carries one of the largest stocks of galvanized and black sheets, tin, Canada plates, etc., of any firm in the west, and has worked up a large metal jobbing trade. They are now planning to erect a large warehouse to take care of the growing trade in a satisfactory manner.

McCLARY'S PICNIC.

The McClary Mfg. Co's employes, of London, went to Sarnia, where they embarked on the steamer Conger for Stag Island. The 7th Regiment Band accompanied them.

TRIBUTE TO THE SALESMAN.

E. C. Simmons, president of the Simmons Hardware Company, St. Louis, is thus quoted in Salesmanship :

I wish to pay a merited tribute to a class of men for whom I entertain the most profound respect ; in fact, speaking of them as a whole or a class, I may fairly say I love them—I mean the salesmen. It is a generally conceded fact that I have employed more first-class salesmen than any other man that ever lived. I mean intelligent, up-to-date, first-class salesmen, and to them my heart goes out in appreciation and gratitude for their efforts and faithful service.

Fifty years ago there were no traveling salesmen ; to-day there are hundreds of thousands of them, constantly on the wing creating business. When they began about forty years ago they were a class of free and easy, jolly, drinking and smoking set of "good fellows," as the term goes, not overly punctilious about morals or the finer points of human life. To-day they are sober, earnest, educated, intelligent, faithful and loyal, necessities to every successful business, with one or two exceptions. The name of their friends is legion.

Among my warmest and most valued personal friends is a man who has traveled for us for many years, during which time his personal sales have reached the enormous proportions of over $2,000,000 —who has always been loyal, faithful and true to the house and myself, and in all that time has never faltered in his work nor flagged in his efforts, and now he has his son with him, teaching him his way and teaching him to serve my sons as he has served me. Is it any wonder that I love him and would divide my last dollar with him, and that I love his class also ?

Nothing gives me so much pleasure as to take hold of some young man who has not yet learned how to sell goods, but who is a good bit of material, who is honest with himself, and with the house, and really wants to succeed and is willing to work. How I do like to help him ! To put forth my hand and have him rest on it, and steady himself and regain the confidence in himself that perhaps he has lost ; to give him the glad hand of a cordial welcome when he comes in, and to thank him for his hard and successful work, if the facts permit me ; to teach him that the way to success is as plain as the way to market, viz., that uprightness, truth, fair dealing, hard work, and a knowledge of the business is all the "tools" he needs to work with. In brief, to take hold of a poor salesman or a mediocre one and make of him a good one—a crackerjack, a star. I say I love that work—it is my favorite pastime and pleasure. But if he is not a worker I have no use for him, because I literally despise a lazy man, or a salesman who will take the late train instead of the early one.

Selling goods is the big end of the hardware business—that's why I attach so much importance to it. Selling creates business—if you don't create you have no business to care for. Many young salesmen start out with the idea that they must be "smart" and are always trying to fool somebody. That's a big mistake—a salesman should never fool anybody, never try to, never take a short cut on a customer, never overcharge him or mislead him, but always try to help him to prosper.

Winnipeg Industrial Exhibition.—Exhibit of Winnipeg Ceiling and Roofing Company, Winnipeg.

About nine-tenths of the value of a demonstration depends on the amount of preliminary advertising that has been done. It should be begun six weeks before the demonstrator is on the ground and continued right up to the time the curtain rises.

HARDWARE TRADE GOSSIP

Quebec.

Horace Talbot, tinsmith, of St. Joseph, has assigned.

Lesperance & Rouillier, plumbers, Montreal, have dissolved.

Tremblay & Perras, stove manufacturers, Montreal, have dissolved partnership.

Collyer & Brock, electricians, Montreal, have been succeeded by Guy N. Brock.

W. S. Leslie, of A. C. Leslie & Co., is at present on a trip through British Columbia and the west.

C. F. Smallpiece, a director of Lewis Bros., has returned from an enjoyable fishing trip up in Northern Ontario.

George Ramsden, one of the western representatives of Caverhill, Learmont & Co. is in the store in Montreal this week.

At 40 Crescent street, Montreal, on 2nd inst., aged 32 years, Robert Duncan Munro, late of Victoria, B.C., elder son of Mr. Robert Munro. Funeral private.

Mr. Henthorn, of Marsh & Henthorn, manufacturers of hoisting engines, boilers and machinery, Belleville, was in Montreal during the week.

C. M. Strange, of Lewis Bros., is off on a holiday among the Thousand Islands. He will also visit Toronto, Kingston and other western points.

Ontario.

W. Clark, plumber, Hamilton, was in Toronto during the week.

J. B. Reade, of H. S. Howland, Sons & Co., Toronto, is back from his vacation.

W. Kirkland, of the Kennedy Hardware Co., has gone for a short trip to New York.

C. H. Rivercomb, plumber, of Winnipeg, spent a few days last week and this week in Toronto.

F. A. Campbell, hardware dealer, Mitchell, Ont., has put new plate glass fronts in his store.

Chesney & Smiley, of Seaforth, have purchased E. A. Latimer's stock of stoves and tinware.

W. Peter, of Peter & Sylvester, hardware and plumbing, Stratford, was in Toronto on Wednesday.

W. J. Hamilton, of Drummond, McCall & Co., Toronto, was in Brantford, Wednesday of this week.

Messrs. John A. Sanderson and John Harold, of the Sampson Harold Company, Paris, returned on Thursday from a two weeks trip to Winnipeg and the west.

The employes of the Ontario Lantern & Lamp Co., Hamilton, held their annual picnic at Niagara Falls, Saturday last.

W. Vallance, of the Wood-Vallance Hardware Co., Hamilton, accompanied by Mrs. Vallance and daughter, is in the west.

J. M. H. Robertson, president and general manager of the James Robertson Co., of Montreal, was in Toronto on Tuesday last.

Harry Pringle, city traveler for G. F. Stephens & Company, Winnipeg, is visiting his old home at Cobourg, where Mr. Pringle served his apprenticeship as a hardware clerk.

Harold (Hans) Anderson, of Merrick, Anderson & Company, Winnipeg, is one of the four-oared crew representing the Winnipeg Rowing Club at the Henley regatta at St. Catharines this week.

The Hobbs Manufacturing Company, London, have established a branch of their business in the Tees & Persse building, Winnipeg, where they are now doing all classes of leaded glass work.

Norman Pethick, 254 George street, Toronto, who has been with James Paton, paint and oil dealer, Toronto, died on Aug. 1, after three or four day's illness. He was well known in the paint trade.

George B. Morris, of Guelph, who recently sold out his hardware business to McMillan Bros., has been appointed local manager of the Guelph branch of the Royal Bank. This speaks well for the esteem in which Mr. Morris is held in business circles in his city.

J. Frank Kitchen, of the Brantford Roofing Company, returned from a business trip to Winnipeg on Thursday. Mr. Kitchen and his father have recently established themselves in business as manufacturers' agents at Brantford. They are also connected with the Brantford Cartage Company and the Brantford Felt & Rubber Company.

Western Canada.

Doctor Bros., Moose Jaw, have added hardware to their stock.

R. M. Read, McGregor, has sold his hardware store to T. B. Barry.

E. Johnson, of Johnson & Co., Brandon, is enjoying a holiday at the Pacific Coast.

W. J. McKay, Midale, Sask., hardware dealer, will move into his new store about October 1.

J. D. McLeod, machinist, and E. Stovin, blacksmith, both in Deloraine, have merged their business interests under the firm name of McLeod & Stovin.

Hodgson & Stearman, of Vancouver, B.C., have been appointed agents for Pease Economy furnaces.

W. G. Jones, of the Pease Foundry Co., Toronto, started on the return trip east on Saturday of last week.

W. J. Doig, M.P.P., a prosperous hardware dealer from Russell, Man., was seen by Hardware and Metal in one of the Winnipeg warehouses last week.

G. O. Edwards, hardware dealer, of Sedley, Sask., was in Winnipeg last week and called at the Hardware and Metal office. Mr. Edwards reports business as being very brisk in his town.

A large number of hardwaremen were in Winnipeg last week during the Exhibition. Among those reported at various wholesale houses were Geo. Wallace, Wetaskiwin; R. J. Neithercut, Wawanesa; J. A. Gilhuly, Arden; Wm. Hawk, of the Moose Jaw Hardware & Lumber Co., Moose Jaw; J. Thompson, of Thompson & Asworthy, Weyburn; S. Schwanz, Rocanville, and Mr. McRory, of Souris.

PRESENTATION TO T. L. WALDON.

T. L. Waldon, who for several years has been western manager for Caverhill, Learmont & Co., has resigned his position with that firm to become assistant manager of the Marshall-Wells Co. in Winnipeg. Mr. Waldon has always been deservedly popular with his staff and on Saturday evening of last week he was tendered a dinner by the western travelers of the firm and presented with a gold headed cane suitably engraved, and an address which was read by W. H. Warmington, as the senior member of the traveling staff. The address was as follows:

Winnipeg, July 28, 1906.

Thos. L. Waldon, Esq.:

We, the undersigned western travelers of Caverhill, Learmont & Co., have taken the liberty of asking you to join us at this dinner with two objects in view.

We regret exceedingly to know that you have decided to sever your connection with the firm with which we have all been associated for a number of years, as our relationship has been an extremely happy one. We also appreciate your efforts and advice, which have always been extended to us with reference to our respective customers. We have always felt that we could approach you on any subject whatever, not as a manager, but as a friend, and we hope, though severed in our business relationships, we shall not lose your friendship.

In a word, we have known you to be a just, kind and sympathetic manager and as you are leaving us we would ask you to accept this small token of our esteem and appreciation. You may be assured that you carry with ou our best wishes for a successful and prosperous future.

Signed, W. A. CAMERON,
LIONEL HANEY,
J. L. JOHNSTON,
W. H. WARMINTON.

Mr. Waldon replied in suitable terms attributing his success to the co-operation of the staff and particularly to the boys on the road. He assured them that he would always cherish the kindliest recollections of the years spent with the Caverhill, Learmont Co. boys in the west.

Mr. Waldon assumed his new duties as salesmanager of the Marshall-Wells Co. on Wednesday, August 1.

WESTERN HARDWARE CONVENTION.

In every respect the convention of the western hardwaremen held in Winnipeg last week was a striking success. For a midsummer gathering the attendance was large and the executive were well pleased to meet so many dealers. One hardwareman came from Calgary and another from Innisfail, and men do not travel almost 1,000 miles for no purpose. The attendance proved the strong hold of the association upon the western trade and demonstrated that the retail hardwaremen of the west are in earnest in their support of the association.

As usual, the western hardwaremen brought to the discussion of the various resolutions trained business intellects, and little time was lost in getting down to business. A number of important resolutions were passed for which our readers are referred to the full report in another part of this paper.

A decided step in advance was the decision to open negotiations with the newly organized Retail Hardware and Stove Dealers' Association of Ontario with a view to the formation of a Dominion Retail Hardware Association that will be truly national in its scope and influence.

The relations of the Western Hardware Association with the Retail Merchants' Association of Canada were fully discussed, but final decision was deferred until the February meeting. At one stage of the proceedings it seemed probable that the western hardwaremen would advise the Western Board that it was their desire to sever all connection with the association of which Mr. Trowern is secretary, but we think they were wise in deferring their final decision until next meeting. It is true that absolutely nothing has yet resulted from the arrangements made last February and that there seems little reason to expect the co-operation of the Dominion Association secretary. But it is only fair that Mr. Trowern should be given every opportunity to present his side of the case and to show that he is prepared to work with the western associations. The western hardwaremen desire harmony and are anxious to co-operate with all retail associations in every part of Canada to promote the common interests. In that desire they are right, and they have the hearty support of Hardware and Metal. For that reason it is well that final consideration of this important matter has been deferred until next meeting.

MR. TROWERN AND THE MACLEAN TRADE PAPERS.

At the meeting of the Retail Merchants' Association of Western Canada held in Winnipeg last week, President Hunter, in the absence at a committee meeting of Secretary Coulson, read a long letter to Mr. Coulson from E. M. Trowern, the secretary of the Dominion Retail Merchants' Association. That letter contained a bitter attack upon two of the MacLean trade papers, Hardware and Metal and The Canadian Grocer, and it is certainly the right and privilege of this paper to reply to it. In justice to Mr. Trowern, we should like to reproduce the letter in full, but Secretary Coulson takes the ground that it was a personal letter, and that it was through a misunderstanding on the part of President Hunter that it was read in the open session of the convention. We respect Mr. Coulson for his honorable scruples in this matter, but take the ground that, the letter having been read in open meeting, it became the property of the association, and, an attack having been read upon this paper in an open session of the convention, it is our privilege to reply.

As readers of this paper are well aware, the two retail associations of the west decided in February last to affiliate for certain purposes, and they elected a joint executive known as the "Western Board." This "Western Board" affiliated for certain specific purposes with the Retail Merchants' Association of Canada and it was the duty of Mr. Coulson, as secretary of the Western Board, to keep in touch with Mr. Trowern, the Dominion secretary. Mr. Trowern laid stress last February upon the importance of securing the support and co-operation of the western merchants and the western merchants responded to the appeal.

In the months that have passed since the February meeting, several important matters have come up which would seem to demand the attention of the entire retail trade of Canada. Western merchants were anxious to co-operate with the trade in the east and Mr. Coulson wrote Mr. Trowern repeatedly, asking for information and offering assistance and support. But, strange to say, no reply was received until the day before the opening of the convention.

And what was the excuse for not writing? The first reason assigned was that certain articles had appeared from time to time in The Canadian Grocer and Hardware and Metal, and the second was that he thought it best not to disturb the slumbers of the western associations until the time of their convention. Surely these reasons are quite inadequate, but that is a matter for the associations to decide for themselves. The hard-headed business men of the west may require a lot of argument to persuade them that because Mr. Trowern does not like certain articles in the MacLean trade papers, he is therefore excused from answering his correspondence.

In the course of his letter to Mr. Coulson, Mr. Trowern went out of his way to attack the editors and management of the MacLean trade papers and also to discredit the Ontario Retail Hardware and Stove Dealers' Association. He made the statement that the Ontario organization had not been able to secure sufficient attendance at their meeting to elect five officers—a statement which is the direct opposite of the truth, but the motives for which will probably be well understood by the Ontario hardware dealers. In bombastic style he also proceeded to say that the trade in Ontario and Quebec are thoroughly aroused over the attitude of The Canadian Grocer and Hardware and Metal, and they are now taking up the matter with the Dominion Wholesale Grocers' Guild and with the Canadian Manufacturers Association, and he was perfectly certain that the MacLean Publishing Co. would have to change their plans. This statement is, of course, too ridiculous to deserve serious attention.

The MacLean trade papers desire only

the best interests of the retail trade and they do not propose to be frightened by talk of this kind. All honest and intelligent efforts to promote the organization of the retail trade for self protection will, as in the past, have the hearty support of this paper.

SPECIALIZE ON ONE LINE.

In one hardware store visited by a representative of Hardware and Metal recently the editor noticed that samples of nearly half a dozen makes of stoves and ranges were on display in the store. It is unlikely that many dealers scatter their resources so promiscuously, but it is true that too many dealers carry too many lines of heating and cooking goods. Dealers may please travelers by giving them an order for a few stoves after a stock of other lines has already been laid in, but it is poor business and it is doubtful after all if dividing a dealer's trade between several travelers makes real friends of any of them.

From a retailer's standpoint the evils of the practice are numerous. The purchase of many lines in small quantities means heavier freight in many instances and dearer prices in every instance. Merchants who buy one line in carload lots are bound to get better prices and pay much less freight than those who buy only a few samples from different manufacturers. The loss of time in bookkeeping must also be considered. Where one line is carried correspondence is diminished and accounts minimized. Instead of having half a dozen payments to meet only one or two will have to be looked after.

It is unsatisfactory also to have a customer come into a store and select a certain stove but want a size the dealer cannot supply. To have to switch from a talk on the good qualities of the Jones range to those of the Smith in order not to lose a sale is enough to try the temper and ability of a dealer.

Dealers who specialize on one or two lines, buy in large quantities, display their goods and start advertising a little ahead of the selling season and make a study of the lines they handle are the ones who secure the best results in selling stoves and ranges.

DARK PLACES IN THE CODE.

The absence of clear and definite intention in section 520 of the Criminal Code is causing Canadian wholesale merchants much expense and annoyance. They pointed this out to the Government months ago and asked, not that their association and its methods be declared legal, but that the act be made plain, that it be made to mean unequivocally what the Government thought in the public interest it should mean. They contended that everything the Grocers' Guild had done was morally and commercially above reproach. But what they asked the Government to do was to make the code plain and not a mere matter of opinion bandied between judges and lawyers. The jobbers have no desire to be lawbreakers, but as the code stands now the best lawyers in the country cannot tell them whether they are or not.

Under the circumstances it seems strange that the Government having had ample notice should allow the session of Parliament to conclude without any steps being taken to remedy the situation. It is a question affecting every business interest of the country, the right to trade organization and agreement.

Now comes word that Sir Wilfrid Laurier has promised that the Government shall take the matter up at the first session of Parliament next year and that he expresses the view that those engaged in business should have an equal right of organization with labor men. This is satisfactory so far as it goes, but why should the intention of the law be left in obscurity for a year ?

PROGRESSIVE POLICY NEEDED.

The Berlin Machine Company, Beloit, Wis., who have been negotiating with a view to establishing a large factory in Hamilton for the manufacture of woodworking machinery, have decided not to build in Hamilton until the city provides suitable sewer accommodation in the manufacturing district. It is but natural that a manufacturing concern should, before locating a factory, be sure of an adequate water supply, good fire protection and good sewer accommodation, nor is a manufacturing site complete without these. In the "eastern annex" the city has a splendid manufacturing district as far as natural qualifications, railway facilities, etc., go, this providing a strong inducement to manufacturers. Hamilton has gained a reputation for enterprise in securing and providing good accommodation for industries ; and in this case the progressive policy heretofore adopted will surely be continued. The industrial development of the city in the past has been a credit to the council and citizens, and certainly this development should not be allowed to receive the least set-back because of the lack of certain necessary expenditure.

It is a decided advantage to have a manufacturing district in a city, separated to a certain extent from the residential and business sections, and in the "eastern annex" the City of Hamilton has a means to that end, and it would be far from a progressive policy to stint the expenditure for sewer or other improvements if that resulted in the passing over by manufacturers of that section for sites in other parts of the city where the water supply and sewer accommodation are good.

SUMMER TESTS FOR FURNACES.

In a discussion on the subject of specifications or directions for testing furnace heating systems in Summer weather, in an American exchange, James H. Brown, Rochester, N.Y., submits the following scale used in specifications, without knowing its practicability or its origin.

0 degrees outside to be 70 degrees inside.

10 degrees outside to be 75 degrees inside.

20 degrees outside to be 81 degrees inside.

30 degrees outside to be 86 degrees inside.

40 degrees outside to be 93 degrees inside.

50 degrees outside to be 98 degrees inside.

60 degrees outside to be 104 degrees inside.

In the application of a test with this scale it will be readily understood that when the furnace is in operation under a good fire it must maintain a temperature within the building equal to that given in the right hand column when the outdoor temperature is that given in the left hand column. It will be noted that a greater difference between outside and inside temperature is required in the coldest weather, and the difference is steadily reduced from 70 degrees to 65, 61, 56, 53, 48 and 44 degrees, as the outside temperature rises. If this scale has been used and the user can testify to its correctness his remarks will be very welcome. Every observing furnaceman knows that a furnace run as it would be in Winter will raise the temperature in a building higher in mild weather than it would in Winter weather, and will give the scale at least his favorable consideration. No such furnaceman would expect as great a difference to be shown between the inside and outside temperature at the high outdoor temperatures as at the lowest. Doubtless the scale has been tested or it would never have been prepared, and whose who can testify to its value may be induced to do so by its presentation.

Resolve to do a larger stove and furnace business this Winter than in previous years and lay your plans accordingly.

TRADE PAPER ADVERTISING

By Converse D. Marsh

It is easy enough for anyone to record the fact that trade paper advertising has made material advances during the past ten years, and has made specially marked improvement during the past five years.

I do not believe that, notwithstanding all that has been done, a tithe of what is possible has been accomplished.

House organs flourish; special methods of advertising have increased appropriations to the detriment of the trade press, and back of all this, the large manufacturers throughout the country—capitalists who control—give scant attention to the question of trade paper advertising, and secretly have little respect for it, nor do these prime factors in the advertising appropriations believe that their interests can be materially advanced by liberal publicity in the chosen organs of their trade.

The impulse of every large publisher will be to rise up and dispute this statement, but if he does so, let our friend, the disputant, review the fact that trade paper advertising expenditures by our large manufacturers are but minute, fractional portions of the total sum expended for selling the factories' products.

In several instances of which I have knowledge, the large manufacturing corporations spend, for advertising appropriations, less than one-tenth of one per cent. of their gross sales!

Large fortunes are being made by publishers in the field of general publicity, while comparatively small ones are earned by publishers in the specialized or trade journal field.

The makers of the popular magazines can complacently cross their legs and say that this is not only as it should be, but that it is inevitable, while, on the other hand, trade paper publishers do not seem to have had the spirit to make matters better for themselves. They, too, believe that the comparatively small position that they occupy is a reasonable one.

Things are not reasonable, merely because they exist.

The complacency of the big brother may be all right, but I do not believe the acquiescence of his financially lesser kindred is.

A little seething unrest should stir the gentle soul of the trade-paper owner.

Why should the monthly, or weekly, created to amuse people, be a wonderful money maker while mainly it advertises cheap, inconsequential things, while the trade paper, the serious exponent of heavy financial interests, is relegated to an obscure corner in the congregation of publications?

The popular magazine reaches hundreds of thousands where the trade paper reaches tens of thousands, but the goods offered for sale, and really sold, through the influence exerted by many trade papers, largely exceeds the volume of trade sold through the influence of the prominent, popular magazines.

If Postum Post was at the head of some great steel company, wouldn't we see the fur fly in the advertising he did, say in the Iron Age or the Engineering Record?

If the General Electric Company was owned by the Uneeda Biscuit crowd, what a serious factor advertising in the Electrical World would become.

In the steel and iron business of this country I venture to say that the proportion spent in advertising to influence sales would be but an infinitesimal part of one per cent. of the amount of the sales.

Without the means of breaking into the archives of the gentleman who is swaying American breakfast destinies from the magical precincts of Battle Creek, I do not think I will be gainsaid in my estimate that nearly one-half of his total revenue is expended for publicity.

The sales of the General Electric Westinghouse, and the Allis-Chalmers interests alone, in the electrical world, must in combination represent over one hundred millions of dollars per annum.

I wonder, if the gentlemen controlling these electrical giants combined, are spending the insignificant sum of fifty thousand dollars per year with the trade papers?

Can it be that the seller of trifles, logically should spend hundreds of thousands of dollars, whereas, the really large business interests, having a much wider field, think they have exhausted the possibilities when they have expended a few pitiful thousands?

Does the reason for this lay accusingly at the door of either the trade paper publisher, or his customer, or should the burden of accusation be shared impartially by both. Somebody has got to shoulder it.

To my mind, neither the publisher, nor his advertiser, have yet grasped the latent opportunities that exist in trade paper publicity. It is the duty of the publisher to show these possibilities to the manufacturer if the latter cannot spare the time to study them himself.

In some lines, one single trade publication reaches practically every buyer in the field—every man who can influence an order—and yet the advertiser with millions of dollars of possible sales, is content to merely play with the trade paper advertising proposition.

What likewise shall be said of the lack of advertising by the thousands of smaller manufacturers of machinery who could be benefited even more than the few large manufacturers by a greater amount of, and more intelligent, publicity?

Speaking broadly, I don't believe that the presidents and board of directors of our average manufacturing corporations, give five minutes' heed a year to trade papers, or what the trade papers can do for them. They are content to spend a few thousand dollars in advertising account and let it go at that. They show that they have no respect for their publicity departments, because the salaries of the managers of such departments are invariably the lowest paid heads by many thousands of dollars of any departments maintained, and the advertising counsellor is indeed a rara avis.

They think enough in other directions about making sales, but no single force in the trade paper field has yet grappled with them, struck them squarely between the eyes, and made them sit up and take notice that a great force was at their door—a wonderful force and factor that could be utilized in increasing their sales. Because in the multitude of their duties the heads of manufacturing organizations omit any consideration of advertising, will the publishers of the trade press be content to maintain the position allotted them?

Let the trade paper brother gird up his loins, and himself carry the war into Africa, if I may be allowed to so quickly shift my suggestion.

In plain, practical, every-day English, I would say that it is up to the trade paper publisher to himself devise selling plans through publicity, and bring them to the attention of his customers, big and little.

Then too, let him make his reading columns more attractive to the real people who buy the kind of goods that his advertisers have to sell. This makes an abrupt termination but it contains enough of thought to induce me to cease writing.—Printer's Ink.

PROFITS ON FURNACE CONTRACTS

By F. G. Schafer, Youngstown, Ohio. Reproduced by request from Hardware and Metal July 15, 1905

Now that the stringency is past, and everything points to at least three or four years of normal business conditions, is it not well for furnace dealers generally to consider the question at the head of this article? There are certain lines of trade in which this question is never seriously considered, as there seems to be an "unwritten law," or tradition, or custom, regarding a minimum of profit beneath which no self respecting, and certainly no successful, dealer will figure an estimate. For instance, in the shoe and clothing trades a profit of from 25 to 33 1-3 per cent. is considered not only proper, but entirely reasonable, while $100 net still remains the standard or average profit on the sale of a really good piano. While human nature is such that each tradesman considers his own particular business as entitled to a profit slightly better than the average, yet a furnace dealer would be entirely justified, and still remain consistent, by applying this rule to his own estimates. When a piano dealer sells an instrument, even of an average quality, there is scarcely one chance in 100 that he will ever have any ill will or complaints or a lawsuit on his hands because of it, and even when it requires tuning the purchaser does not look to the dealer to do it free.

This same rule applies to almost any other mechanic except a furnace dealer, who, unlike the mason, painter, roofer or carpenter, cannot be sure that he is through with his job when he packs his kit and turns his back upon it. Unlike almost any other article in the building trades, a furnace dealer's product is subjected to the greatest destroying element in nature, fire; besides which fully nine-tenths of the success of his job depend upon conditions outside of the furnace itself. The writer is fully aware that the strong claims made by the manufacturers for the better grades of furnaces are quite true, provided the owner allows, or cellar partitions permit, its proper location and the attendant gives it proper attention. But how often is this the case? Is it not true in thousands of cases—yes, in the great majority of sales—that the purchaser retains a string around the dealer's neck for years after his job has been installed? Another element to be taken into consideration is that a furnace dealer, more perhaps than any other tradesman, takes his reputation in his hands the moment he enters this business. Indeed, it has been said that even if a dealer in furnaces were as honest as Job he could not sell 100 furnaces to 100 different persons and retain a reputation for common honesty in the minds of all of them.

Unfair Risk Compelled.

No matter how good a cast iron fire pot may be constructed it is a well-known fact that its life, especially with soft coal, is as problematical as that of a lamp chimney, which may crack the day it is bought, or last for years. I have in mind an unusually thick and apparently durable fire pot (20 inch, weight nearly 400 pounds) which cracked and sent volumes of smoke into the rooms during February of the second Winter. Hundreds of dollars' worth of these furnaces had been sold by this dealer previously, some to intimate friends, a number of whom had similar trouble. And they speak of this dealer in the same vein as one would of a thief or confidence man. Yet the dealer was just as honest in his intentions as the man who placed the slate roof on his customer's residence and who retained the owner's good will, simply because slate is not subject to wear, while a furnace is.

Is it any wonder, in view of these things, that many hardware dealers positively refuse to handle furnaces for fear that this addition to their business will "queer" their other lines? How often are furnace dealers called out in zero weather to pacify furious customers, only to find out that clinkers have not been removed or the cold air slide is not properly adjusted. Or probably the customer himself insisted upon a poor location for the furnace or registers, for which error the customer rarely blames himself when Jack Frost compels him to be up against the fruits of his own folly.

Unreasonable and Unprofitable.

Some time ago the writer was berated for refusing to send a man, free of charge, at a cost of street car fare and nearly a half day's time, to instruct a user of his furnace, this man having bought the house five years after the furnace was installed. Some time later a housekeeper threatened by telephone to "tell her neighbors what kind of a man you are" unless the dealer would clean out her furnace of soot free of charge. On another occasion a customer asked for a man to fix his chain which the children had disarranged or broken, and to do this free of charge, although it meant 20c. street car fare, a trip of 5 miles, and one-half day's time of a workman.

Recently a notorious "Cheap John" furnace dealer was considerably puffed up by the fact that he had sold 112 furnaces in 1903 and about 100 in 1904, and did not seem to realize that the number of dollars he had earned was of more importance to him than the number of sales he had made. This man has no financial standing, drives a horse and wagon that would do credit to the average rag peddler, and gets as little as $27 worth of pipe by freight c.o.d. Last Summer even this small lot of pipe was allowed to lay in the freight house for nearly three months until 75c. storage had accumulated. Finally the manufacturers arranged with another dealer who did not sell one-third as many furnaces, but who had a gilt-edge credit, to take the goods at three-fourths of their value rather than be forced to pay the freight both ways.

Price and Profit Too Low.

Fellow furnace dealers, it is not time to call a halt on "Cheap John" profits in this business, in which more than in any other, it is impossible to please all, and in connection with which are so many unpleasant and worrying features, due largely to the purchasers themselves? One of the most successful dealers the writer is acquainted with says: "Irrespective of the grade or price of a furnace contract I look upon every sale as a proposition in which I may look for some annoyance or loss of time, due to the carelessness or laziness of the users themselves, and that each contract should net an average of $66.67. I set this odd figure, which is two-thirds of $100, so that it is an easy matter to get a rough estimate of my profits, as every third sale means a profit of $200." Inquiries among other dealers of the better sort shows that, with the exception of sales to real estate firms, the minimum of profit on any contract direct with the user should never be less than $50.

Furnace dealers should realize than an unreasonably low estimate is an injustice to their fellow competitors and that a contractor as well as a laborer can be a "scab" in the trade. To bring about better prices, however, every dealer should use his influence to educate the buying public in the fact that it does not pay to give up less than three figures for a furnace job, or as the couplet puts it:

To make it pay you in the end,
Over one hundred you must spend.

The writer trusts that this article will call forth others on this vital question to the trade. At all events, if it will cause a certain class of dealers to stop for a moment and do a little thinking it has not been written in vain.

THE TRADE IN TWIN TOWNS.

The hardware trade in the twin towns of Port Arthur and Fort William is, according to appearances, on the eve of an era of unprofitable competition unless something is done to develop a more friendly and fraternal spirit amongst those engaged in the trade in the two thriving towns.

Lying at the head of lake navigation a bright future lies before the towns. Which is to have the advantage in the future is, of course, uncertain, but it is likely that before many years the towns will grow together, and the three miles of factory and town lots intervening will be taken up and one large united city result. In the matter of residential location, Port Arthur occupies the most favored site, it being on a hillside, while Fort William is on low-lying ground more favored for industrial purposes.

With populations about equal, Port Arthur has two hardware stores while six are doing business at Fort William, with another small stock at West Fort, a suburb two miles west. At Port Arthur, Wells & Emerson and Marks, Clavet & Dobie carry stocks worth from $80,000 to $90,000, both stores being first-class in every particular, with well-dressed windows and neatly arranged and roomy interiors. The latter firm do a large retail and jobbing trade in groceries in addition to their hardware business. They have a large warehouse capacity but are adding to it by erecting a new three-storey building for storage purposes. Mr. Emerson, whose firm also does a large jobbing trade, in conversation with Hardware and Metal, agreed with the view expressed in the first paragraph, adding

that while his firm had done a business of about $54,000 greater in 1905 than in 1904, an increase from $150,000 to upwards of $200,000, profits had decreased sixteen per cent., and he looked for a similar increase in the business volume and decrease in profits this year. In addition to the two firms named, two tinsmiths, A. Clavet and J. W. Barnes, carry housefurnishings and stoves, the latter also doing a first-class plumbing trade.

Fort William has been satisfied with three hardware stores up to the present Summer. W. S. Piper, the Fort William Hardware Co., and J. & T. Piper all having old-established businesses. Three months ago, however, Bert Gerrie, formerly of Wingham, Ont., joined his brother, who had been clerking for the Fort William Hardware Co., in establishing a new store, and this was followed by the Northern Engineering & Supply Co., J. T. Armstrong, manager, who commenced by making a specialty of heavy goods, valves, electrical, steam and boat supplies, adding a stock of builders' hardware, and by the Coslett Hardware Co., who are doing a builders' trade from a warehouse, although their store building is not yet completed. Piper, Hogarth & Piper, at West Fort, and W. H. Smith, tinsmith, Fort William, are also factors in the trade, while stocks of enamel and tinware are also carried by several groceries.

In addition to this competition the twin town trade is being cultivated by Toronto retail jobbers' list houses who are selling nails at the upper lake towns at $2.10 base, while the price to the retailers is $2.15. Lock sets, etc., are also being sold to consumers in large quantities. Still more competition is felt by the trade owing to the sales to consumers by regular jobbers, one instance being where a Winnipeg jobber took an order from an elevator company for certain goods, nails being sold at $2.10 in order to get the business. Retail prices have, on the whole, been held firm until recently, sample prices being $3.25 for nails of standard sizes and $1 for lanterns. Nails are being cut down to $2.75 now, however, and screen doors are also said to be being subject to a considerable cut in some stores. An association of builders and hardwaremen has not succeeded in keeping prices at the old figures, and while there are members of the Ontario Retail Hardware Association in both towns some are holding out, and unless the dealers get together matters are likely to go from bad to worse.

The Fort William Hardware Co. have planned to erect a new store building this year but are still in their old quarters. With the many new dealers preferring to risk over-competition in Fort William to opposing the very strong Port Arthur houses, the new building may be delayed until next season.

W. J. Copp, Son & Co., have an excellent site for their stove foundry, being located on both railway and electric lines, besides being close to the river, about half way between Fort William and West Fort. Located at the head of navigation and in a favored position to secure raw material, the Copp Co. should be able to secure a large share of the trade from Manitoba and the new provinces.

CATALOGUES AND BOOKLETS

When sending catalogues for review, manufacturers would confer a favor by pointing out the new articles that they contain. It would assist the editor in writing the review.

By mentioning HARDWARE and METAL to show that the writer is in the trade, a copy of these catalogues or other printed matter will be sent by the firms whose addresses are given.

Clare Bros.' Furnaces.

A warm air furnace catalogue just issued by Clare Bros. & Co., of Preston, Ont., has found its way into our hands. In addition to descriptions of their various styles of furnaces, it contains chapters on warm air furnace installation, chimney flues, furnace management and a number of rules and tables with which every heating contractor should be familiar.

The catalogue is a handsome book of forty-eight pages and measures 6 x 9 inches. It is printed on heavy tinted paper and the typesetting is clean and the illustrations clear cut.

The place of honor is given to the well-known Hecla furnace, which is described in such a way as to emphasize the excellence of its design and the careful workmanship employed in its construction. Some pages are devoted to a discussion of the patent fused joint, which is used exclusively by Clare Bros. & Co. They argue that this is the only permanently tight joint between iron and steel and they attribute much of the success of the Hecla to the results obtained with this joint.

The Hecla side-wall is a new register which has just been completed by this firm, and they show it in seven sizes. It is claimed that it can be placed in position with less trouble and in less time than any other register made.

Clare Bros. & Co. have their foundry located in Preston, Ont., where they carry a large stock at all times. At Winnipeg a branch warehouse is under the management of Clare and Brockest. and stocks are carried by Cunningham & Worth, at Vancouver, B.C., and the Mechanics Supply Co. at Quebec P.Q.

New Kelsey Booklet.

The James Smart Manufacturing Co. have out a new booklet on the Kelsey system of heating and ventilating. It is neat and comprehensive and besides illustrating the Kelsey system, gives valuable suggestions and hints to those engaged in such work.

AGENT FOR ENGLISH FIRM.

Alexander Gibb, 13 St. John street, Montreal, has been appointed agent for Thos. W. Ward, Albion Works, Sheffield, England. Mr. Gibb will represent this firm in Quebec, Ontario and Manitoba. These people are large exporters of wrought iron scrap, old wrought iron, puddled bars and billets, their business being entirely in semi-raw material, which is used for the manufacture of finished goods. They do considerable business in breaking up old men-of-war, battleships and cruisers, and in consequence have a lot of gun metal, brass, etc., to sell. Thos. W. Ward Co. are also open to do business through Mr. Gibb in Canadian products, such as ores, nickel, aluminum, lead, old rails, iron railway axles, scraps from horse nail manufacturers, etc., mica and asbestos.

TRADE INQUIRIES.

Correspondents desiring to get in touch with any of the firms referred to should quote the reference number when requesting addresses. For information write to Superintendent of Commercial Agencies, Department of Trade and Commerce, Ottawa.

888. Machine tools, etc.—A Yorkshire engineering firm manufacturing all classes of high-class machine tools, lathes, shaping, planing, shearing machines, desire to open up negotiations and invite correspondence with Canadian buyers.

889. Worsted yarns.—A Yorkshire firm of worsted spinners ask to be put in communication with Canadian buyers of worsted yarns.

890. Machinery.—A Yorkshire firm invite correspondence with Canadian firms interested in machinery for cutting and straightening wire, wire drawing and wire forming, and all machinery used in wire manufacture.

891. Girders, etc.—A Yorkshire firm manufacturing all classes of locomotive, agricultural and stationary boilers, oil and water tanks, girders, etc., invite correspondence with Canadian buyers.

892. Wire.—A Yorkshire firm of wire manufacturers of all descriptions, ask to be put in touch with Canadian buyers.

ANOTHER FIRELESS STOVE.

A fireless stove, it is reported, has been perfected by C. W. Reynolds, of the Reynolds Refrigerator Co., Omaha, Neb. The device consists of an air tight metal receptacle, surrounded by air tight compartments and layers of mineral wool, both of which are non-conductors of heat. When meat, vegetables or anything in the roasting or boiling line is to be cooked it is placed on an ordinary stove or range for a few minutes until it is heated to the boiling or roasting point. It is then placed in the fireless stove and the air-tight cover is put on. The original heat is retained in the compartment and the food is entirely cooked without further use of fire. The stoves, it is stated, will be placed on the market.

NEW MANUFACTURERS.

The Bowman Gas Range Co. have recently commenced the manufacture of gas ranges at 103 Lisgar street, Toronto. Although but a new concern they have met with exceptional success with their ranges, and intend ultimately to make water heaters, radiators and gas grates. H. H. Bowman and W. J. Hallorn, both men of practical experience are at the head of the company.

WHO MAKES MICA?

A subscriber writes: "Can you give me the address of the concern making mica at Buckingham, Que.?

EXISTING CONDITIONS IN STOVE TRADE

At this season of the year it is opportune to review the conditions existing in the Canadian stove trade as regards the new improvements made, the demand for the various lines of heating and cooking goods manufactured, the forms of competition being felt amongst the trade, the cost of manufacture and the profits secured by retailers. A number of prominent Canadian stove manufacturers have been asked to express their views on the subjects enumerated and a few of the replies are reproduced below.

With the exception of the new lines made necessary by the increased use of natural gas, there does not appear to have been many new features embodied in the goods offered to the trade by the founders, and prices have been held close to last year's figures in spite of the advances made in cost of manufacture, largely because of the considerable stocks held over by certain manufacturers and dealers owing to the mild Winter.

There seems to be a general demand for the lower priced lines although the dearer goods are finding a ready sale. Some differences of opinion exist as to the continued measure of popularity likely to be enjoyed by steel ranges, the comments of the manufacturers being divided on this subject. To meet the competition of departmental stores and mail order houses dealers subject to competition from these sources must carry a line of cheap goods. It is far preferable, however, not to endeavor to sell them, but to put all energy in talking the quality of the better grades and using the cheap line on the floor as a "horrible example" of the output of the "cash in advance" mail order concerns.

Competition of Peddlers.

While it appears that the stove peddlers are not gaining much headway and the tendency is undoubtedly more towards the volume of business going through the regular trade channels, the peddlers still sell a lot of ranges. With ordinary enterprise in advertising the regular dealer should have no difficulty in competing successfully with the peddler, as he can sell more cheaply and talk more forcibly regarding repairs than the peddler. In California a law calling for the payment of a business license has put this form of competition completely out of business. Exhibits and demonstrations are probably one of the best methods of combating either catalogue house or peddler competition as this form of advertising is particularly effective in reaching the housewife and building up confidence in the local dealer.

Fair Margin of Profit

As better prices can be secured on good ranges than on the cheaper lines it is good policy to push the best articles. Dealers too often sell on too close a margin, not figuring sufficiently for the time occupied in setting up the stoves for display as well as assembling them in the customers' homes after a sale is made. One Ontario dealer last season arranged with his foundryman to sell him a quantity of stoves with a special brand name. The line cost no more by taking the quantity, but they were well advertised and brought $5 more each, the dealer realizing over $200 after covering all expenses. A fair margin of profit is necessary in handling such a bulk line as stoves and ranges, and if a dealer keeps a reputable line in a clean and attractive store with everything bright and shiny, few customers will balk over paying a good price.

* * *

The letters received from the stove manufacturers follow :

From the Burrow, Stewart & Milne Co., Hamilton, manufacturers of Jewel stoves, ranges, furnaces and gas ranges :

"We are making an entirely new line of cooking ranges, heating stoves and burners for natural gas. We are continually making new patterns of stoves and scales, but we are not introducing any radically new features, as you put it.

"Trade is better this year than ever before. We think that on account of the large number of heating stoves carried over by retail dealers last season that the demand this year for heaters will not be so great, unless the cold weather begins early in the season. If we have an early Winter we shall be able to sell all the heaters we can make,

"Prospects for trade in the great west this Fall are good, notwithstanding American competition. We have booked a large number of orders, and are shipping goods as fast as we can get them ready. It is a pity that our Government will not do something to stop this American competition, as American firms are selling goods in the west at any price they can procure, and seem determined if possible to capture the trade. The only thing would be for the Government to put on an increased duty —a specific duty rather than an ad valorum duty.

"At present the demand is for steel ranges and furnaces and for the cheapest stoves that can be made. We speak of the western demand, and this demand for cheap goods comes from the new settlers, who are starting housekeeping and want to do it in the most economical manner possible. In a few years all these people will require better goods, but there will always be a demand for the cheap goods while the country is filling up. We do not believe that the demand for steel goods will be long maintained. Steel goods are not so durable or so satisfactory as cast iron goods, and we believe that in a few years the tide will turn, and the demand will again be for good solid cast iron stoves and ranges.

"Prices have hardly advanced proportionately to the increased cost of labor and raw material. The profit to the manufacturers is not nearly so large as it ought to be, but we believe that nearly all the retailers in Ontario, Quebec and the west get a good fair profit on all their sales."

* * *

From the D. Moore Company, Hamilton, stove founders and manufacturers of tinners' supplies :

"We understand that ordinarily there is a fair amount of stoves carried over from last season although we do not consider that same is going to effect our business to any appreciable extent as our travelers advise us that there is only a limited number of Treasure stoves carried over, and we not only anticipate the largest business we have ever done this coming Fall, but we expect our year to be the largest we have had in our history. This is what present conditions indicate and applies not only to the Ontario and Quebec market but also in the western market.

"Our experience is that the competition from the United States manufacturers is not so very great when the quality of the Canadian-made goods is considered, for as a rule we find the United States goods are cheaper and rougher made, although there are heavy shipments being made of same into the west, and no doubt the import is aided from the fact that there are so many United States settlers going into the west.

"We find an increasing demand for steel goods, although the trade is good with regular cast iron stoves and ranges.

"In spite of the fact that there has been considerable increase in the cost of labor and raw material and while there have been some revisions in price this year, there have been practically no changes made in selling prices."

From the Telephone City Stoves, Limited, Brantford, manufacturers of air-tight, top draft wood and coal stoves and oven attachments :

"As we only make a line of sheet iron heaters we can not answer some of your questions. We are not introducing any new features this year. The condition of trade is not nearly so good as usual, in a large degree because dealers are carrying heavy stocks from last year and are not disposed to purchase many stoves even though their stocks are light. In our line the dealers have the best end of it as our margin is fine."

* * *

The McClary Manufacturing Company, London, manufacturers of stoves, ranges, furnaces, enameled and tinware :

"We have added a number of improvements to different lines this year, including a feed pouch and new dress to our Kootenay steel range, patented emery rod and nickel plate above the hearth plate to our Pandora range, and a new dress to our air-tight heaters, and a number of other minor changes.

"In addition to the above changes we have placed on the market a complete

line of new gas stoves, a new side wall register which we have had patented, and a new line of furnaces for soft coal.

"Our new gas stove, the Caloric, is equipped with all the latest improvements, including a safety lighter, counterpoise oven doors, sectional removable burners, enameled door linings, steel lined ovens, regulating needle valves, etc. It is made in a dozen or more different styles, with low and elevated ovens, with and without broiler, elevated oven and leg base, with and without nickel dress, in large and small sizes, and for both natural and artificial gas.

"The feature of our new side wall register is that a furnace man can complete the job of installing a furnace in a new house in one trip, which saves the loss of time caused by second and third trips to finish a job. The wall frames can be left ready for the registers, and these can be screwed on by the customer or carpenter after the plastering and carpenter work has been finished. The registers will not then be defaced by plaster and building operations. When used in old buildings, the frame is wide enough to cover the ragged plaster, which of course is a strong point.

"A furnace for the exclusive use of soft coal requires special construction to withstand the fierce fires and long forks of flame produced by the peculiar qualities of soft coal, and to extract all the heat from the fuel consumed. The Sunshine is constructed on similar lines to our cupola for melting iron, in which the most intense heat is generated by a forced supply of air mixing with the gases and producing absolutely perfect combustion. To do this we have two supplying inlets through which the air is forced into the hot blast chamber formed by a hollow cast iron ring, which fits between the top of the fire pot and the dome. When heated to a great degree, the air rushes through perforations in the ring into the fire chamber and mixes with the gases, causing perfect combustion of both smoke and fuel. The radiator is cast in two pieces and bolted together on the outside, leaving no obstructions on the inside to clog up. The sides being perpendicular, are self-cleaning. There has been a big demand for this furnace and already it has proven a success.

"Trade this year already shows a considerable advance over the same period of last year, and the indications are that the Fall demand will also be very much heavier.

"We carried over very little stock from last year and have felt no effects from that carried by other manufacturers.

"Already the indications from the west are for a heavier demand than last year.

"The stove peddlers by their energetic methods are getting a lot of business, but they sell mostly to people who do not need stoves, and would not buy without being 'talked into' the purchase, consequently we do not feel this competition to any great extent.

"We find the demand in the older parts of the west is for an expensive, well-built steel range; in the newly settled parts for a small, cheap stove, and in the middle and eastern provinces for a handsome, well finished cast range.

"It is hardly possible to advance prices in proportion to the increased cost of labor and raw material, although a slight advance has been made on a number of lines this year.

"We think the retailer gets a very profitable margin on his stove sales, particularly when one considers the small stock—practically only a sample of each line—which it is necessary for him to carry. From the heavy stocks carried by our various warehouses in different parts of the Dominion, quick delivery can be made to almost any point, and the retailer takes advantage of this to carry a very small stock, relieving him of the necessity of locking up a lot of money in goods."

AMERICAN STOVES IN THE WEST

American competition is a factor with which Canadian manufacturers of many lines of goods are forced to reckon very seriously in the struggle for the Western Canada market. There is keen competition in many lines, but perhaps in no other is the race for trade more interesting than in stoves and ranges. The western market is calling for ever increasing supplies and it is demanding more and more of the attention of Canadian manufacturers. New factories have been built in Eastern Canada and extensive additions have been made to old foundries in order to supply the demands of the newer Canada. The American stove manufacturers have established agencies in Winnipeg and are doing their utmost to push their Canadian sales.

Increased American Imports.

A glance at the statistics of the customs house shows the steady growth of American stove imports. The total imports of stoves from the United States amounted in 1900 to $129,676, in 1902 had increased to $172,791 and in 1904 were $365,997.

The Causes.

These figures indicate a steady growth of the American stove trade in Canada and this trade is confined almost entirely to the west. What are the causes responsible for this growth?

Inquiry reveals two main causes for the growth of American stove trade in the Canadian west. In the first place one should consider the nature of the population. From June 30, 1905, to June 30, 1906, 212,590 Americans came to Canada as settlers from the United States, and, almost without exception, these people found homes in the west.

Now, what does this mean from the standpoint of the American stove manufacturer? It means that a very large proportion of the population of the Canadian west have always been accustomed to using stoves of American manufacture and it is easier to sell them goods with which they are familiar than goods with which they are entirely unacquainted.

Perhaps there is no article in the entire household about which the average housewife is more particular than her stove, and if the American housewife was satisfied with a particular make of stoves in the United States it is easy to sell her the same stove in Canada and difficult to persuade her that any other make is equally as good or superior to the stove she has always known.

It follows, therefore, that the American stove manufacturer whose stoves have been on the market for a number of years and who makes a really good stove that will stand the test of long usage, possesses a very considerable advantage in the Western Canada market. His stoves are already regarded with favor by a large proportion of the Western Canada consumers and it only remains for him to secure the co-operation of the hardware and heating trade and to push sales energetically.

Demand Exceeds Supply.

The second cause of the rapid increase in the sale of American stoves is the fact that for several years the demand has been greater than the Canadian supply. The country at large, and particularly the western portion, has grown more rapidly than the Canadian stove industry, although it has made big strides in recent years. Stove dealers complain that they have often been compelled to wait months for their stoves and that rush and repeat orders could not be filled promptly. Under these conditions they sought relief by buying American stoves.

A Mail Order House.

During the last few months a mail order stove business directed from Winnipeg in the interests of an American foundry has come into some prominence. As yet it is only in the experimental stage and it is impossible to say just what will be the final outcome of this new departure—new for Western Canada.

It would be impossible to make any general comparison of the relative merits of the Canadian and American stove. Perhaps the American manufacturers as a rule lay more stress on the finish of their goods than do the Canadian, but even that comparison might be disputed. Certain it is that the Canadian stove does not suffer by comparison with its American rival and as Canadian foundries increase their output there will be a sharp struggle to stop the increase of American stove sales in Western Canada. Until the Canadian output is greatly increased, the present duty of 25 per cent. will not be sufficient to prevent the increase of the American stove trade.

THE OLD-TIME FIREPLACE.

The stoves an' the steam heat "git" me
These wearisome wintry days!
Gimme the old-time chimbly,
The backlog an' the blaze!
I want to sit where the oak-fire gleams,
An' tell old stories, an' dream old dreams!

The steam heat—it says nuthin',
The stove hides dreams from sight;
But the flames of the open fire
Sing songs of a Winter night!
Settin' there, where the bright light streams,
I tell old stories, an' dream old dreams!

Youth comes back with its roses
As I dream by the fireside late,
The face of the old-time sweetheart
In the starlight at the gate!—
Old times, old loves, in the firelight's gleams,
The old sweet story, the old sweet dreams!

FRANK L. STANTON.

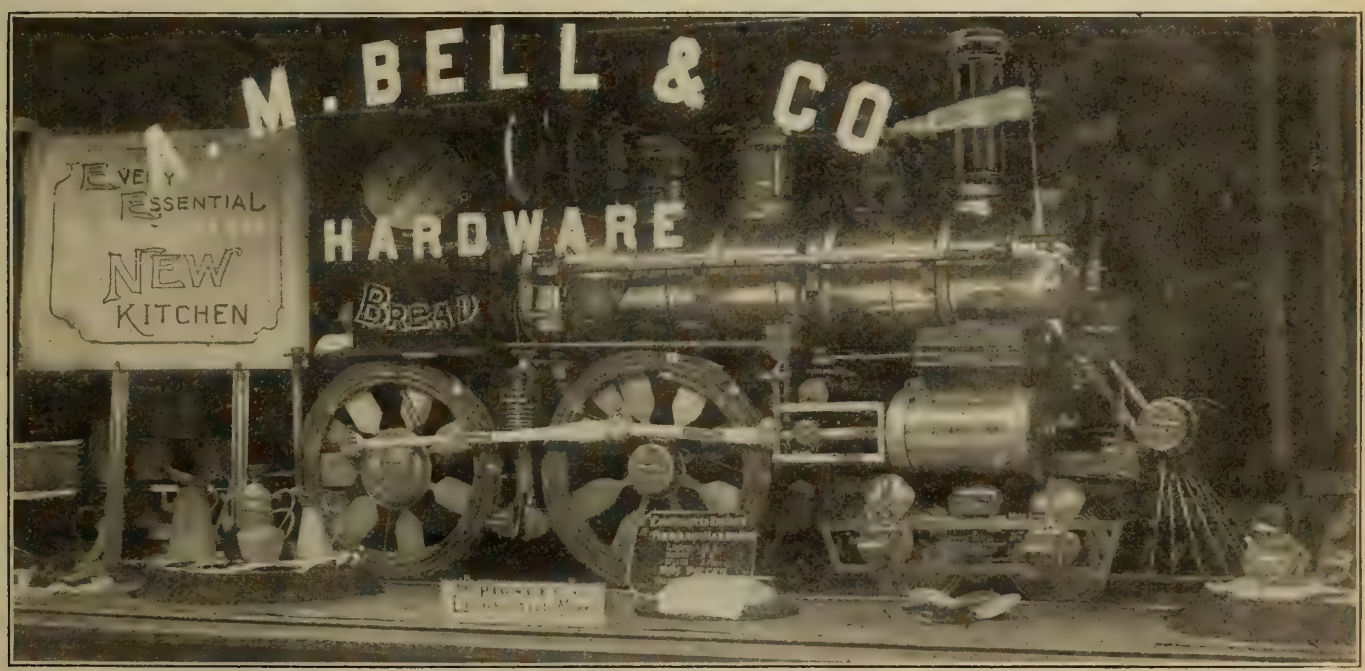
WINDOW AND INTERIOR DISPLAYS

A RANDOM SKETCH

Sydney Arnold in the American Artizan.

John Tommirot, a tinner at Nevergo-near, Iowa, walks down the street and sees a splendid window display in the five and ten cent store. "And why haven't I a large front window in which to show my stoves, baking ovens and kitchen cutlery?" he asks himself. He goes home and telephones the town painter and the town carpenter. He finds a new window will cost in the neighborhood of $225. "Ye gods and little fishes! The brick wall will do." And people passing in front of Tommirot's establishment have to go inside to see his wares, as in the past.

Fred Holditin has a small clerk and a hardware establishment at Oldbuckville, Indiana. His place is small, but he has the best class of goods and knows more about hardware, stoves and tinsmithing than any other man in the county. He has an old suit of clothes that he has worn for the last thirteen and a half years and that he still wears when called to put up a stove pipe or when selling imported enameled ware to Mrs. Uptodate of the Town Castle. Mr. Roundthecorner, his rival hardware dealer, has a larger establishment, but sells cheap enameled ware for the best brands of imported. He sells a cheap steel range as the best on earth. He not only makes a bigger profit than Holditin, but he effects four times as many sales. He looks neater and his establishment is as clean as a Dutch woman's dairy. Holditin went around to see Roundthecorner one day and envied his tailor-made suit and his patent leather boots. He went to see the latter's tailor the same afternoon and discovered that a suit like Roundthecorner's cost $40. Patent leather shoes were worth $6 or $7, so Holditin bought not and continued as perviously.

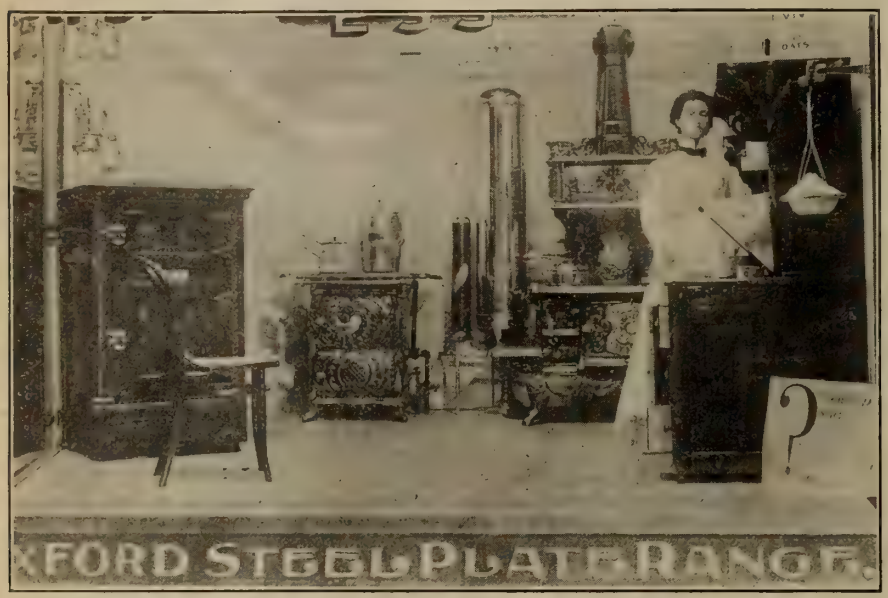


Thomas Skinflint is a heating expert. Eight or nine years ago he bought a number of direct draft furnaces. He sold twelve the first year, three the second and one in each of the succeeding years. Meanwhile another furnace man in the same town was selling and installing new improved furnaces that increase combustion and decrease fuel. Skinflint's were being stored in the back part of his establishment, taking up more than one-half the room. Every one that he installed proved unsatisfactory. What was Skinflint to do with the residue? He thought it over. They were selling at prices way below cost at the time. Not even reduced prices could create a demand. The manufacturers would not buy them back. He determined to keep them. They were too good to be thrown to the scrap pile.

Sam Squeezithard has an immense pile of scrap tin in the back yard of the sheet metal plant at Conservatism, Kansas. Once every six months Sam has a call for a piece of tin just about the size of some that he has in the pile. Every six months the scrap pile comes in handy, so Sam continues to make it larger and larger, and the property on which it is located is sold at $400 a front foot.

Joe Neverspend is located round the corner, down the alley, the first door to your right in the rear. Joe has from three to six customers a day. He walked down Main street recently and counted the people passing a certain corner. He found that there were eighty-nine every three minutes. No one ever went near Joe's establishment except when they had to. Joe went around to see a real estate man and priced property. The corner, on which Joe had counted eighty-nine customers, rented at $450 a month, so Joe stayed where he was.

Walter Thrifty is a tinner. He does a pretty good business and has four assistants. About twenty years ago he bought two fire pots. They were good fire pots at the time. They were made to last and they did last. His assistants always carry around a box of matches, a crow bar, a sheet metal cylinder, to be used as a screen, and a bellows, when they expect to use these fire pots. They are twenty years old. Thrifty could use two cornice brakes. Instead of that he made a contrivance of his own a good many years ago and has dickered with it a hundred times since. With two good fire pots and one real cornice brake, Thrifty could get along with two men and a boy. But Thrifty comes from good, old, conservative, provident ancestors, and he hates to see the shekels flow.



Alex. Tightwad started up in the

Window Display of Cooking Utensils for June Brides

hardware business in a good sized New England town in the early seventies. He has been at the same location ever since. Along about 1880, Tightwad bought the property on which his store is now located. It was a good investment. It was on Main street, near the corner of State, the intersection of the two busiest thoroughfares in the town. Next to Tightwad is a department store. On the other side is a drug store with a soda fountain, cigars and cigarettes, prescription department, all spick and span. In thirty years Tightwad has accumulated an awful bunch of truck. It would take four men and a horse just about four years to sort it out properly. Tightwad knows what good shelving looks like. He has seen it at Ernest's store in the capital of the state, but Tightwad knows that it costs ninety cents per lineal foot, that it would take a long time to arrange the stock properly, and decides to get along with the junk heap.

The Pennsylvania Railroad typifies progress and success. It is about to send twenty thousand serviceable freight cars to the scrap heap as fast as possible. These cars will be replaced by cars made of pressed steel—the most advanced type in perfection of equipment. They know that the relegation of these cars to the old material dealers is a good investment. It is in line with their policy of the past. Is it hard to explain why some people are successful and why others complain of present unprofitableness in business, of the retail catalogue houses, of unrestricted prices, of direct dealings between manufacturers and consumers, and so on?

June Bride's Kitchen Window Display.

INGENIOUS WINDOW DISPLAY OF TINWARE.

June is the month of weddings, and while most window displays arranged to catch the trade of newly married couples are devoted to silverware, cutlery, and other articles suitable for presents, a departure was made from this in the locomotive tinware display shown in the accompanying engravings. The display was arranged by S. S. Wetmore, traveler for A. M. Bell & Co., Halifax, who visited the Intercolonial Railway depot and made a thorough sketch of the modern locomotive prior to planning and constructing the locomotive shown, which is made entirely of tinware and hardware, 231 separate articles being used in the construction, all of these parts being wired and soldered together, the total value of goods damaged in the display amounting to only 14c. The locomotive was 10 ft. in length by 5 ft. 4 inches in height, and 3 ft. in width.

The background and end of the window containing the display of kitchen furnishings for June brides, were draped with dark colored hammocks, while the side of the window was covered with rubber door mats, representing concrete. The railway tracks were lifted 1 inch, with a black margin at either side to give relief to the track. On the left side of the locomotive stood an easel supporting an artistic sign reading as follows: "We carry everything essential to furnish the new kitchen," the sign being done in relief and flat alabastine, surrounded with a gilt frame and decorated with white ribbon bows, similar bows being attached to the prominent parts of the locomotive. The space surrounding the other end of the locomotive is occupied with high grade enamel ware, one and two with oil stoves, and other kitchen utensils. Above the locomotive was arranged a sign containing a topical local hit, reading. "The first board of trade industry. A. M. Bell & Co., nonsubsidized locomotive works; engines constructed on the premises while you wait." The articles comprising the display were as follows:

2 stove boards, 3 waiters, 2 oil stove ovens, 3 coils hose, 9 patty pans, 1 egg beater, 1 pint cup, 2 conductor elbows, 1 milk pan, 1 fruit press, I milk skimmer, 2 creamers, 2 door stops, 2 dampers, 2 clamps, 1 A B C plate, 1 carriage lamp, 1 covered pail, 2 transom lifts, 2 ox knobs, 3 bread boxes, 2 kettle covers, 12 fuse tubes, 25 butter spades, 3 knobs, 1 lamp heater, 3 cake pans, 4 funnel tubes, 2 stair rods, 1 stove toaster, 12 stove lifters, 7 dripping pans, 5 creamer taps, 4 cake pans, 9 pokers, 1 dish pan cover, 11 pipe collars, 2 brackets, 2 levels, 2 meat saws, 1 cake closet, 14 lamp collars, 1 trivot, 6 pie plates, 1 lamp top, 2 jelly molds, 3 powder cans, 4 vegetable presses, 2 cake turners, 10 chain links, 4 pot covers, 2 cages, 2 filters, 2 stove pipes, 2 table mats, 4 graters, 4 hoop irons, 3 axe handles, 2 planes, 2 steel squares.

TWO GURNEY OXFORD DISPLAYS.

The views of the interior and window displays in the Gurney Oxford Stove & Furnace Co.'s store at 231 Yonge street, Toronto, are excellent examples of effective arrangement for the sale of heating and cooking goods. The window dresser has his "dummy" a trifle overdressed for work in the kitchen, but as she is apparently laboring under favorable conditions with such modern conveniences as a kitchen cabinet, refrigerator, gas range and water heater,

Interior Display of Kitchen Goods in Gurney Oxford Store, Toronto.

the presence of the stand-up collar may, perhaps, be excused. As a catchy window for newly married couples the arrangement is a striking one.

The interior display could hardly be improved upon. The store is 20 x 120 feet in size, about 20 feet at the rear being devoted to an office elevated about three feet above the floor level. As will be seen in the illustration, a large quantity of stoves and ranges is stocked. the coal ranges being shown along the right wall behind the shelves on which the samples of cooking utensils are displayed. Towards the back hotel outfits, furnaces, side wall registers, etc., are shown. On the left side and in the centre are shown the large line of gas ranges made by the Gurney Foundry Co., as well as gasoline, oil and other stoves. Water heaters, refrigerators, etc., also occupy prominent places in the display.

The Gurney Oxford & Furnace Co. have two stores, the second one being at 287 College street, and both being under the management of Austin Eaton, who has been connected with the business since its inception. Mr. Eaton is a great believer in window display advertising, favoring special displays of a particular line to a general mixture of various classes of goods. The splendid use made of the floor space also indicates that he believes much in effective interior arrangement of goods.

FISHING TACKLE WINDOW DISPLAY.

A. N. Patriarche & Co., Battle Creek, Mich., recently put a fishing tackle display in their show window, which was the means of creating a good business at the time. The base of the window consisted of sod terraced to the top of tank, which contained running water with small perch, shiners and bass, together with small turtles. In the corner was a small oak tree and underneath was a lunch basket, tackle box and other items necessary to make a complete outfit. The background consisted of seines. In the foreground were fish lines, spinners, flies, fish hooks, while in the background to the left fish rods were suspended. A good photograph was made from a 15-minute exposure with electric light reflectors.

CANADIAN HARDWARE STORES
No. 6.

The accompanying four illustrations show different views of the new store completed a year and a half ago by the Lawrence Hardware Co., of Revelstoke, B.C., the store being 50 x 100 feet in size with electric tinsmith and plumbing departments at the back of the upstairs and four sets of offices comprising four rooms each in the front of the building on the second floor. The building has a full size stone basement, it being heated by hot water and lighted by electricity. The company employs two tinsmiths, three plumbers, one electrician, one driver and two store clerks, in addition to T. E. L. Taylor, the secretary-treasurer, and William Lawrence, manager and director. The company was formed in 1904, and the new building was occupied in February, 1905. They are sole selling agents in Revelstoke for Gurney-Tilden stoves and ranges, the Thomas Davidson Mfg. Co., enamel and tinware, the British American Paint Co.'s paints and Starrat's mechanics' tools. One of their recent contracts was for a complete water system for fire protection and domestic use and for the electric lighting plant for the Lundy Lumber Co.'s mills and buildings at Three Valleys, B.C.

The great width of the store is shown in the one engraving, the photographer having evidently endeavored to get a photograph of all the employes in preference to one showing the window displays, the large size of the windows allowing plenty of scope for a clerk enterprising enough to make a study of the art of window dressing. The illus-

CANADIAN HARDWARE STORES, No. 6—Lawrence Hardware Co.'s New Store at Revelstoke, B.C.

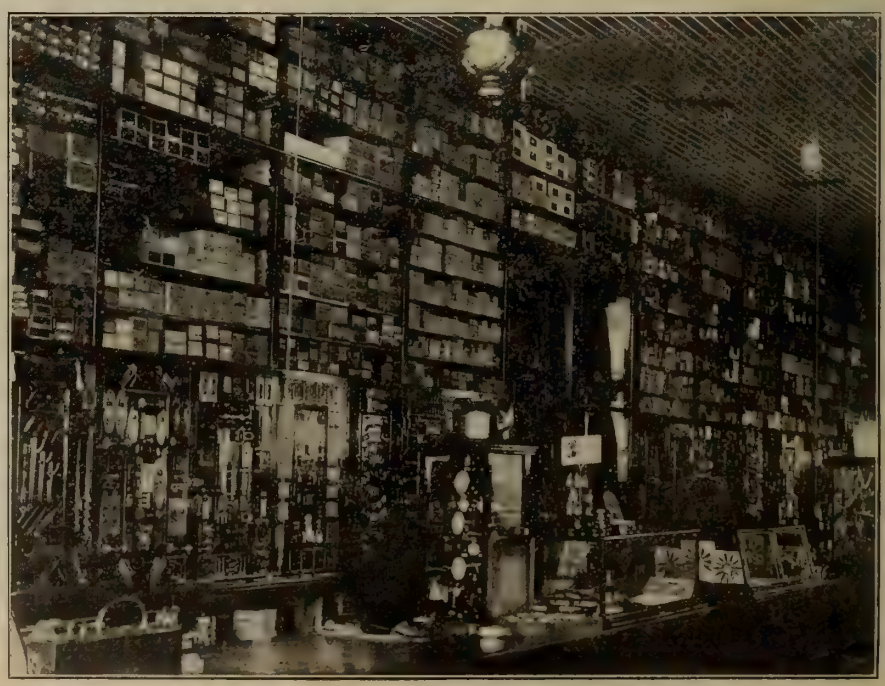
Lawrence Hardware Co.'s Display of Heating and Lighting Fixtures.

trations showing the interior of the store are well taken. The view showing the shelf hardware of a large stock

Cooking Ranges and Kitchen Utensils in Lawrence's Store.

is tastely arranged, although not to so good an advantage as it would be were a few dollars spent in hardware shelf boxes. The views showing the stove and tinware departments show a well arranged stock where little difficulty would be experienced in placing the hands on any articles desired.

The placing of the stoves and ranges is very systematic, and plenty of room is allowed for display. The large assortment of lighting fixtures and lamps, while necessarily taking up much ceiling space, makes a display which is bound to attract the eye of any customer desiring goods of this kind. The cabinet and silent salesman for the display of silverware and cutlery occupy prominent positions where much trade would be certain to be drawn to the department.



The Lawrence store on the whole is one which does credit to the west, where everything is done on a large and enterprising scale, and many lessons could undoubtedly be learned from the arrangements by many hardware dealers in the eastern portions of Canada.

WINDOW DISPLAYS AND THE MANUFACTURER.

When a manufacturer begins to make an article of merit and has the money to back it, the degree of success he attains by its sale depends upon his ability to create a desire in the public mind for the purchase of his product. Then the question occurs: How can he get the greatest possible publicity for a given expenditure? Most valuable of all, to be sure, is advertising in trade papers and other publications, but this article has to deal especially with window display advertising. Four points are to be considered in obtaining favorable and successful publicity. First, the publicity of the location of the display; second, the proximity to the market of the article advertised; third, strength and attractiveness of the display, and fourth the cost. The very fact, says the Sporting Goods Dealer, that retail dealers must be located on prominent thoroughfares, where people pass and congregate, proves that window display advertising guarantees publicity. After the desire to purchase has been created, by any form of advertising, the sooner the prospective buyer has the opportunity to purchase the article, the more likely he is to make the investment. When a man sees an attractive window display advertising an article that he needs or even takes a sudden fancy to, the chances are that he will step into the store and buy it.

Undoubtedly the window display is an ideal method of advertising anything sold in a retail store to the general public. The protection and space afforded by a window allows of an endless number of designs and ideas for attracting the attention of the public, from a ten-cent lithographic display to be pasted on the glass, to an electrical or moving figure, or a demonstrator who stands in the window and shows the public the advantages of the article advertised. An attractive and striking window display can be furnished by the manufacturer to the dealer for as little as ten cents per window.

The manufacturer who decides to distribute window displays of this kind will not only get big returns, but will also make a hit with his customers, for he likewise aids them in selling the goods. He should send a letter to the trade notifying them that he has secured a quantity of window displays and will take pleasure in sending one on request. In trimming a window there are two different sorts of people to whom the display must appeal. The passers-by who are within a few feet of the window and who can take in the detail of the display, compose one set. The other set is composed of those who see the window from a distance, from across the street or even a half block away. On the latter class the average window display has no effect because the dresser never tries to reach the great number of buyers who are on the other side of the street, but is satisfied if his exhibit looks well from within four or five feet. The upper half of the window, the only portion that can be seen by the men across the street is usually neglected, and it is almost as valuable as the lower part. Borders, lithographs and transparencies are some effective methods by which the manufacturer may help his trade's window display with a very small expenditure.

Display of Shelf Hardware in Lawrence's Store at Revelstoke

NECESSARY EXPENSES OF A SALESMAN

Fred Bradford Ellsworth, in The Iron Age

There are some firms whose knowledge of handling a salesman is so vague and lacking in good sound business judgment that it is beyond my comprehension how they can possibly be successful at all. The only plausible excuse to offer is that these people have unfortunately never had experience selling goods on the road and do not understand the life of a salesman.

For the benefit of such who are unable to bring within the range of their vision the necessary expenses of a salesman I shall attempt to enumerate them and also make suggestions that will be of benefit.

Railroad Fares.

The first item of expense is railroad fare. The majority of firms allow their salesmen full fare. If the salesman invests in mileage books, and many have half a dozen or more, necessitating an outlay of several hundred dollars of their own money, they reap the benefit of rebates. On the other hand, many firms emphasize the fact that mileage books are to be purchased and used whenever possible from an economical standpoint and all rebates returned to the company. In the course of a year these rebates amount to considerable money.

Where a salesman covers the entire country, or starts from the east and travels through to the Pacific coast, it is impossible to use mileage books economically. Round trip tickets can be procured, good for several months, for much less money.

Hotel Expenses.

Hotels throughout the country differ but slightly in rates, for almost every city of any importance has within the last few years built new hotels, and one is about as good as another.

Good, comfortable rooms in any modern up-to-date hotel cost from $2 per day up, and with bath from 50 cents to $1 extra, irrespective of sample rooms, which of course cost more, depending on size. With few exceptions, hotels are run on the European plan, and meals will average $1 apiece. Breakfast and luncheon may not always cost $1 each, but no dinner at night can be had for that price, and $3 per day for a man with a normal appetite is indeed economical living. Occasionally accommodations can be procured for less money than here cited. At the same time there are some cities where these figures are inadequate.

Entertaining Customers.

The treatment of customers is a question I have often heard discussed by employers and salesmen. The average salesman who is well known in his territory when he starts out in the morning generally fills his pockets with good cigars. Most everybody smokes nowadays and talking business while the fragrant aroma of a choice Havana permeates the atmosphere at times causes a feeling of good fellowship and often from a business standpoint has a beneficial effect.

The unredeeming part of it is shown more often than not by the new and inexperienced salesman, who gives away cigars indiscriminately, with the impression that it will help to ingratiate himself into the good graces of those with whom he comes in contact. Frequently it has a detrimental effect, and does not give a good impression at all.

It is customary for a salesman to invite a buyer to lunch with him occasionally, provided he knows him well enough, or to dine with him at night and spend the evening at the theatre, or in amusement that is congenial to his guest. A salesman should never do this because he anticipates an order, but because when he enjoys the patronage of a house he is, as a rule, on friendly terms with the buyer. This is a pleasant and courteous manner of showing his appreciation of their pleasant business relations.

Incidental Expenses.

Bus and baggage, laundry, pressing clothes, telegrams, postage, typewriting and car fare are other incidental expenses. They are apparently of minor importance, still they amount to considerable money in a short time and are all necessities to a salesman.

The next item of expense, and an increasing one, is that of tipping. This practice originated in Europe, became the vogue in this country, and then practically an unwritten law. It is now carried to such an extent that it is a disgrace to those who allow it. Railroads, hotels and cafes expect patrons to pay their employes' wages. For a salesman above all others to ignore this practice would result in his being subjected to such annoyance, discomfort, insult and humiliation that he simply could not endure it.

Compelling a salesman to keep an itemized expense account is a question that has been discussed over hundreds of times by employers and salesmen. Its advisability or inadvisability is, I think, a matter of opinion. There are many firms who do not believe in asking their men to render an itemized account. They are furnished so much money when they start on a trip and the difference between that and what they return is their expense. Any man who pretends to know anything about business should know pretty nearly what it costs to travel on the road. The majority have had that experience. If they have not and employ salesmen, it would be an economy in the end to hire an experienced manager.

Too Much Red Tape.

I know of a firm recently who lost one of the best salesmen in the country, all on account of an expense book and red tape. The man was a high priced salesman whose services they had solicited. He agreed to cover a certain territory, and if to his liking was to sign a three-year contract. When he was ready to start the cashier handed him an expense book, with every conceivable item of expense enumerated, with instructions that at the end of each week upon receipt of his book a check for the next week's expenses would be forthcoming. Then they handed him a form sheet upon which he was to give the name of each person called on daily, and if he did not sell why not, and a lot of other unnecessary red tape.

The salesman was nonplussed and at the same time insulted, and going to the head of the house said: "Gentlemen, you hired me to sell goods. That is my profession and I have been doing it successfully for ten years. I am not a bookkeeper or accountant, or I should have applied for that position. If you have no confidence in my integrity why did you seek my services? I shall be pleased to look after your interests to the best of my ability, communicating such information as is of importance, but as for rendering an itemized expense account and a report such as your cashier insists upon I shall never do it." The firm was obdurate, and the next day the man signed a contract with another concern at $5,000 a year, with the privilege of extending the contract to five years and an increase of salary.

Expense Account Advisable.

Personally speaking, I am in favor of a salesman keeping an expense account, and I think from a business standpoint it is for the best interests of a firm. I do not say this to cast any reflection on the honesty of a salesman. Most of them are honest and reliable. There may be some who are honest perhaps through caution and perhaps because well paid. Occasionally there are salesmen whose eyesight is so poor that they are unable to discriminate between their own money and that of the firm's. This class is invariably poorly paid and have to make both ends meet some way or other.

An expense book is a good reference for a firm to have. It shows just what the cost is of covering different territories. It is also handy in making out a route list and shows pretty nearly the time taken to cover it. It also shows the money spent on the trade, which at times according to conditions it may be expedient to increase or economize, all depending on the nature of the business.

NOVEL CONSTRUCTION.

E. C. Cole, Chicago, has secured a patent for an improvement on cooking stoves which relates particularly to the construction of the upright grate-front and of the broiler for co-operation therewith. Mr. Cole finds in practice by constructing the grate-front with the openings or spaces between the grate-bars narrowed or contracted at the upper portion of the grate the boiler may be set upright, and uniform results secured.

Seeing The Other Side of Things

By S. D. Cox, in Chicago Tribune

Brown is extremely young looking for his age and position, else this could never have occurred. Brown never filled out any as he grew older, never got any grey hairs, and never allowed any lines of age and responsibility to creep into his face. He is the manager of a wholesale hardware house that bears his name and he doesn't look much older now than he did when he came home from college, twenty years ago, and his father put him in the direct line for promotion to the chair of manager. He is a little more rotund as to visage, a little less inclined to be long and lanky, but even now he would have no trouble in passing for a man of 25 or thereabouts. In fact, he did pass for a man of 25 once, for a whole week, and in one of his own branch houses at that, and thereby hangs the story.

It came through Brown having tried the many conventional ways of spending a vacation and growing tired of them. He had been to the mountains, to Atlantic City, to Europe, to the nearby lakes, and the far west. He had spent something like a score of vacations in the conventional way, and he had grown tired of them all. As usual he listened to the talk at the clubs concerning places where the fishing was good or the women beautiful, read and reread pamphlets that told of "Where to spend your vacation" by the dozens, and cast them all aside with a jaded air. He thought of the seashore, the mountains, and the lakes. Everybody was going there. It would be the same old routine of pleasure pursuit over again, the same thing happening, the same painful return to work when the vacation was ended. Brown sighed and wished that some genius would invent a new and entertaining way of spending a vacation. He placed his feet on his desk and looked lazily out of the open window. Brown's place of business is on the waterfront, and across the river Brown, as he sat, saw the big warehouse where the big shipments of his house were made up. A crowd of truckers were enjoying their noon rest in the shadow of the building, smoking, laughing, and joking. Brown wondered if any one of them was troubled as to where he should spend his vacation. Then the idea came to Brown.

Thinks Labor a Novelty.

The idea was so good and new that he chuckled at the thought of it. The lakes, and mountains, and seashore might be monotonous, but surely it would be a novelty and a change, at least, to spend a week as a laborer in the shipping warehouse across the river. Yes, it would be more than a novelty. It would be a pleasure, something to look back on for half a lifetime. He would dress himself in rough clothes, secure work as a trucker or packer, and see how his business looked from the standpoint of the man down at the bottom of the ladder. As he revolved the idea over in his mind Brown wondered why other business men had never thought of doing this to get an outside view of their business. Then he remembered his youthful appearance and chuckled. Most managers would be unable to palm themselves off as a young, able bodied workman.

The next Monday morning a sleepy and angry Brown was bolting a breakfast at 6.15. Seven o'clock was Brown's usual time for arising. At 8 he usually sat down to his breakfast. When he made his resolve to spend a week in the warehouse he had given but little thought to the early rising problem. But now it loomed up before him in a way to overwhelm all other ideas. However, Brown was game. He swallowed his breakfast by 6.30, and raced for a car. Of course he couldn't come to work in a carriage, not when he was on the pay rolls as a trucker at $9 a week. Then Brown for the first time really discovered how tight a Chicago street car can be packed on a morning's trip. He had read about these things; now he knew that what he had read was all true, and he sweated and prayed that the ride would end.

Called Down for Being Late.

Because of a delay caused by a broken wagon wheel Brown was five minutes late to work. He rang up his time, put his key on its hook, and was about to go on his way into the warehouse, but a rude, coarse person with a heavy voice stopped him.

"Bad way to start on a job, young feller," said the person, stepping directly in front of Brown. "When you work for Brown & Co. you've got to be on time, on the minute, or your pay don't go on, see? This is your first offence, because it's your first morning, and it'll only cost you 25 cents, but you've got to be more careful in the future, or get out of here."

"But I was delayed by a wagon breaking down," said Brown, angrily. "I couldn't help it. I started early enough. You can't fine a man for something that is not his fault."

The rude, coarse person spit and held up a warning finger.

"Aw, that'll be all of that," he said. "What d' you spose we care about how you didn't get here on time. Get in before 7 o'clock, that's all, and don't bother us about how you do it. You get $8.75 in your envelope next Saturday, if you hold your job that long. Now, get your truck there and get busy with those bales. Step lively, now, and don't lose any time!"

This "Good" Foreman.

Brown swallowed hard, but the rude, coarse person had a way with him that compelled obedience. He was a floor foreman whom Brown had never seen. He had heard of him, however. One of his superintendents said that he was a "good man." Brown remembered this as he grasped the rough handles of a four-wheeled truck and shoved it along the floor.

"Those bales over there?" faltered Brown, appalled at the pile that rose before him.

"Those are them," said the foreman. "When you get those down let me know and I'll have another job ready for you."

"Who's going to help me get them down?"

"What? Help you get them down? You help yourself, see? Just dig in there and help yourself. And get busy right away, too."

Brown was then left alone. He viewed the big bales in dismay. It hardly seemed possible that human strength could be expected to take them down and put them on the truck. Yet he saw presently that men were doing it in other parts of the building. It was evidently in the day's work. He started at once to imitate the others. Like them he clambered to the top of the pile, carefully loosened one of the bales from its place, and what he expected to do was to ease it down to his truck after the manner of the other men. But there was something wrong. The bale refused to act decently. It slipped suddenly, slued over the edge of the pile and hung suspended for an instant. Brown grabbed valiantly at it. Then the bale fell off of the pile onto the floor, and Brown went with it. A red-headed sweeper laughed near by. Brown turned fiercely upon him. He intended to discharge the man on the spot. Then he remembered he was only a trucker and subsided. He humbly asked the sweeper to help him put the bale on the truck.

Work Takes Strength.

"Guess you ain't used to this work, are you?" said the sweeper, as he threw the bale up alone. Brown looked at him and wondered. Brown was a golf player, a swimmer, a club athlete. Yet he could never have lifted that bale alone, not to win the finest prize cup that was ever made. He attacked the next bale carefully and succeeded in finally landing it safe on the truck. Two bales made a big truck load to Brown's eyes. He started for the loading platform. The rude foreman was upon him out of nowhere before he had moved a yard.

"Here, where are you going with that empty truck?" he inquired. "Eight bales, that's what you put on here, young feller. What you trying to do, play horse with me? Take that truck right back and put on six more bales. And hurry up, too; we can't have them wagons waiting all day."

All through that first day Brown loaded and wheeled his truck and unloaded it at the platform. At noon he wanted much to die. There was a stiffness in his back that was unendurable, almost, and his legs and arms ached as they never had before. He laid himself down with the rest of the men when lunch time came. A half hour's rest, he decided, would fit him for the afternoon's work. But when he arose at the end of the half hour he had stiffened. It hurt him to move now. He honestly did not

see how he could lift another bale that day. But he did it, somehow. The spirit that had made him a good business man pulled him through. But that night when he went home his back was bent and his legs were shambling, and he never troubled about straightening up, not even when he was safe and secure in his own home and in his proper apparel.

Not Paid for Overtime.

The second day was a repetition of the first. By 6 o'clock the pile of bales was gone. Joyfully Brown dropped his truck and made for the washroom. Again the foreman yelled "Here" at him.

"It's 6 o'clock, isn't it?" asked Brown, defiantly.

"Never mind about that," said the foreman, decisively. "You just stick here and sweep up the dirt that your pile left and put it in those garbage cans."

"Do I get overtime for that?" asked Brown, curiously.

"Take you about an hour," was the reply. "No overtime for anything less than two hours." Brown instantly remembered that he himself had promulgated such an order six months before. Silently he took a broom and began to sweep. The dust and dirt rose into a cloud about him and choked him. He was hungry and tired. The combination was not good. When he was through he felt more like crawling than walking. But he noticed that the other men had done the same thing, and regarded it as nothing extraordinary. That night he was too tired to eat, but his sleep was a thing of complete oblivion.

The third day was easier than the others. That is, the work was not so heavy, in actual weight. Brown stood in a line of men who passed tar paper to each other. The bundles only weighed thirty pounds. Thirty pounds in a solid, compact bundle is not much, for one lift. Thirty pounds multiplied by several hundred times grows to a weight that oppresses every muscle and bone in the untried body and makes a man want to sink down under each bundle. Brown sagged with each bundle that he took and passed on, but somehow he managed to last through the day. The fourth day he had the opportunity of earning some extra money. He worked until 10 o'clock that night and earned 50 cents by it. The next morning he did not get up. The servant called him as usual and used all his persuasive powers to force him to rise. Brown lay still and cursed him away. He was willing to lose a day's pay for the pleasure of getting rested.

Fired by This Foreman.

Next morning he made for the time office bright and early. It was his last day as a trucker, and he went to work with a light heart. The foreman stopped him before he reached the time clock.

"You needn't bother about ringing up this morning," he said. "You ain't on the pay roll any more."

"Why not?"

"Why not? Because you're fired, that's all. Fellow don't need to take and throw you out, does he? You didn't make good, that's all, and you may's well take your time and go now. You get a full week's pay, anyhow. That's one of the firm's rules."

"Tell me why I'm fired," begged Brown.

"Well, I noticed how you've been shirking ever since you came, and particularly day before yesterday," was the surprising reply. "Trying to soldier all the time. Then yesterday you laid off looking for another job. That's enough for me. Here's your time."

Brown was too dazed to reply. The foreman had a way with him.

"Well, how did you enjoy your vacation, Brown?" said his friends, later.

"I didn't enjoy it," said Brown. And the friends noted that he was stiff and lame, and wondered. Soon afterwards there were instituted some reforms in the warehouse. The foreman was surprised by getting a raise. Brown agrees with the superintendent that the foreman is a "good man."

STOVES AND THEIR OPERATION

Reprinted from Catalogue Issued by the Excelsior Stove Co., Quincy, Ill.

Stoves do not have a draft, therefore do not expect them to draw; as well expect a buggy to run without the agency of a horse or other force to draw it. The chimney produces the draft, and the character of draft will be in relation to the character of chimney—good in a chimney which is built to promote draft, and bad or sluggish in a chimney which has obstructions.

A thorough understanding of the phenomena of draft will indicate the requirements of a chimney, make self-evident the existing evils, and point out the remedy in any chimney which lacks the required amount of draft for the successful operation of any stove attached.

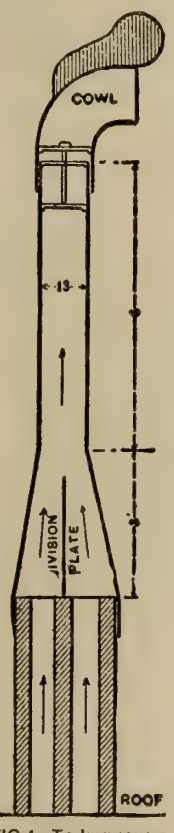


FIG. 1—To Improve a Weak Chimney.

FIG. 2—Branch Chimney Cowl.

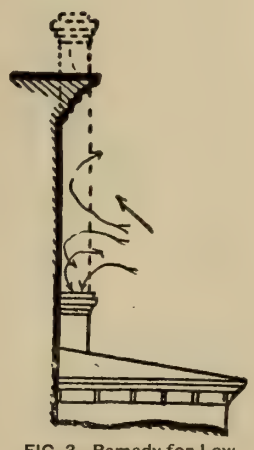

FIG. 3—Remedy for Low Chimney.

Draft is caused by the unequal temperature of air. Rarefied air travels in a spiral column and rises into space, displacing cold air in its passage. If rarefied air is confined to a narrow passage, as in a chimney, it causes draft which in strength will be in proportion to the length of the spiral column. These spirals of rarefied air begin at the entrance of the stove pipe into the chimney, and continue in a column to the top outlet. At their formation the beginning is slow and continues in velocity until they reach the open air; therefore, if the column is of great length, the movement is quick, and is termed strong draft.

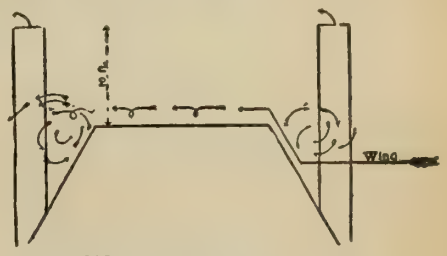

FIG. 4—Perfect Chimney Height.

It is obvious, therefore, that a chimney must be constructed to favorably accommodate a spiral movement of rarefied air. A circular perpendicular shaft is the very best, because it has the exact form of the spiral column. A square form is next best; it, however, offers some obstructions, due to the four corners which hold a neutral air. An elongated space is a direct opposite to the spiral current, and, therefore, is a great fault in a chimney. Curves or contractions are severe fault, since they tend to disrupt the even flow of the spiral column. Short chimneys offer an impediment, since the spiral column is broken after it has had a chance to form only a few turns, and is correspondingly weak.

Length and Indication of Draft.

Other things being equal, length is an indication of draft. Factories and mills would not go to the expense of high smoke stacks if it were not necessary to get sufficient draft and reach above surrounding obstructions to a free flow of air over the tops of chimneys. If the stove pipe does not enter the bottom of a chimney, make it the bottom by filling the chimney below the pipe entrance; this can be done with a piece of sheet iron and cementing in place. This is necessary since the spiral column of rarefied air requires an unobstructed beginning, as well as termination.

If a chimney requires additional length continue it with brick of the same size,

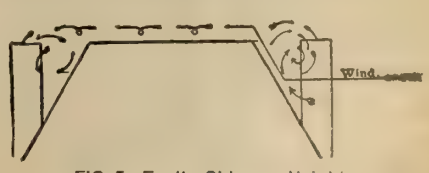

FIG. 5—Faulty Chimney Height.

as shown in cut (figure 3). If sheet iron extension, be sure it has the same area of all the flues in the chimney, and put in flue partitions, as shown in cut (figure 1).

Where chimneys cannot be extended above surrounding buildings or other obstructions, use a revolving cowl, as in figure 1, or a branch stationary cowl, as in figure 2. A faulty chimney connection is shown in figure 6, since the connection

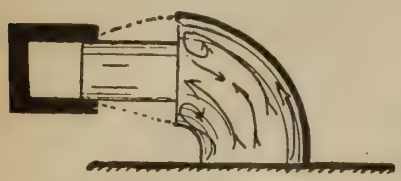

FIG. 6—Faulty Chimney Connection.

is a reduction of the size pipe. It is equally faulty to reduce the size of pipe less than the pipe collar on the stove; stoves having 7-inch outlet collars have also 7-inch flue system throughout, and must have a 7-inch pipe to serve it.

New stoves will not bake on the bottom because they are new and too clean. A few days' use will put an ash deposit on the main bottom under the oven, and retain the heat to the bottom oven plate, after which it will bake. In all cases where a stove is complained of, and actually fails to operate satisfactorily, the fault in either case of cooking or baking can be traced to the draft, which, as indicated above, may rise from many causes.

Condensation in Stove Pipes.

Its manifestation is a black, tarry water leaking out of the stove pipe joints; this is caused by the moisture in the fuel. Wood, soft coal or hard coal contain a percentage of moisture, no matter how dry apparently; the degree of moisture is in the order in which they are named. When wood is slowly heated, this moisture is given off in the form of vapor, and when the draft is made sluggish by closing the stove dampers, this vapor condenses in the pipe, and, becoming mixed with the soot the whole is called creosote.

When a brisk fire is kept up in the stove the creosote is not noticeable, as the rapid draft carries out the vapor before it has had time to condense and run out of the pipe. The remedy is to keep up a circulation; this can be done by an air opening in the pipe near its beginning, and acts as a check to the fire.

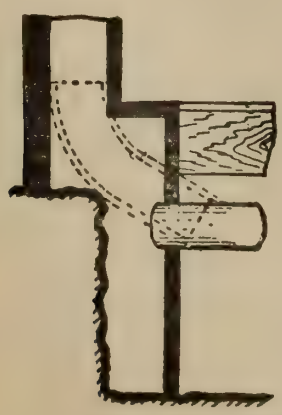

FIG. 7—Improvement of Bad Conditions.

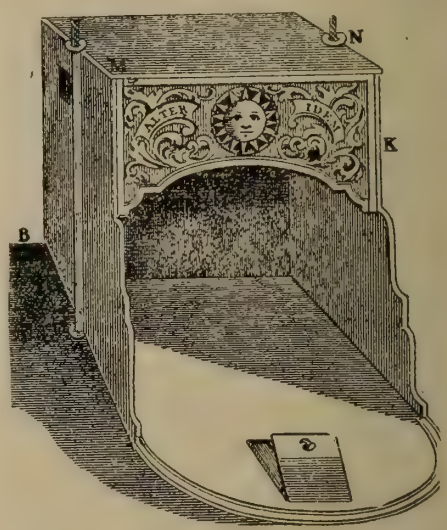
Stove dealers who will devote a little time to studying draft and its causes will save themselves much annoyance, and never find a stove that they cannot make operate satisfactorily to their customers.

BENJAMIN FRANKLIN'S FAMOUS STOVE

Remarkable Career of America's First Inventor

Recently the two hundredth anniversary of Franklin's birth has been celebrated in Philadelphia, the city to which he came as a run-away boy of seventeen, looking for work as a printer. This versatile man combined with endearing qualities of heart an astonishing variety of talent. He won distinction as editor, printer, inventer, diplomatist, politician, legislator, soldier, philanthropist, scientists, humorist, philosopher, and, in fact, in almost every line of human endeavor except the one to which his father first intended to devote him—the church. In all these fields his practical common sense illuminated everything he touched. And it was this practical common sense which brought to him a large measure of his fame, for "You know the just esteem," wrote Jefferson, "which attaches itself to Franklin's science, because he always endeavored to direct it to something useful in private life." And Franklin himself asked, "What signifies philosophy that does not apply to some use?" His effort to improve whatever he took in hand, and his predominating sense of utility, found their roots in his training as a mechanic. He had that admiration for skill which the competent artisan always has, for he said: "It has ever been a pleasure to see good workmen handle their tools."



That his mechanical training played an important part in his scientific investigations he himself asserts. "And it has been very useful to me having learnt to be able to do little jobs myself in my house when a workman could not readily be got, and to construct little machines for my experiments, while the intention of making the experiment was fresh and warm in my mind." His scientific writings continually describe "little machines that I have made for myself." His experiments would never have been made had it not been for this very ability to construct apparatus, for in his day scientific apparatus could not be purchased. His scientific observations were of the rough-and-ready sort that might properly be comparable to the observations made by a Stanley traversing for the first time a dark continent. To-day, probably scientific knowledge is too highly specialized and too vast for a many-sided man like Franklin to leave a deep impress.

Franklin came of a working family. "My elder brothers," he states, "were all put apprentices to different trades." Taken from school at ten "to assist my father in his business, which was that of a tallow chandler and soap-boiler, I was employed in cutting wicks for candles, filling the dipping mold and the molds for cast candles, attending the shop, going of errands, etc." At twelve he was apprenticed to his brother as a printer, with whom he staid about five years, learning the trade.

After Franklin's return to Philadelphia from London, whither he had gone to buy equipment for a shop which Governor Keith had deceived him into believing that he would finance for him, he again went to work in a printer's shop. "Our printing-house," he writes in his autobiography, "often wanted sorts, and there was no letter founder in America. I had seen types cast at James's in London, but without much attention to the manner; I now contrived a mold, made use of the letters we had as puncheons, struck the matrices in lead, and thus supplied in a pretty tolerable way all deficiencies. I also engraved several things on occasion; I made the ink; I was warehouse man, and everything, and, in short, quite a factotum."

After he had gone into business for himself and had commenced the publication of a newspaper, he engraved a crude type-metal map of the siege of Louisburg, which is said to be the first attempt of a newspaper to illustrate a news article. In order to print some paper money satisfactorily, he contrived a copper-plate press for it, the first that had been seen in the country. He also cut several ornaments and checks for the bills.

Traveling electricians went about all over Europe, exhibiting the phenomena and selling shocks to a half frightened

The Franklin Stove.

and deeply interested public. One of these itinerants, who had come to this country, started the master printer making electrical experiments. He repeated the experiments he had seen and devised new ones. Crowds flocked to his house to see the wonders.

Other investigators had suggested the probable identity of electricity and lightning. Franklin, however, was not content with theory or mere speculation, but tried to prove the fact. This led to his famous kite experiment, by which he clearly showed that lightning was an electrical phenomenon. This experiment added much to Franklin's reputation. The idea of a man flying a kite in a thunder storm was sufficiently absurd to appeal to the popular imagination. The practical Franklin immediately made use of his knowledge by devising something that would be useful—the lightning rod. The introduction of this means of protecting buildings from lightning was attended with considerable opposition. One minister raged at the innovation as being an attempt to thwart the divine will, for thunder and lightning were commonly regarded as the physical expres-

sion of God's wrath against the insects He had created. The success of Franklin's electrical experiments had much to do with his usefulness to the colonies when he went later to Europe as their representative, for through these experiments his name had become well known in Europe and his correspondence with many famous people had brought him many valuable acquaintances.

Next to the lightning rod, probably Franklin's best known invention was the Pennsylvania fireplace. To encourage the use of this stove Franklin prepared a pamphlet describing its construction and dilating upon its advantages. This advertising circular, which by-the-way would reflect credit upon the modern ad writer, states as one of the reasons why his stove should be preferred to anything heretofore put on the market that: "If you sit near the fire you have not that cold draught of uncomfortable air nipping your back and heels, as when before common fires, by which many catch cold, being scorched before, and, as it were, froze behind."

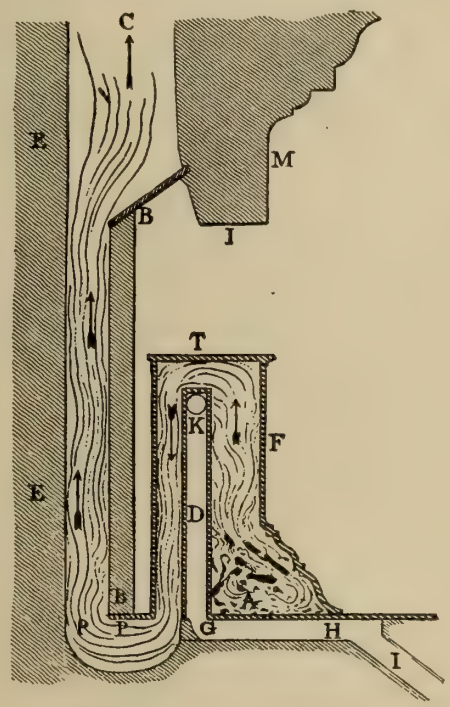
His description of the Pennsylvania fireplace is as follows:

1. A false back of 4-inch (or, in shallow small chimneys 2-inch) brick work is to be made in the chimney, four inches or more from the true back; from the top of this false back a closing is to be made over to the breast of the chimney, that no air may pass into the chimney but what goes under the false back and up behind it.

2. Some bricks of the hearth are to be taken up, to form a hollow under the bottom plate, across which runs a thin, tight partition, to keep apart the air entering the hollow and the smoke; and is therefore placed between the air hole and smoke holes.

3. A passage is made, communicating with the outward air, to introduce that air into the forepart of the hollow under the bottom plate, whence it may rise through the air hole into the air box.

4. A passage is made from the back part of the hollow, communicating with the flue behind the false back; through this passage the smoke is to pass.



The fireplace is to be erected upon these hollows, by putting all the plates in their places, and screwing them together:

(M) The mantelpiece, or breast of the chimney.
(C) The funnel.
(B) The false back and closing.
(E) True back of the chimney.
(T) Top of the fireplace.
(F) The front of it.
(A) The place where the fire is made.
(D) The air box.
(K) The hole in the side plate, through which the warmed air is discharged out of the air box into the room.
(H) The hollow filled with fresh air, entering at the passage I, and ascending into the air box through the air hole in the bottom plate near.
(G) The partition in the hollow to keep the air and smoke apart.
(P) The passage under the false back and part of the hearth for the smoke.

The arrows show the course of the smoke.

The fire being made at (A), the flame and smoke will ascend and strike the top (T), which will thereby receive considerable heat. The smoke, finding no passage upward, turns over the air box and descends between it and the back plate to the holes in the bottom plate, heating as it passes both plates of the air box and the said back plate; the front plate, bottom and side plates are also heated the same time. The smoke proceeds in the passage that leads it under and behind the false back and so rises into the chimney. The air of the room, warmed behind the back plate, and by the side, front and top plates, becoming specifically lighter than the other air in the room, is obliged to rise; but the closure over the fireplace hindering it from going up the chimney it is forced out into the room, rises by the mantel-piece to the ceiling, and spreads all over the top of the room, whence being crowded down gradually by the stream of newly warmed air that follows and rises above it, the whole room becomes in a short time equally warm.

At the same time, the air warmed under the bottom plate, and in the air

Sectional View of the Franklin Stove.

box, rises and comes out of the holes in the side plates very swiftly, if the door of the room be shut, and joins its current with the stream before mentioned, rising from the side, back and top plates.

The air that enters the room through the air box is fresh though warm; and computing the swiftness of its motion with the areas of the holes, it is found that near by ten barrels of fresh air are hourly introduced by the air box; and by this means the air is continually changed, and kept, at the same time, sweet and warm.

Franklin was offered a patent on his stove by the governor, but refused it, saying, "That, as we enjoy great advantages from the inventions of others, we should be glad of an opportunity to serve others by any invention of ours, and this we should do freely and generously."

Before Argand invented his lamp Franklin had conceived the idea of a burner, which should supply a column of air in the centre. He made for his own use double spectacles with lenses curved for near and far sight. One of his inventions for which the public owes him dubious praise is that of a mangle for pressing instead of ironing clothes.

Franklin, on the basis of some experiments he had made, suggested the use of oil as a means of calming the sea during a storm. He studied and wrote upon sun-spots, shooting stars, light, heat, fire, air, evaporation, tides, rainfall, geology, wind, whirlwinds, waterspouts, ventilation, sound, etc. He followed closely the mechanical developments of the day, such as the balloon, and the improvements in the methods of manufacturing air-pumps, guns, wheels, clocks, etc.

During the 84 years of his busy life he was constantly on the alert to learn and to apply his knowledge to the benefit of the public. An incident reveals his faith in progress through experiment and also serves to illustrate his humor and the crispness of his repartee.

When someone spoke rather contemptuously in Franklin's presence of Montgolfier's balloon experiments, and asked of what use they were, he retorted, "Of what use is a new-born babe?"

DEMONSTRATIONS AT FAIRS.

A new idea in selling a range was tried by a man who advertised that at the country fair he would bake a bag of flour into bread. When the demonstration came off he had a circle of farmers' wives around him watching the progress of the baking and asking questions as to price and construction of the range. The first day of the fair he sold the range to three different people, stating he would have to take it back to the store and clean it up before delivery. This way of showing off a range may not be possible for every merchant, but it is certainly a practical manner to demonstrate the good points; and to have an occasional baking in one's store seems to be about as good a way as any to bring goods before the public.. Many buyers have some trouble with a range when first purchased and before its ways are learned—for a range has ways peculiar to itself—but when once familiarized with all the dampers and drafts, it is astonishing how much a person can do with it. This is just what the store salesman must acquaint himself with before he commences his "bake." A good fire and a well heated oven are also essentials that must not be overlooked if the demonstration is to be a success. It is by such means as these that one gets his business and his goods advertised. There is nothing freakish about such a method; it is quite sensible and up to date, and the man who is to the front in giving actual tests of what his range can do will find that he is getting a lot of good and substantial advertising, and making good sales.

TINNING SOLDERING IRONS.

To tin soldering irons heat well and dip in pulverized sal ammoniac a moment and then rub with solder. This operation will be effective no matter how dirty the iron is or how many pit holes it contains.

TIN SHOP PATTERNS

SMOKE PIPE COLLARS.

The smoke pipe collar on a steam or water heater often comes near the basement ceiling, making special patterns for piping necessary, writes C F. Troeller in the American Artizan. Fig. 1 shows an elbow which was made with the section marked "A 9" in diameter

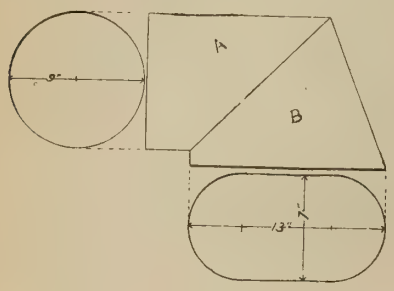


FIG. 1.

and cut to fit the seam of a two-piece elbow of that size. Section marked (B) was patterned to fit the elbow ellipse at one end and the heater collar of the form shown at the other end enlarged to the circumference of a ten-inch pipe. The pipe as shown, leads to the side but can be patterned to fit in any direction.

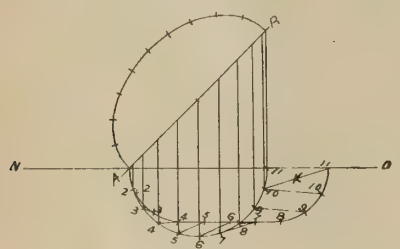

FIG. 2.

To make this pattern proceed as follows: Draw the horizintal line as shown in Fig. 2 and below it draw a half circle, the size of pipe. In corresponding position draw the half oval, or shape of heater collar, just as it should come when elbow is in position. Mark each of

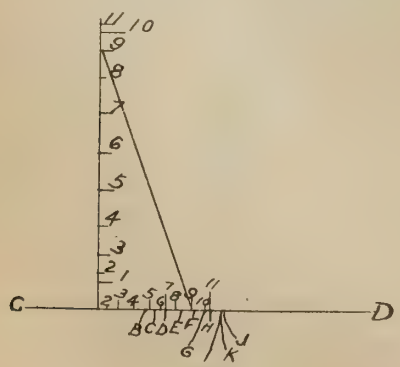

FIG. 3.

these into an equal number of spaces—in this case from one to eleven.

Next draw the line A-B, and draw vertical lines from the spaces on half circle to where they intersect this line. Also draw lines between the same numbers on the two shapes below. Draw part of the ellipse as shown on line A-B and divide into the same number of spaces as the half circle. This is done only to show the true length of line of the spaces marked off on the half circle. Now mark the length of the vertical lines in Fig. 2 above N-O on the vertical line in Fig. 3, allowing as much between No. 1 and the horizontal line of Fig. 3 as this part of the elbow is to extend down. Mark off on line C-D, the lines drawn between like numbers in Fig. 2. Draw lines from numbers on half circle, Fig. 2, to the next higher numbers on the oval and mark the length of these on C-D, Fig. 3, shown

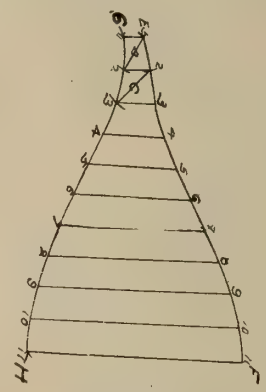

FIG. 4.

by letters. The line marked (K) in Fig. 2 is an example.

The length of lines shown vertically in half plan, Fig. 4, is the same as lines drawn to same numbers in Fig. 3, as from 9 to 9. The length of line E-F in Fig. 4 is the same length as that around the elipse in Fig. 2 and spaced just the same. The line G-H of the plan is likewise the same as that around the half oval shape for base of elbow and spaced as in Fig. 2. To build up the plan we start by drawing the line 1-1, then set the divider the length measured from 1 on the vertical line to (B) in Fig. 3. Then strike off the arc as shown by the line marked (B) in plan. Strike another arc from (G) the length of radius of one space and the same from (E). Draw 2-2 from intersection of first two arcs to 2 on E-F. repeat similar triangulation for each section until complete.

PATTERN OF A T-JOINT.

To man an intersection of a 5 or 6 inch pipe at right angles, writes a western tinsmith. first lay off a plan as shown in the accompanying Fig. 1. At point of intersection lay off as indicated into any number of spaces. Then divide stretchout, Fig. 2, into two equal parts and space off to correspond with plan, Fig. 1. The work is the same as laying off elbows from this point on. Fig. 3 is the blank for the larger pipe; take length of line from (A) to (B), Fig. 1, add to this length of line 3, this will give the length of hole to be cut in Fig. 3, the diameter of smaller pipe is the width of hole. Lay off length and

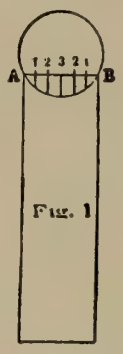

Fig. 1

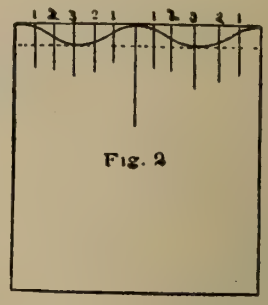

Fig. 2

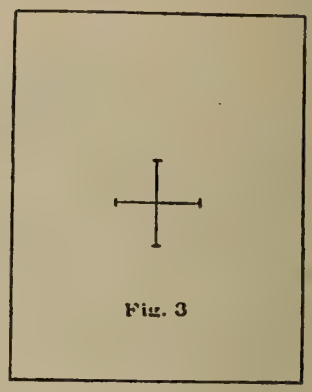

Fig. 3

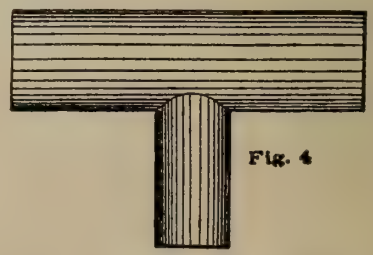
breadth as indicated on Fig. 3 and describe an ellipsis. This will be all that is necessary to cut patterns for a T-joint.

BALL FOR A WEATHERVANE.

It has been stated that each solid of approximate development must be referred to one of the three classes of solids capable of accurate development, writes Harry M. Seely. It is first necessary, therefore, to determine which of the regular solids the irregular solid to be developed most resembles. The blanks, or patterns, produced by these methods are, as has been observed, flat,



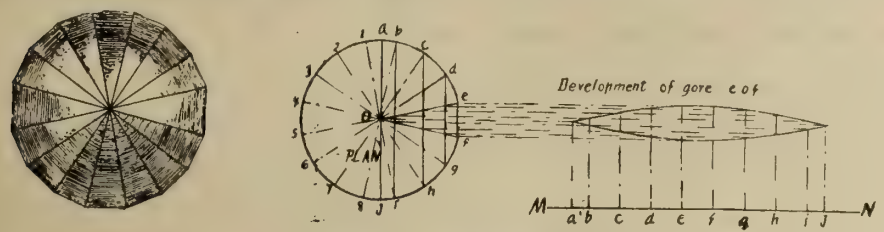


Fig. 4

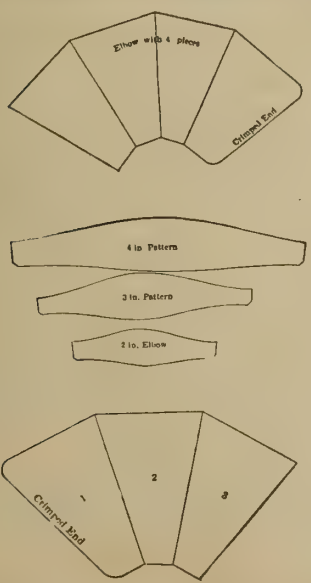
or plane, surfaces; and, since it is necessary to "raise" these surfaces by hammering, the draftsman must imagine the surface desired in the final form. The principle by which these solids are classified is illustrated in Fig. 1 by the perspective of the sphere and its re-

solved gores. After the sphere has thus been resolved into gores their development may be produced in the regular way, each gore being separately treated in the manner shown. This is called development by gores, and may be applied to a number of irregular solids resembling the sphere.



Ball for a Weathervane.

Fig. 2 shows the plan and the development of gore (eof). Divide the plan of the sphere into any convenient number of parts as shown in Fig. 2. Next draw line (MN) and on line (MN) mark off the distances a, b, c, d, etc., which are the distances taken from the plan to determine the stretchout of one-half the circumference of the ball. Draw vertical lines at the different points on line (MN) extending them upward indefinitely. Referring to the plan of Fig. 2 connect (bf), (ch), (dg), etc., and where these lines cross the gore (eof) and at their points of intersection draw horizontal projectors to connect with the vertical lines drawn from (MN) which is very clearly shown in Fig. 2. A line traced through the points of intersection and allowing a lap on one side will complete the pattern; the other gores being all alike one pattern suffices for all.

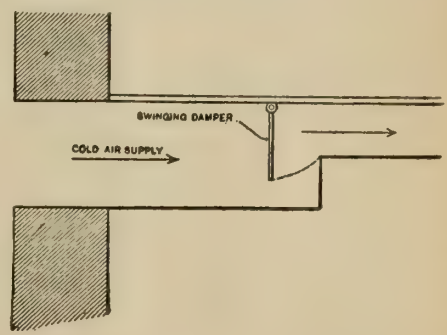
PATTERNS FOR ROUND CONDUCTOR ELBOWS.

The accompanying patterns for round conductor elbows from the American Artizan are simple and can be

easily made of scrap tin. The two and three-inch are lapped and soldered; the four-inch is grooved. Make a cylinder of sheet iron flaring to solder the pieces over the size of your conductor. Three pieces make an elbow, so one can make any desirable angle needed, and if a square elbow is required use four pieces; the first of small end crimp, and with the small burning machine x-crease the large end, leaving a space on each side of the lap seam, say three-fourths of an inch; then put in second piece and crease the same as before, pressing the rings together so as to bring the ring in the crease, and tacking the curved side to hold it in place to be soldered.

THE FIRST STOVE.

The most important uses of fire were taught by fire itself. As primitive man stood near the flames of the burning tree and felt their pleasant glow he learned that fire may add to bodily comfort; and when the flames swept through a forest and overtook a deer and baked it, he learned that fire might be used to improve the quality of his food. The hint was not lost. He took a burning torch to his cave or hut and kindled him a fire on his floor or earth. His dwelling filled with smoke, but he could endure the discomfort for the sake of the fire's warmth, and for the sake of the toothsomeness of the cooked meats. After a time a hole was made in the roof of the hut, and through this hole the smoke passed out. Here was the first stove. The primitive stove was the entire house; the floor was the fireplace, and the hole in the roof was the chimney. The word "stove" originally meant a "heated room." So that if we should say that at first people lived in their stoves we would say that which is literally true.—St. Nicholas.

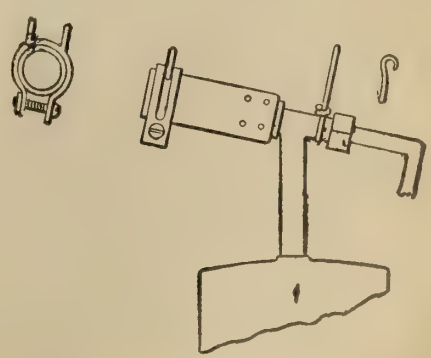


IMPORTANCE OF DRAFTS.

To be able to handle the complaints that come in on account of a range not baking well—and their name is legion—a dealer should thoroughly understand the action of drafts and the local conditions surrounding the range in question. When a woman calls at the store complaining of a batch of biscuits that did not bake properly, or a baking of bread that went wrong, it is not much satisfaction for her to be told that hundreds of that class of cooker have been sold and that they have always worked well. It's up to the dealer if he values his trade to see why the range did not work.

There are many reasons why, but perhaps the prevalent one is the lack of proper draft to evenly distribute and circulate the heat. It takes eighty-five cubic feet of air to burn one pound of soft coal perfectly, and when one thinks of this, he begins to realize how important is draft. Too much draft will cause the bottom of the oven to get over-hot, and let the heat go up the chimney. Too little draft will not create perfect combustion, and instead of making heat, it makes soot and smudgy coal. If there is no combustion there is no heat. The air that creates combustion is drawn into the fire box by the chimney draft, and by the same means the heat is circulated around the oven. If the heat does not circulate around the oven but makes the stove red hot on top it is proof that the heat is not reaching the oven and that the draft is imperfect. A hot stove with a cool oven shows that there is not sufficient draft to bring down the heat, so that to successfully bake the draft must be strong enough to completely permeate the oven with heat, but not so strong as to draw the heat all off. A stove itself has not draft and unless the conditions surrounding it are such as to give it these functions the best stove on earth will fail to make good.

GUARD FOR AIR DUCT IN HOT AIR FURNACE.



When there is a strong wind from the outside blowing into the air supply duct of a hot air furnace, the swinging damper shown in the illustration can be used to prevent the admission of too much air, says the Metal Worker. The

damper is hinged at the top and swings loosely in an enlarged entrance to the air supply duct. Under excessive wind pressure the damper is blown up against the opening of the duct leading to the furnace, closing it off and preventing the cold air from entering too freely.

HOLDER FOR SOLDERING IRON.

Many gasoline torches are not fitted with a holder for soldering irons. To such torches this convenience can be

attached in the shop. The illustration, from Power, shows how this is done. An old hose clamp, taken from ¾-inch garden hose and two pieces of wire are the materials used.

MARKETS AND MARKET NOTES

(For detailed prices see Current Market Quotations, page 93.)

THE WEEK'S MARKETS IN BRIEF.

MONTREAL.

Pig Iron—Advanced from 50 to 75c.
Pig Lead—Advanced 5c.
Old Rubbers—½c. advance.
Benzine—Declined 3¼c.

TORONTO.

Poultry Netting—2-inch mesh 50 and 5 off instead of 55 and 5.

Quebec Hardware Markets.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, August 3, 1906.

Business continues about fair. In some quarters trade is said to be slightly lower than it was last week, but the general opinion is that it has been about the same. Orders coming in are of very good size considering the season of the year. The volume of business being transacted in Summer lines is of just about the same size as this time last year, and merchants are satisfied with the trend of events. The Fall trade is opening up well and an excellent season is anticipated. Active inquiry for Fall lines is reported, particularly in guns and ammunition, in which there seems to be special interest displayed.

In prices this week there is nothing new as regards our quotations, figures quoted being steadily maintained, but a new set of prices has been issued on all Stanley goods, such as levels, plumbs, and rules.

AXES—The usual volume of business is being transacted. Our quotations: $7.60 to $9.50 per dozen; double bitt axes, $9.50 to $12 a dozen; handled axes, $7.50 to $9.50; Canadian pattern axes, $7.50 a dozen.

HANDLES — There has been no change since last report: No. 3 $1.25; No. 2, $1.50; No. 1, $1.90 a doz.; adze handles, 34-inch, $2.20 a dozen; pick handles, No. 2, $1.70; No. 3, $1.50 a dozen.

RIVETS AND BURRS—The market is without feature. Business is fairly good at prices which follow: Best iron rivets, section, carriage, and wagon box, black rivets, tinned do., copper rivets and tin swede rivets, 60, 10 and 10 per cent.; swede iron burrs are quoted at 60 and 10 and 10 per cent. off new lists; copper rivets with the usual proportion of burrs, 35 per cent. off; and coppered iron rivets and burrs in 5-lb. carton boxes at 60 and 10 and 10 per cent.; copper burrs alone, 30 per cent., subject to usual charge for half-pound boxes.

HAY WIRE—There has not been any improvement in trade since last week. Farmers are still busy with their hay and cannot give attention to pressing. Prices: No. 13, $2.45; No. 14, $2.55; No. 15, $2.70; net cash, f.o.b. Montreal.

MACHINE SCREWS—Business continues as usual. There is no feature in the market. Discounts still remain: Flat head iron, 35 per cent.; flat head brass, 35 per cent.; Felisterhead iron, 30 per cent.; Felisterhead brass, 25 per cent.

BOLTS AND NUTS—Trade is still very good on all sides. Discounts: 3-8 and smaller, 60 per cent. and 10 per cent.; 7-16 and larger, 55 per cent

HORSE NAILS — Dealers have no complaint to make as to the volume of business passing. Discounts still continue: C brand, 40, 10, and 7 per cent.; M.R.M. Co., 55 per cent.; P.B. brand, 55 per cent.

WIRE NAILS—All dealers do not quote the same price just now, but the average figure asked is $2.05 per keg base, f.o.b. Montreal.

CUT NAILS—There has been little improvement in the trade since last week. The price asked remains $2.20 per keg base, f.o.b. Montreal.

HORSESHOES—Very fair business is still passing in horseshoes. Prices: P. B. new pattern, base price $3.50 per 100 lbs.; M. R. M. Co., latest improved pattern iron shoes, light and medium pattern, No. 2 and larger, $3.65; No. 1 and smaller, $3.90; snow pattern, No. 2 and larger, $3.90; No. 1 and smaller, $4.15. Light steel shoes, No. 2 and larger, $4; No. 1 and smaller, $4.25; featherweight, all sizes, No. 0 to 4, $5.60. Toeweight, all sizes, No. 1 to 4, $6.85. Packing, up to three sizes in a keg, 10c. per 100 lbs. More than three sizes, 25c. per 100 lbs. extra.

SPORTING GOODS—There is more or less activity in the retail trade at present, but in the wholesale circles things are quiet. A very good season is anticipated for Fall. Inquiries have been numerous, particularly for guns and ammunition.

BUILDING PAPER—No change is noticeable. Conditions are about normal. Current quotations have not been changed.

CEMENT AND FIREBRICK — Very fair trade is passing in small lots, but there are few inquiries for large lots in cement. Firebrick is quiet. Our prices: "Lehigh" Portland in wood, $2.54; in cotton sacks, $2.39; in paper sacks, $2.31. Lefarge (non-staining) in wood, $3.40; Belgium, $1.60 to $1.90 per barrel; ex-store, American, $2 to $2.10 ex-cars; Canadian Portland, $2 to $2.05. Firebrick, English and Scotch, $17 to $21, American $30 to $35; White Bros.' English cement, $1.80 in bags, $2.05 in barrels in round lots.

COIL CHAIN—The market remains featureless and prices unchanged. We quote: 5-16 inch, $4.25; 3-8 inch, $3.75; 7-16 inch, $3.55; 1-2 inch, $3.35; 9-16 inch, $3.30; 5-8 inch, $3.20; 3-4 inch, $3.05; 7-8 inch, $3; 1 inch, $2.95.

FREEZERS—Retailers are doing very good business at present, while jobbers report an occasional order. Quotations remain: American Twin, 2 quart, $2.30, 3 qt. $2.65, 4 qt. $3.25, 6 qt. $4.15, 8 qt. $5.10, 10 qt. $6.40, 12 qt. $7.75, 15 qt. $9.95, and 20 qt. $13; Gem, 1 pt. $1.35, 1 qt. $1.60, 2qt. $1.75, 3 qt. $2.15, 4 qt. $2.60, 6 qt. $3.25, 8 qt. $4.20, 10 qt. $5.45, 12 qt. $6.50, 14 qt. $7.25; Blizzard, 1 qt. $1.25, 2 qt. $1.70, 3 qt. $1.95, 4 qt. $2.35, 6 qt. $2.95, 8 qt. $3.70, 10 qt. $4.80, 12 qt. $5.75, 14 qt. $6.75.

GREEN WIRE CLOTH — In some quarters there is still a little business passing, but on the whole this line is very quiet. Price remains: $1.45 per 100 square feet.

AMMUNITION—Ammunition is looking up well for Fall and we are now able to quote: Loaded with black powder, 12 and 16 gauge, per 1,000, $15; 10 gauge, per 1,000, $18; loaded with smokeless powder, 12 and 16 gauge, per 1,000, $20.50; 10 gauge, $23.50.

Ontario Hardware Markets.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, Aug 3, 1906.

Hardware in general lines is quieter now, although a good steady business continues to be done. Fall lines are brisk, particularly firearms and ammunition.

There has been an advance made in poultry netting, two-inch mesh now selling at 50 and 5 per cent. off, instead of 55 and 5. Other sizes remain as before.

A great shortage in bolts and nuts is experienced. It is almost impossible to place contracts with the expectation of having them filled in anything like reasonable time, and some jobbing houses are finding it necessary to negotiate with Old Country firms for supplies.

AXES AND HANDLES—The usual trade continues to be done.

CUTLERY AND SILVERWARE—A good demand is felt for these lines.

SPORTING GOODS—Arms and ammunition are selling well.

SCREEN DOORS AND WINDOWS—The demand is pretty well met in these goods.

HAMMOCKS—Hammocks continue to sell well.

LAWN MOWERS AND HOSE—Business is quieter but still good.

REFRIGERATORS AND FREEZ-

ERS—Not a great many of either are being sold.

WASHING MACHINES—A normal demand is noted.

CHAIN—We quote as follows: 1 inch, $6.60; 5-6 inch, $4.55; 3-8 inch, $3.95; 7-16 inch, $3.80; 1-2 inch, $3.65; 9-16 inch, $3.55; 5-8 inch, $3.45; 3-4 inch, $3.35.

EXTENSION AND STEP LADDERS—Prices continue as follows: Step ladders at 10c. per foot for 3 to 6 feet, and 11c. per foot for 7 to 10 feet ladders. Waggoner extension ladders, 40 per cent.

POULTRY NETTING — An advance has been made this week, and sales are reported good. We quote: 2-in. mesh, 19 w.g., discount 50 and 5 per cent. All others 50 per cent.

GALVANIZED WIRE—We quote: $2.17 1-2 f.o.b. Cleveland.

BARB WIRE—Prices remain the same. We quote: On gauge 9, $2.40; guage 12, $2.55; gauge 13, $2.65; f.o.b. Toronto.

OILED AND ANNEALED WIRE—(Canadian)—Gauge 10, $2.31; gauge 11, $2.37; gauge 12, $2.45 per 100 lbs.

WIRE NAILS—The open market continues. We quote: $2.05 base.

CUT NAILS—We quote: $2.20 base, f.o.b. Montreal. Toronto, 20c. higher.

HORSENAILS—"C" brand, 40, 10 and 7 1-2 off list. "M.R.M." brand, 55 per cent. off. "Monarch" brand, 50 and 7 1-2 off. "Peerless," 50 per cent. off.

HORSESHOES—Our quotations continue as follows: P.B. base, $3.65; "M.R.M. Co., latest improved pattern" iron shoes, light and medium pattern, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; snow, No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $4.15; No. 1 and smaller, $4.40; featherweight, all sizes, 0 to 4, $5.75; toeweight, all sizes 1 to 4, $7. Packing, up to three sizes in a keg, 10c. per 100 lbs. extra; more than three sizes in a keg, 25c. per 100 lbs. extra.

RIVETS AND BURRS—Tinned rivets have been advanced and are now quoted net extra 4 cents per lb.

SCREWS—We quote: On gimlet point 70 and 5 per cent. off; on cone point, 70 and 10 per cent. off list.

BOLTS AND NUTS—Prices very firm with stocks low. We quote: 55 and 10 per cent. off list.

CEMENT—We quote: For carload orders, f.o.b. Toronto, Canadian Portland, $1.95. For smaller orders ex warehouse, Canadian Portland, $2.05 upwards.

FIREBRICK—English and Scotch fire brick, 27c. to 30c.; American low-grade, 23c. to 25c.; high-grade, 27 1-2c. to 35c.

KELSEY SYSTEM FOR BOLTON.

The James Smart Manufacturing Co., of Brockville, have been awarded the contract for placing the Kelsey system of warming and ventilating in the Presbyterian church at Bolton, Ont.

Canadian Metal Markets.

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, August 3, 1906.

Trade is keeping up wonderfully well. Dealers are surprised at the amount of business which is passing at this time of year when everyone expects a quiet season. Good sized orders are being received by jobbing houses daily. There are several changes in the prices this week.

Pig lead, which declined last week, is up again. There is no way of knowing just how long prices will stay as they are at present, owing to the manner in which the market is fluctuating. There is more or less trade being transacted.

In pig iron prices have been advanced in three instances. There is an upward tendency in the market under an active demand.

Antimony supplies are said to be short. Some dealers state that their stocks are not at all large. The market is weaker, but prices have not changed. For quantities it is sometimes necessary to shade prices.

There has been no change in the price of zinc spelter since last report. The market, however, is distinctly firmer than last week.

Ingot tin is practically unchanged since last week, while ingot copper is very firm.

COPPER—Since last week there has been no change in the market conditions. Demand is good, and while there is no actual scarcity, there is no overplus available for prompt shipment. We are quoting: Ingot copper, 21c. to 21½c.; sheet copper, base sizes, 25c.

INGOT TIN—Conditions are somewhat similar to those of last week. The market has been going up and down, but at the time of writing the tone is firmer with an upward tendency. Prices remain: 41½c. to 42c. per pound.

ZINC SPELTER—The market has firmed up a trifle and this week is distinctly firmer than last. Prices are unchanged at $6.75 to $7 per hundred pounds.

ANTIMONY—The market is somewhat weaker but there is no change in the price. Supplies are said to be limited and for quantities it is sometimes necessary to shade prices. Dealers are asking 27c. per pound.

PIG LEAD—There has been an advance of five cents since last week and we are now quoting $4.35 to $4.45.

PIG IRON—There is an upward tendency in pig iron for which there is an active demand. Three changes in prices will be noticed this week. Prices asked are:

"Dom.," No. 1.$19.50 to $20.00 delivered Montreal
Usual difference in price for lower grades.

Ferrona No. 1	$19 50	delivered	Montreal
" No. 2	19 00	"	"
" No. 3	18.50	"	"
" No. 4	18.00	"	"
Londonderry	20.50	"	"
Carron No. 1	22.00	"	"
" (special)	21.00	"	"
Summerlee No. 1	22.00	"	"
" No. 3 (soft)	21 00	"	"
Clarence No. 1	19.00	"	"
" No. 3	18.50	"	"
Cleveland No. 1	19.00	"	"

BOILER TUBES—The market remains unchanged and quotations are: British and American tubes, 1¼ inch, 8½c.; 2 inch, 8½c.; 2½ inch, 10c.; 3 inch, 12c.; 3½ inch, 15¾c.; 4 inch, 20c.; 5 inch, 45c. Price per foot net.

TOOL STEEL—There has been no change in the situation since last report. Prices remain as follows: Colonial Black Diamond, 8c. to 9c.; Sanderson's, 8c. to 45c., according to grade; Jessop's, 13c.; Jonas & Colver's, 10c. to 20c.; "Air Hardening," 65c. per pound; Conqueror, 7½c.; Conqueror High Speed Steel, 60c.; Jowitt's Diamond J., 6¼c. to 7c.; Jowitt's Best, 11c. to 11½c.

MERCHANT STEEL — Very fair business is being done at the following prices: Sleigh shoe, $2.17½; tire, $2.27½; spring, $2.75; toecalk, $2.82½; machinery iron finish, $2.27½; ruled machinery steel, $2.75; mild, $2.17½ and upwards; square harrow teeth, $2.27½. Net cash 30 days. Rivet steel quoted on application.

COLD ROLLED SHAFTING — The market remains unchanged and prices are still: 3-16 inch to 1-4 inch, $6.80; 5-16 inch to 11-32 inch, $5.78; 3-8 inch to 17-32 inch, $4.76; 9-16 inch to 47-64 inch, $4.08; 3 1-8 inch to 3 7-16 inch, $3.60; 3-4 inch to 1 7-16 inch, $3.75; 1 1-2 inch to 3 inch, $3.50; 3 1-2 inch to 3 15-16 inch, $3.75; 4 inch to 4 7-16 inch, $4.08; 4 1-2 inch to 4 11-16 inch, $4.42.

GALVANIZED IRON—There is good inquiry for this line at present. There is some talk of an advance in prices. We are quoting as follows: Queen's Head, 28 gauge, $4.35 to $4.60; 26 gauge, $4.20; 22 to 24 gauge, $3.65; 16 to 20 gauge, $3.50; Apollo, 28 gauge, $4.25 to $4.50; 26 gauge, $4.10; 22 and 24 gauge, $3.55; 16 to 20 gauge, $8.40; Comet, 28 gauge, $4.25 to $4.50; 26 gauge, $4.10; 22 and 24 gauge, $3.55; 16 to 20 gauge, $3.40; Bell brand, 28 gauge, $4.40 to $4.45; Fleur-de-Lis, 28 gauge, $4.20 to $4.45; 26 gauge, $4.05; 22 and 24 gauge, $3.50; 16 to 20 gauge, $3.35; Gorbal's "Best Best," 28 gauge, $4.20 to $4.45; "Windmill Best," 28 gauge, $4.15; Sword and Torch, 28 gauge, $4.15; Colborne Crown, 28 gauge, $4.20 to $4.45. In less than case lots 25c. extra.

BLACK SHEETS—Conditions remain unchanged and we are still quoting: 28 gauge, $2.40; 26 gauge, $2.35; 22-24 gauge, $2.30; 19-20 gauge, $2.30; 8-10 gauge, $2.45.

CANADA PLATES—Business is not so good as it has been. Prices continue: 52's, $2.60; 60's, $2.65; 75's, $2.75; full polished, $3.75 to $4; galvanized, 52's, $4.10; 60's, $4.35.

TINPLATES—The bottom is about reached and higher prices are expected. At present: Cokes, base size, 1C 14x20, $4; charcoal, base size, 1C, 14x20, $4.25.

TERNE PLATES—The price quoted is still $6.85.

SHEET ZINC—There has been no change in the market since last week and

prices remain : $7.75 in casks, $8 in less than casks.

SHEET LEAD—Quotations are still : 2½ lbs., 5½c. by the roll ; 3 lbs. and heavier, 5¼c. by the roll ; small quantities, 25c. per hundred lbs. extra.

BAR IRON—The price remains unchanged at $2.05 base f.o.b. Montreal.

OLD MATERIAL—Market very quiet. There is a slight improvement in the price of copper. Old rubbers have been advanced slightly since last report. We quote prices as follows: Light copper 14½c. ; heavy red brass, 14½c. ; yellow brass, 11½c. ; light brass, 7½c. ; lead, 3¼c. ; zinc, 4c. ; machinery cast scrap, $13 ; wrought scrap, $12 ; stove plate scrap, $10.50 to $11 ; mixed rags, $1 to $1.20 per 100 lbs. ; old rubbers, 7¾c.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, August 3, 1906.

For mid-summer, trade has been unusually good in metals, but at present there are no features in regard to price. Tin is active, but the price keeps about the same. The week opened with good buying, but later it has fallen off some. Tinplates and galvanized sheets are active, but unchanged in price, with stocks of the latter said to be light.

Beyond the usual business there is nothing particular doing in brass, but copper is very firm and active. Lead is quiet at present with no change in price. Old contracts in antimony are running out and more activity is shown, although prices are still considered high. Old material is quiet with no price changes.

PIG IRON—Trade is good for midsummer. We quote as follows: Radnor at furnace, $30 ; Hamilton at furnaces, No. 1, $20.50 ; No. 2, $20 ; Londonderry, f.o.b., Toronto, No. 1, $21.50, No. 2, $21 ; Middleborough, $21.50.

BAR IRON—Demand is not heavy. We quote: $2.15 base, f.o.b. Toronto, with discount of 2 per cent. net cash.

INGOT TIN—Tin continues about the same with the usual fluctuations. Quotations are 41c. and 42c. per lb.

TIN PLATES—Trade is active with prices unchanged. We quote: Cokes, base size, 14x20, $4 ; charcoal, base size, 14x20, $4.50.

GALVANIZED SHEETS—Prices are well maintained and stocks are said to be light. We quote: 16 to 20 gauge, $3.45 up.

BRASS—The market continues firm with no price changes. We quote: 23c. to 24c. per lb.

COPPER—There has been more activity felt than for some time past Prices are firm at the same quotations. Our prices are: Ingot copper, $20 per 100 lbs. and sheet copper, $25 per 100 lbs.

LEAD—There is not much trading in lead at present. Local dealers are quoting $4.40 for imported pig, and $5 per 100 lbs. for bar lead.

ZINC SPELTER—The market is quiet and prices remain unchanged. We quote : 7¼c. per lb. for foreign and 5¾c. to 6c. per lb. for domestic.

BOILER PLATES AND TUBES — A lively demand is experienced. Our prices are: Plates, per 100 lbs., $2.35; heads, per 100 lbs., $2.60 ; tank plates, 3-16 inch, $2.45 ; tubes, per 100 feet, 1½ inch, $8.50 ; 2, $8.80 ; 2½, $10.75 ; 3, $12 ; 3½, $15.80 ; 4, $20. Terms, 2 per cent. off.

ANTIMONY — Prices are unchanged and 27c. is quoted.

OLD MATERIAL — Dealers' buying prices are as follows : Heavy copper and wire, 15c. per lb. ; light copper, 13½c. per lb. ; heavy red brass, 13c. per lb. ; heavy yellow brass, 11c. per lb. ; light brass, 8¼c. per lb. ; tea lead, $3.25 per 100 lbs. ; heavy lead, $3.50 per 100 lbs.; scrap zinc, 4½c. per lb. ; iron, No. 1 wrought, $11 to $11.50 ; No. 2 wrought, $3 to $5 ; machinery cast scrap, $13.50 to $14 ; stove plate, $10 ; malleable and steel, $5 ; old rubbers, 7¾c. per lb. ; country mixed rags, $1 to $1.25 per 100 lbs., according to quality.

COAL—We quote the following prices: Anthracite in cars at bridge, egg, stove and nut, $5.30 ; grate, $5.05 ; pea $3.60, per gross ton.

Standard Hocking, soft coal, in cars, f.o.b. at mines : Lump, $1.50 ; ¾ inch, $1.40 ; run of mine, $1.30 ; nut, $1.25 ; N. P. and S., $1 ; slack, 75c. ; box cars, 10c. per ton additional.

Youghiogheny soft coal in cars, bonded at bridges : 1¼ inch, $2.50 ; ¾ inch, $2.40 ; mine run, $2.30 ; slack, $2.05.

For Manitoba, British Columbia and Maritime Provinces markets see pages following.

LONDON METAL MARKETS.

From Metal Market Report, July 31, 1906.

PIG IRON—Cleveland warrants are quoted at 51s. 1 1-2d., and Glasgow standard warrants at 50s. 9d., making prices as compared with last week 1 1-2d. lower for Cleveland warrants and 9d. higher for standard warrants.

TIN—Spot tin opened easy at £170 15s., futures at £171, and after sales of 40 tons of spot and 330 tons of futures closed quiet at £170 12s. 6d for spot, £170 17s. 6d. for futures, making price compared with last week 7s. 6d. higher on spot, and £1 2s. 6d. higher on futures.

COPPER—Spot copper opened easy at £82 10s., futures £81 12s. 6d., and after sales of 300 tons of spot and 300 tons of futures, closed steady at £82 10s. for spot, and £81 12s. 6d. for futures, making price as compared with last week the same on spot and 7s. 6d. higher on futures.

LEAD—The market closed at £16 13s. 9d., making price as compared with last week 1s. 3d. lower.

SPELTER—The market closed at £26 10s., making price as compared with last week 2s. lower.

British Columbia Trade News

Vancouver, B.C., July 27, 1906.

This year is marked in Vancouver by the erection of two large modern abattoirs. Messrs. P. Burns & Co. are proceeding with one east of the city on Burrard Inlet. The other is being erected at Eburne by the B. C. Market Co, The former company has a large cold storage plan already in existence in the city, and the B. C. Market Co. is proceeding with the erection of a large new cold storage building also in the city. This will have rail facilities, as the new abattoir at Eburne, on the Fraser River, is several miles from the city and the fresh meats are to be brought in by electric railway in refrigerator cars. The new abattoir is to have capacity for killing and handling per day, 50 cattle, 40 hogs, and 200 sheep. The cost will be about $100,000 exclusive of the cost of the cold storage plant. Cement, concrete and stone will be the materials used, almost entirely.

* * *

For the Dawson City fire protection service, which the Dawson Waterworks Co. have a contract to instal and maintain, about 3 1-2 miles of 6-inch wood stave, wire-wound pipe was shipped north by the steamer Duneric a few days ago. The system will be entirely separat from the domestic water supply. A fire pressure will be maintained at all times and in Winter the same device as used in the domestic water service, of driving live steam into the mains will be resorted to to prevent freezing. In addition, small sentry-box houses with fires in them will be maintained over each hydrant in cold weather. Mr. R. P. McLennan, of McLennan, McFeely & Co., wholesale hardware merchants, this city, is president of the Dawson Waterworks Co.

* * *

Another trans-Pacific steamer line is projected, this time from Seattle to Australia. Frank Waterhouse, vice-president of the Boston Steamship Co., is at the head of the movement. He leaves for England in a few days to consult with London capitalists regarding the project. It is designed to run steamers with sailings every month from each end of the route, Sydney and Melbourne being the Australian ports of call, with Honolulu taken in en route each way. A regular service from San Francisco and that maintained from Vancouver by the Canadian-Australian SS. Co., a branch of the C.P.R. steamship service, have been the only means of communication direct from this coast heretofore. For many years, and in fact until quite recently, the Vancouver line did not prove a very paying venture, the mail subvention from the Canadian and Australian governments being the chief inducement to continue.

* * *

Lester W. David, head of the Fraser River Saw Mills, Limited, the big company which now owns and operates the former McLaren-Ross mill on the Fraser

above New Westminster, is authority for the opinion that lumber prices have reached their limit for this season. It will come as a big relief to buyers, that the price is not to be boosted any further this year. Perhaps, on the principle that it is wise to let well enough alone, the millmen have come to the conclusion it would not do to spoil the good thing they certainly have this year. Prices never were so high, and demand is such that it looks as if next season would not suffice to catch up with the business.

The result of increased trade has been that a number of new mills are projected. The Anglo-American Lumber Co., which is now building in Vancouver, is the only large mill to get down to construction this year. The Small & Bucklin Lumber Co. at New Westminster, started operations this year but their plant was built last year. The Fraser River Saw Mills also started up this year, though they spent last year equipping. The Harrison River mill, rebuilt by the present owners, the Rat Portage Lumber Co., is now having its plant installed and next season will be operating. The Vancouver Lumber Co. installed a complete new plant on a large scale. It began cutting lumber about the middle of the present season.

Two or three other concerns, mainly of American origin, are looking into the lumber proposition here with the intention of building mills.

* * *

A dynamite manufactory is to be erected on the shores of Burrard Inlet, not many miles from Vancouver. A company of local business men has been formed with R. P. McLennan at its head, which will establish the new industry.

* * *

Work on the Nicola branch of the C.P.R. has practically been completed and work will now begin on the extension from Coutlee, the present terminus to Nicola Lake, which is some miles further. To Coutlee, from Spences' Bridge, where connection is had with the main line, is sixty miles, and this portion has been opened for regular traffic since the first of the month. Messrs. Ironsides, Rannie & Campbell, a local contracting firm, have the contract for the extension to Nicola Lake. The C.P.R. is said to ultimately plan to extend via Princeton and Penticton (the latter at the foot of Okanagan Lake) to Midway, the present terminus of the C. & W. branch in the boundary country.

THE WINNIPEG PLUMBERS.

The plumbers' strike in Winnipeg is still on, although it is reported that the masters are keeping their work on the go. A Winnipeg master plumber has been in Toronto for some days getting strike breakers, it is said, to go west, but the majority of those who have open shops state that they are acting independently in the matter of getting men and have made no organized effort to import strike breakers.

Hardware and Metal Conditions in Manitoba

(Market quotations corrected by telegraph up to 12 a.m. Friday, Aug. 3, 1906.)

Office of HARDWARE AND METAL,
Room 511, Union Bank Building,
Winnipeg, Man.

Business is very active in all general lines. Values are steady, the only quotable change being a slight decline in grindstones.

GREEN WIRE CLOTH—Quoted at $1.55 per 100 square feet.

LANTERNS—Prices are quoted as follows: Cold blast, $5.25; coppered cold blast, $7.25; cold blast dash, $7.75; lift, $4.25 per doz.

WIRE — We quote as follows: Barbed wire, 100 lbs., $2.90; plain galvanized, 6 to 8, $3.39; 10, $3.50; 12, $3.10; 13, $3.20; 14, $3.90; 15, $4.45; 16, $4.60; plain twist, $3; staples, $3.50; oiled annealed wire, 10, $2.96; 11, $3.02; 12, $3.10; 13, $3.20; 14, $3.30; 15, $3.45. Annealed wires (unoiled) 10c. less.

HORSESHOES — Quotations are as follows: Iron, No. 0 to No. 1, $4.65; No. 2 and larger, $4.40; snowshoes, No. 0 to No. 1, $4.90; No. 2 and larger, $4.65; steel, No. 0 to No. 1, $5; No. 2 and larger, $4.75.

HORSENAILS — Lists and discounts are quoted as follows: No. 10, 20c.; No. 9, 22c.; No. 8, 24c.; No. 7, 26c.; No. 6, 28c.; No. 5, 32c.; No. 4, 40c., per pound. Discounts are quoted as follows: "C" brand, 40, 10 and 7½ per cent., "M" brand and other brands, 55 and 60 per cent. Add 15c. per box.

WIRE NAILS—Steady at $2.60 per keg.

CUT NAILS—Quoted now at $2.70 per keg.

PRESSED SPIKES—Prices are as follows: ¼ x 5 and 6, $4.60; 5-6 x 5, 6 and 7, $4.25; ⅝ x 6, 7 and 8, $4.10; 7-16 x 7 and 9, $4.00; ½ x 8, 9, 10 and 12, $3.90; ⅝ x 10 and 12, $3.75.

SCREWS—Discounts are as follows: Flat head, iron, bright, 85 and 10 p.c.; round head, iron, 80 p.c.; flat head, brass, 75 and 10 p.c.; round head, brass, 70 and 10 p.c.; coach, 70 p.c.

NUTS AND BOLTS — Discounts are unchanged and continue as follows: Bolts, carriage, ⅝ or smaller, 60 and 5; bolts, carriage, 7-16 and up, 55; bolts, machine, ⅝ and under, 55 and 5; bolts, machine, 7-16 and over, 55; bolts, tire, 65; bolt ends, 55; sleigh shoe bolts, 65 and 10; machine screws, 70; plough bolts, 55; square nuts, case lots, 3; square nuts, small lots, 2½, hex nuts, case lots, 3; hex nuts, smaller lots, 2½ p.c.

RIVETS—Quoted now as follows: Iron, 60 and 10; copper, No. 8, 34½; copper, No. 12, 40 p.c.

COIL CHAIN — Unchanged in price. We quote: 3-16 inch, $9.25; 5-16, $5.20; 7-16, $4.45; ⅜, $4.10; ¼, $7.20; ⅝, $4.60; ½, $4.30; ¾, $4.

SHOVELS—Discounts on spades and shovels continue 40 and 5 p.c.

HARVEST TOOLS — Discounts continue 60 and 5 p.c.

AXE HANDLES—Quoted as follows: Turned, s.g. hickory, doz., $3.15; No. 1, $1.90; No. 2, $1.60; octagon, extra, $2.30; No. 1, $1.60.

AXES—Prices quoted as follows: Bench axes, 40; broad axes, 25 p.c. discount off list; Royal Oak, per doz., $6.25; Maple Leaf, $8.25; Model, $8.50; Black Prince, $7.25; Black Diamond, $9.25; Standard flint edge, $8.75; Copper King, $9.00; Columbian, $10.75; handled axes, North Star, $7.75; Black Prince, $9.25; Standard flint edge, $10.50; Copper King, $11 per doz.

BUTTS — The discount on wrought iron butts if 70 p.c.

CHURNS— The discounts from list continue as before: 45 and 5 per cent.; but the list has been advanced and is now as follows: No. 0, $9; No. 1, $9; No. 2, $10; No. 3, $11; No. 4, $13; No. 5, $16.

CHISELS—Quoted at 70 p.c. off list prices.

AUGER BITS—Discount on "Irwin" bits is 47 1-2 per cent., and on other lines 70 per cent.

BLOCKS—Discount on steel blocks is 35 p.c. off list prices; on wood, 55 p.c.

FITTINGS — Discounts continue as follows: Wrought couplings, 60; nipples, 65 and 10; T's and elbows, 10; malleable bushings, 50; malleable unions, 55 p.c.

GRINDSTONES—The price has declined 1-4c. per lb. and quotation is now 1 1-2c. per lb.

FORK HANDLES — The discount is 40 p.c. from list prices.

HINGES—The discount on light "T" and strap hinges is 65 p.c. off list prices.

HOOKS — Prices are quoted as follows: Brush hooks, heavy, per doz., $8.75; grass hooks, $1.70.

STOVE PIPES—Quotations are as follows: 6-inch, per 100 feet length, $8.50; 7-inch, $9.25.

DRAW KNIVES—The discount is 70 per cent. from list prices.

RULES—Discount is 50 per cent.

WASHERS—On small quantities the discount is 35 p.c.; on full boxes it is 40 p.c.

WRINGERS—Quotations are: Royal Canadian, $33; B.B., $37.75 per doz.

FILES—Discounts are quoted as follows: Arcade, 75; Black Diamond, 60; Nicholson's, 62½ p.c.

BUILDING PAPER — Prices are as follows: Plain, Joliette, 40c.; Cyclone, 55c.; Anchor, 55c.; pure fibre, 60c.; tarred, Joliette, 65c.; Cyclone, 80c.; Anchor, 65c.; pure fibre, 80c.

TINWARE, ETC. — Quoted as follows: Pressed, retinned, 70 and 10; pressed, plain, 75 and 2½; pieced, 30; japanned ware, 37½; enamelled ware, Famous, 50; Imperial, 50 and 10; Imperial, one coat, 60; Premier, 50; Colonial, 50 and 10; Royal, 60; Victoria, 45; white, 45; Diamond, 50; Granite, 60 p.c.

CORDAGE—Quotations are as follows: Rope, sisal, 7-16 and larger, basis, $11.25; Manila, 7-16 and larger,

basis, $15.75; Lathyarn, $11.25; cotton rope, per lb., 21c.

SOLDER—Quoted at 27c. per pound. Block tin is quoted at 45c. per pound.

VISES — Prices are quoted as follows: "Peter Wright," 30 to 34 14½c.; 35 to 39, 14c.; 48 and larger, 13½c. per lb.

ANVILS—"Peter Wright" anvils are selling at 11c. per lb.

CROWBARS—Quoted now at 4c per lb.

POWER HORSE CLIPPERS — The "1902" power horse clipper is selling at $12, and the "Twentieth Century" at $6.00. The "1904" sheep shearing machines are sold at $13.60.

AMMUNITION, ETC.—As noted last week, shot has been advanced 25 cents per 100 lbs. We quote prices as follows: Cartridges, Dominion R. F., 50 and 5; Dominion, C.F., pistol, 30; military, 20; American R.F., 33½; C.F., pistol, 5 p.c.; C.F., military, 10 p.c. advance. Loaded shells: Dominion Eley's and Kynoch's soft, 12 gauge, black, $16.50; chilled, 12 gauge, $17.50; soft, 10 gauge, $19.50; chilled, 10 gauge, $20.50. Shot, ordinary, per 100 lbs., $7.25; chilled, $7.75; powder, F.F., keg, Hamilton, $4.75; F.F.G., Dupont's, $5.00.

IRON AND STEEL—As the result of continued cutting, bar iron has been reduced to 20 cents per cwt. Quotations now are as follows: Bar iron (basis), $2.50; Swedish iron (basis), $4.75; sleigh shoe steel, $2.75; spring steel, $3.25; machinery steel, $3.50; tool steel, Black Diamond, 100 lbs., $9.50; Jessop, $13.00.

SHEET ZINC — The price is now $8.50 for cask lots, and $9.00 for broken lots.

PIG LEAD—The pig lead market is still reported very firm and local prices are maintained steadily. The price is $5.25 per cwt. with a reduction of 25c. per 100 lbs. on ton orders.

AXLE GREASE—"Mica" axle grease has been advanced to $2.75 per case and "Diamond" to $1.60.

BLACK IRON PIPE—Quotations are: ¼ inch, $2.45; ⅜, $2.85; ½, $3.15; ¾, $4; 1, $5.75; 1¼, $7.85; 1½, $9.40; 2, $12.90.

GALVANIZED IRON — Quotations are: Apollo, 16 gauge, $3.90; 18 and 20, $4.10; 22 and 24, $4.45; 26, $4.40; 28, $4.65; 30 gauge or 10¾ oz., $4.95; Queen's Head, 24, $4.65; 26, $4.65; 28, $4.90.

TIN PLATES—We now quote as follows: IC charcoal, 20 x 28, box, $9.50; IX charcoal, 20 x 28, $11.50; XXI charcoal, 20 x 28, $13.50.

TERNE PLATES—Quoted at $9.00.

CANADA PLATES—Prices have been steady since the recent decline. We quote: Canada plate, 18 x 21, 18 x 24, $3.15; 20 x 28, $3.40; full polished, $3.90.

BLACK SHEETS—Prices are: 10 to 16 gauge, 100 lbs., $3.50; 18 to 22, $3.75; 24, $3.90; 26, $4.00; 28, $4.10.

PETROLEUM AND GASOLINE — Prices are quoted as follows: Silver Star, per gal., 21c.; Sunlight, 22c.; Eocene, 24c.; Pennoline, 25c.; Crystal Spray, 24c.; Silver Light, 22c.; gasoline, 70-72 (engine), 25½c., in barrels f.o.b. Winnipeg.

PAINTS, OILS AND TURPENTINE —Prices are now quoted as follows: White lead, pure, $7; bladder putty, in bbls., 2½cf; in kegs, 3¾c.; turpentine, pure, in barrels, 97c.; less than barrel lots, 92c.; linseed oil, raw, 64c.; boiled, 67c.

WINDOW GLASS — We quote: 16-oz. O.G., single, in 50-ft. boxes—16 to 25 united inches, $2.25; 26 to 40, $2.40. 16-oz. O.G., single, in 100-ft. cases — 16 to 25 united inches, $4.00; 26 to 40, $4.52; 41 to 50, $4.75; 51 to 60, $5.25; 61 to 70, $5.75. 21-oz. C.S., double, in 100-ft. cases—26 to 40 united inches, $7.35; 41 to 50, $8.40; 51 to 60, $9.45; 61 to 70, $10.50; 71 to 80, $11.55; 81 to 85, $12.60; 86 to 90, $14.75; 91 to 95, $17.30.

Nova Scotia Trade News.

Halifax, N.S., July 31.

The stove trade in the Province of Nova Scotia was never in a healthier condition than at the present time. The business generally throughout the year has been remarkably good, and the prospects for the coming season were never brighter. James Hillis, of the firm of Hillis & Sons, the largest manufacturers of stoves and ranges in this province, told the correspondent of Hardware and Metal that the demand was never greater in his long experience in the business. His foundry is running full blast, and it is with difficulty that they are able to keep up with orders. The demand is for the very best class of goods. No cheap stoves are sold now in this city. No person appears to want them no matter how cheap they are. This firm's business has shown a steady increase every month during the year, and orders are still flowing in. The one great drawback, said Mr. Hillis, is the scarcity of skilled labor. This has a great effect on the industry, as without workmen it is impossible to keep up with the orders.

In the cooking line, ranges are all the demand. This firm manufacture the celebrated Richmond range, which has asbestos lined ovens, highly nickeled movable rails, heat indicator, etc.

For heating purposes base burners are now used almost exclusively, and only high-class goods are being sold. It is almost impossible to sell a cheap base burner now.

Furnaces are also coming into greater favor, and sales are increasing. Mr. Hillis says that not only his foundry but all the foundries in the province are doing a prosperous business and that the outlook for the future is most promising.

* * *

The Dominion Coal Co. recently shipped a five thousand cargo of coal to Mexico. When the cargo reaches its destination it will be put through a series of tests. If these are successful then the chances are that some of the railway companies in that country may enter into contracts with the coal company.

* * *

The Maritime Heating Co., of Amherst, has been awarded the contract for supplying two large boilers and a number of radiators to the Stanley House at Truro. An order for radiators has also been received from the trustees of the new school at Richibucto, N.B.

New Brunswick Trade News

St. John, July 31, 1906.

It is a matter of some difficulty to speak with precise accuracy regarding the stove trade in New Brunswick during the past year. This is the case because the reports from the various parts of the province differ. Perhaps, however, one will be safe in saying that on the whole the past year was a satisfactory one for the persons engaged in the trade. In St. John several of the dealers say that the year was an excellent one for them. One gentleman even went so far as to say that he had rarely had a better year in a business life extending over quite a number of years. Then, again, there are some who assert that their business in stoves fell off a bit during the past twelve months, though their trade in other lines of hardware was well up to or better than the average. It will probably be found on taking the average that the dealers have done a very fair year's trade. One explanation given for the dropping off of sales experienced by some is that where formerly many country people came to the city to purchase their stoves they are now able to buy them through the country stores and through agents, and consequently the sales of the city merchants have not been so good as in other seasons. At present the outlook for Fall and Winter business seems very satisfactory. Of course a good deal depends upon the weather prevailing in the coming months, but given a normal Fall and Winter, the stove and furnace travelers look for a busy time. The representative of one well-known provincial firm said a day or so ago that to date he has booked more orders for the coming season than he had secured at the corresponding time last year. He, for one, anticipates a brisk trade for the stove-dealing houses.

The opinion of the dealers seems to be that the sale of the cheaper class of stoves is growing. Many people apparently prefer to purchase cheap stoves several times in a number of years rather than one of the expensive variety which will last as long, or nearly as long, as several of the cheaper style. However, it is noticeably a fact that the steel range is becoming a better seller in this province now than it was a few seasons back. It promises to be a stronger favorite this year than ever before.

While there are a number of Maritime Province foundries turning out excellent lines of stoves and furnaces, it is still a fact that the goods put on the market by Upper Canadian houses are strong sellers in many sections of the provinces. That the case is as stated is held to be due to the fact that at least some of these western concerns show a readiness to put their rates down, apparently with a view to capturing the eastern market.

Not much change in prices is anticipated this Fall. At a recent meeting of the stove men's association it is understood that the price question was under discussion and that some of the associated members advocated a revision of the price list. It was decided, however, that nothing need be done save to take care to see that the cutting of rates does not obtain this season.

FOUNDRY AND METAL INDUSTRIES

The Berlin Machine Works Co., of Beloit, Wisconsin, will establish a Canadian branch at Hamilton, Ont. Their plant will cost $500,000 and will employ 250 men.

The Peterborough Steel Rolling Mills Co. are considering the claims of Peterborough, Port Hope, Cobourg and Lakefield as the site for rolling mills that will be established soon.

THE DEATH OF METALS.

Recently a strange thing in metallurgy happened. A ship was loaded with Banca tin in the straits, and sailed for a northern port in Europe. When it arrived there and the work of unloading the valuable cargo began, the merchants to whom it was consigned were amazed to discover that the entire shipment had actually crumbled into dust. Here was a mystery. For a long time no one could solve it. Years ago, says the Philadelphia Record, it would have finally been dismissed with the statement that there must have been a flaw or fault in the tin. But the flaw theory had become unsatisfactory.

Then Prof. Bredig, the famous German metallurgist, came out with photographs that he had made in a church in Silesia. The pictures showed the remnants of organ pipes, most of them full of queer, crumbling holes. Whole pipes had vanished absolutely. There was no rust, and all investigation failed to show any other of the causes that are known as destroyers of metals. All investigators at last confessed themselves nonplussed, until Professor Bredig, who had been busy with new theories of the diseases of metals, found a wound, a genuine, open wound in a pipe; and his careful, accurate and rigid experiments furnished the convincing proof that this wound had infected the entire series of pipes with a creeping disease.

Scarcely had he finished his investigations in the Silesian church, before a coincidence enabled him to extend his experiments, and at the same time obtain additional proof of the correctness of the previous findings. He was asked to inspect the great tin roof of the council house of Rothenburg. Arrived there, he was informed that several years ago the roof, although it had been attended to carefully, painted regularly, and kept perfectly free from rust, had begun to crumble away. No one could imagine what caused it. Prof. Bredig soon discovered a centre of infection. And he was able not only to trace the gradual progress of the infection over the council house roof, but to show where the disease had actually spread to a tin roof near by.

Another German professor, Dr. Heyn, had been studying the changes in iron under all grades of temperature, and he also concluded that the metal passes through various stages of disease that produce structural changes just as cells change in form, size and position in the forms commonly called organic. He heated copper in order to find why that metal suffers from overheating, and his conclusion is that it becomes poisoned with copper protoxide, which so sickens it that its structure changes, and partially breaks down. Metals, he has proven, can be infected with disease in a manner similar to organic substances. This is entirely due to temperature changes, in both cases, when the structure assumes a different form under the stress of temperature.

CHARLES AMOS & CO'S GRILLS.

The etching here shown illustrates one of the art metal products made by Charles Amos & Company, Detroit, Mich. They make a specialty of decorative work in the baser metals for all classes of buildings, public and private, and carry out original designs of architects for fences, mausoleum doors, elevator enclosures, bank railings, garden

furniture, etc. At present they are working on metal window grills and balcony railings for two large public libraries in Texas and a government building in Oregon. Builders and dealers in this class of work should put themselves in correspondence with this firm, when contemplating its purchase.

NEW SMELTERS.

There are prospects of several new smelters being erected in the Temiskaming mining region soon. The Montreal Reduction & Smelting Company have purchased a site near North Bay, and will shortly apply to the Temiskaming & Northern Ontario Railway Commission for a siding. An Arizona firm have also expressed their intention of putting up smelting works at Cobalt.

IRON FENCE CONTRACT.

The City of Halifax council asked figures for an iron fence for their public gardens. Five tenders were received as follows: Austen Bros.; Expanded Metal Co., Toronto; Canada Foundry Co.; M. E. Keefe, and MacDonald & Co. The tender of the Canada Foundry Co., at $9,000 for the fence and main entrance archway and side gates, was recommended to the council for acceptance.

AN AMALGAMATION.

A commercial transaction of considerable importance to Chatham was agreed upon on Saturday, when committees of the managing boards of the Defiance Iron Works, Chatham, and the Toronto Gas & Gasoline Engine Company, agreed to amalgamate with a capital of $500,000, each branch to continue its own local business. The Toronto concern will make the main parts of the engines at present made by both companies, while the Chatham company will make the castings, etc. The anticipated change will result in the Chatham branch of the new company being considerably enlarged with the additional employment of from 100 to 200 men.

LARGE DEMAND FOR BOLTS.

There is great difficulty experienced in getting bolts and nuts just now. Factories are rushed to their fullest extent and have contracts for months ahead. The demand has become so large that firms who have heretofore depended upon Canadian manufacturers for their supply now find it impossible to make contracts for anything like early delivery, and have had to place contracts with British firms. All this, of course, tends to firm up prices, and it would not be surprising to see a further advance before long.

U. S. STEEL TO UTILIZE WASTE.

Officials of the United States Steel Corporation are forming a number of concerns subsidiary to the new Indiana Steel Co., at Gary, Ind. One of these that has taken form during the last week is to be known as the Universal Portland Cement Co., with a capital of $1,000,000. Its plans are understood to contemplate the manufacture of a slag cement out of the furnace slag coming from the new blast furnaces to be built at Gary. The United States Steel Corporation has spent annually millions of dollars to dispose of its waste slag from blast furnaces and is now having no little difficulty in getting rid of this material. In the mills and furnaces of the Illinois Steel Co. there has been established a cement department which has been running with more or less success, but it has been hindered by the difficulty of eliminating sulphur from the slag.

Recently, it is said, the steel corporation has come into possession of processes that will eliminate sulphur during the process of making the cement. This will give the corporation a practical cement for all purposes with only the base cost of making it. The saving will be enormous, as there is no investment for cement deposits nor for the machinery that is necessary for the manufacture of ordinary rock cement.

BUILDING AND INDUSTRIAL NEWS

HARDWARE AND METAL would be pleased to receive from any authoritative source building and industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories, foundries or other works, railway or mining news. All correspondence will be treated as confidential when desired.

The C.P.R. will build a hotel at Blue Sea Lake, Quebec.

Three hundred houses are under construction in Berlin.

Vancouver is now the fifth city in Canada in bank clearings.

L. R. Rix will build a two-storey block at Wetaskiwin, Alta.

The Miramichi Lumber Company will erect mills at Chatham, N.B.

The City of Toronto asks for tenders for equipment for street gas lamps.

McPhee & Mahoney will add two storeys to the Norrish Block, Guelph.

A. Rhodes and W. A. Fillmore will build a business block at Truro, N.S.

Merriton, Ont., advertises special inducements to industries locating there.

The Town of Steelton, Ont., asks for tenders for installing a water works system.

The Calgary Milling Co. will erect a 1,000-barrel mill at Calgary, to cost $22,000.

The Goderich Lumber Company will rebuild their saw mill, which was destroyed by fire.

A. J. Marshall, of Ottawa, has the contract for the Iberville, Que., post office, at $8,000.

The Frontenac Gas Co. have acquired land in Quebec City for the erection of a large gas plant.

The Harmsworth pulp mills at Grand Falls, Newfoundland, were destroyed by fire. Loss $30,000.

J. P. Hall and E. C. Perry, two Americans, will establish a soap factory at Saskatoon, Sask.

A. C. Lawson will build a two-storey building at Cartwright, Man., to be used as a hardware store.

The Royal Bank have purchased 50 feet on King street east, Toronto, upon which they will build.

The estate of Tanner Bros., Waubaushene, Ont., asks tenders for timber limits on Georgian Bay.

W. J. Halliday, of Toronto, will engage in the manufacture of special leather at Gananoque, Ont.

The Calgary Pressed Brick & Sand Stone Company expect to be turning out pressed brick in a few days.

The Indestructible Fibre Co., of Massena, New York, will establish a mill on Victoria Island, Ottawa.

The Canada Plate Glass Co. will erect a glass bending factory on Ashbridge's Bay land, Toronto.

Battleford, Sask., citizens will vote on a by-law to expend $30,000 for installing a water works system.

The Dominion Henderson Bearings are seeking a location upon which to build. Toronto Junction is being considered.

The Cartwright, Man., Farmers' Elevator Company have declared a dividend of 20 per cent. on the year's operations.

Randall & Greenshaw, Shoal Lake, Man., ask the municipality for a loan of $15,000 to build a grist mill and elevator.

Waller & Mackenzie, Winnipeg, have the contract for laying Carman's sewer and water mains. The water mains will be of wood.

McKenzie & Mann, it is said, will extend a branch from the Great Northern to St. Leon Springs, Que., and will build a hotel there.

Saskatoon, Sask., ratepayers voted $250,000 for public works. Sewerage, water works, power and lighting systems will receive the amount.

L. D. Robertson, and others, of Montreal, composing the Monarch Motor Co., will go into the manufacture of automobiles. Their capital is $250,000.

The fire in the Dominion Steel Co's rail mill at Sydney did not interfere with the output, and a special message stated that the mill was going full blast as usual.

The Lloyd-Thompson Company, of Toronto, are negotiating with the Town of Strathroy with a view to locating there to manufacture spring beds, baby carriages, etc.

The Toronto Construction Company have been awarded the contract for the Georgian Bay branch of the C. P. R., which is to run from Victoria Harbor to Peterborough.

Allith Mfg. Co. has been incorporated under Ontario charter with a capital stock of $40,000, for the purpose of manufacturing door hangers, hardware specialties, etc. The provisional directors are J. D. Spence, G. A. Walker and J. F. McKee, with head office at Hamilton.

Cecil B. Smith has been engaged to superintend the construction of the Winnipeg civic power plant at a salary of $10,000 for two and a half years. He will be allowed to act as consulting engineer of the Ontario Power Commission for a period not exceeding three weeks each year.

Revillon Bros. of Edmonton have given an order for 15,000 barrels of cement, which is to be used in the construction of the $200,000 trunk sewer and represents a cash value of some $70,000. The shipment will constitute seven complete train loads of over 150 freight cars.

The British Columbia Marine Railway Co., of Esquimalt, has been given the contract by the Dominion Government for the hydrographic steamer to be used on the Pacific. The price is $143,000. The Victoria Machinery Co. tendered at $191,000 and the Polson Iron Works at $202,000.

New Idea Buckle Co. has been incorporated under Ontario charter with a capital of $60,000, for the purpose of manufacturing all kinds of buckles and lines of hardware. The provisional directors are T. J. McKeown, H. Siemens, B. R. Hawley, R. S. Beaver and Rhoda B. Hall, with head office in Toronto.

The Canada West Coke & Coal Company have been incorporated under Dominion charter with a capital stock of $2,000,000 for the purpose of mining and dealing in coal, oil and metals. The provisional directors are J. S. Hough, A. C. Ferguson, Chas. Williams, Max Finklestein and W. M. Graham, with chief place of business at Winnipeg.

The Desmarteau Plumbers' Supply Company have been incorporated under Dominion charter with a capital stock of $195,000 for the purpose of manufacturing and dealing in plumbers', tinsmiths' and ironmongers' supplies. The provisional directors are J. A. Desmarteau, H. Hebert, P. Bilaudeau, H. Hamel and J. B. Robert, with chief place of business at Montreal.

McLennan, McFeely & Co., of Vancouver have let the contract for a four-storey warehouse to John McLuckie. Work will be commenced at once so that the building may be finished this Fall. Everything will be of the most substantial construction on account of the heavy stocks of wire cable, chain and heavy hardware it will contain. The building will have three electro-hydraulic elevators, and in addition to the wholesale warerooms will have a retail department.

BUILDING NOTES.

Montreal will have a new fire hall.

Peterborough will build a new hospital.

Edmonton issued $83,595 in building permits last week.

The Bell Telephone Co. will erect a building at Calgary.

Stratford building permits for July amounted to $40,000.

E. J. Rodd will erect a two-storey machine shop in London.

Gourlay, Winter & Leeming will build a piano factory in Toronto.

H. B. Dawson, of Fort William, will build a business block there.

The Ontario Bank will build an addition to their branch at Port Arthur.

The Simpson avenue Methodists, Toronto, will build a $33,000 church.

The Royal Bank of Canada will build a branch at Vancouver, to cost $50,000.

The Consumers' Gas Co. will erect a brick coal shed in Toronto to cost $70,000.

The Centennial Methodist Congregation, Toronto, will build a $40,000 church.

J. E. Wright, of Midale, Sask., is erecting a building to be used as a hardware store.

The British Columbia Electric Railway Co. will build a branch sub-station at Ladnor, B.C.

The Hamilton & Brantford Electric Railway Co. have contracted with the Dominion Steel Co. for steel rails to be used from Hamilton to Brantford. The contract amounts to $60,000. Eighty-pound rails will be used.

PAINT, OIL AND BRUSH TRADES

PAINT MANUFACTURERS PROBLEMS

Paint manufacturers who distribute their goods in all parts of Canada have some peculiarly difficult problems to solve in order to maintain a high reputation for their product wherever sold. In such a rapidly growing country four sources of trouble, perhaps, stand forth pre-eminently to worry the manufacturers.

Unseasoned Lumber.

"In order of merit," to use an expression of our school days, they might be mentioned as: Break-neck haste in erecting buildings and consequent use of unseasoned lumber; climatic conditions which vary in different sections of the country, especially with regard to the dampness of the atmosphere; the ignorance of the retail dealer who is not sufficiently versed in the paint business to intelligently advise his customers; and the parsimony of consumers, who despise the painter's art and are satisfied with their own efforts.

Cheap Paints.

There is scarcely a city in Canada where outskirts will not furnish examples of the first class mentioned. Land is here bought up largely by speculative companies who hastily construct a number of residences, set out some trees, give the locality a euphonious name, and then invite the public to visit the land offices and buy their own homes "on easy terms." The residences are generally painted with cheap materials and in flashy colors. But even the very best paint could not stick on such a surface. It must be borne in mind that, unless thoroughly seasoned, lumber will, after a short time, begin to exude its natural juices, which will be sure to start the paint peeling off. Knots, also, should receive more careful treatment than is generally given them, a copious application of good shellac being absolutely necessary. So a paint should not be judged by the poor lasting qualities it displays on a house which is constructed in this precipitous manner.

Meet Atmospheric Conditions.

Upon the condition of the atmosphere depends to a great extent the appearance and durability of the coat. For instance, paint should not be applied when the air is humid and muggy, as it will take too long to dry. In this connection great difficulty is often experienced with floor paints. Now, all reputable paint manufacturers make a floor paint which, under normal conditions, will certainly dry hard in eight hours. But there are "zones" or districts in many parts of Canada from which complaints are frequently received that the paints do not dry even in a much longer time than that. This is generally due to the moisture of the atmosphere, and is especially marked in the territory between Kingston and the Atlantic Ocean. But it may also happen from the fact that many families after painting their floors close the kitchen door to keep the smell of paint from the other rooms. Of course the circulation of air is stopped by this action, and the drying process in indefinitely prolonged. It would be far better to endure these discomforts for a few hours and give the paint a good chance to dry, and it behooves the hardwareman to educate his customers in the proper method of using the paints.

From Kingston to the Sea.

Some years ago one of the leading paint manufacturing firms in Canada received a large number of complaints that the floor paints would not dry in the time specified. It was found on investigation that the district between Kingston and the ocean would just about cover all these complaints, owing to the dampness of the atmosphere along the St. Lawrence. Consequently, great efforts were made to discover a drier which would do the work in all districts, and a formula which has been satisfactory was finally secured.

Retailers Should Know Paints.

That retailers do not give sufficient attention to the study of pigments and paint manufacture is unfortunate. In many cases their customers are either ignorant of the class of material they require or have an entirely wrong idea on the subject. If retailers knew the relative value of the commoner pigments, and something about the oils and hardeners which are used in making paints, they would be able to give ideas to their customers or correct erroneous ones. And it would take very little time and effort to acquire a working knowledge along these lines, as manufacturers will always be found willing to impart information.

A Gardener Who Painted.

It is a common impression that anybody at all can wield a paint brush, and there are many property owners who are satisfied to entrust the painting of valuable buildings to unskilled hands, not infrequently doing it themselves. A few years ago a gentleman residing in the neighborhood of Hamilton wished to paint his house, and as he knew the manager of a manufacturer's Toronto branch he called on him for advice. The latter carefully chose the best material for the purpose and felt that he could guarantee satisfactory results. Before a year had passed, however, a stinging rebuke came from the owner of the house, who reported that the paint was gradually peeling all over the building.

The manager was at a loss to know how to explain this failure. He knew that the paint was good, so, in order to get at the bottom of the trouble he sent an expert up to view the job. It didn't take long to discover what was wrong. The expert ran his knife under the paint, and a heavy slab peeled off readily. On examining it he found that he could even separate the three different coats which had been applied. The first coat had been altogether too thick and, apparently, no effort had been made to rub it into the wood. Yet it was expected to take hold and stick where there was nothing on which a hold could be taken.

"Who did the painting for you?" asked the expert.

"Oh, my gardener was not very busy," was the answer, "so I got him to do the job."

"Would you expect a painter to lay out your garden as well as the gardener?" was the next question, and a reluctant "No," was the only reply. The owner had saved a few dollars on the labor of painting the house, but——.

A GLASS BENDING FACTORY.

The Canada Plate Glass Company will build a glass bending establishment near Ashbridge's Bay, Toronto. The industry, which is new for Canada, will commence at once. Machinery for the plant has been purchased.

THE ADULTERATION OF WHITE LEAD.

The members of the White Lead Association of Canada, which was formed in 1890, alone have the right to use the yellow label with the red seal, which is a guarantee of purity. These labels are issued by the secretary of the association, John Hyde, who records where the labels, which are numbered, are to be used. The efforts of the association have resulted in having an Act passed by the Dominion Parliament making it illegal to use the word "pure" if the lead is not really so, and imposing a fine of $100 for every violation of the code. The schedule of what pure white lead must be is as follows:

Dry White Lead.—Basic carbonate of lead prepared only by corrosion of metallic lead.

White Lead in Oil.—Dry white lead ground in pure linseed oil in the proportion of 90 to 92 per cent. of the former to 8 to 10 per cent. of the latter.

Buyers of white lead, if they doubt the purity of a parcel, can send a sample to the public analyst at Ottawa to be analyzed free of charge. If adulteration is found, the association takes up the prosecution under the Act. The label above referred to can be used only by members of the association.

NEW OIL REFINERY.

The British American Oil Co., who have a new system of refining oil, have leased three acres of Ashbridge's land, Toronto, upon which they will erect a refinery.

PAINT AND OIL MARKETS

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, August 3, 1906.

There has been very little new occurred in paints and oils during the week. Business generally has been very good while prices in most cases have been steadily maintained. Benzine has experienced considerable of a decline, but this was the only price change which occurred. There has been no material change in the turpentine situation, while gasoline presents no new features.

It is thought probable that shellac varnish will advance shortly, but at present the prices are steady.

LINSEED OIL—There is no change in the situation this week and we are quoting: Raw, 1 to 4 barrels, 52c.; 5 to 9 barrels, 51c.; boiled, 1 to 4 barrels, 55c.; 5 to 9 barrels, 54c.

TURPENTINE— There has been no material change in the market since last week. Consequently we are quoting: Single barrels, 86c. per gallon; two barrels or over, 85c. per gal.; for smaller quantities than barrels, 5c. extra per gal. is charged. Standard gallon is 8.40 lbs., f.o.b. point of shipment, net 30 days.

GROUND WHITE LEAD—We quote: Best brand Government standards, $6 to $6.25; No. 1, $5.65 to $5.90; No. 2, $5.30 to $5.65; No. 3, $5.05 to $5.30, all f.o.b. Montreal.

DRY WHITE ZINC— The market remains unchanged at following prices: Red seal, 7c. to 8c.; French V.M., 6c. to 7c.; Lehigh, 5c. to 6c.

WHITE ZINC (ground in oil) — We quote: Pure, 8c. to 9c.; No. 1, 6½c. to 7½c.; No. 2, 5¼c. to 6¼c.

PUTTY—Our quotations are: Pure linseed oil, $1.75 to $1.85; bulk in barrels, $1.50; in 2-lb. irons, $1.80; in tins, $1.90; bladdered putty in barrels, $1.75.

ORANGE MINERAL—We quote as follows: Casks, 7¼c.; 100-lb. kegs, 7½c.; smaller quantities, 8½c.

RED LEAD—There is nothing new this week. Prices still remain as follows: Genuine red lead in casks, $6; in 100-lb. kegs, $6.25; in less quantities at the rate of $7 per 100 lbs.; No. 1 red lead, casks, $5.75; kegs, $6, and smaller quantities, $6.75.

GUM SHELLAC—No further change has occurred and we are quoting as follows: Fine orange, 60c. per lb.; med. orange, 55c. per lb.; bleached shellac (white) 65c. per lb.

SHELLAC VARNISH — We quote: Pure white, $2.90 to $2.95; pure orange, $2.70 to $2.75; No. 1 orange, $2.50 to $2.55.

MIXED PAINTS—Prices range from $1.20 to $1.40 per gallon.

CASTOR OIL—Nothing new is reported in this market. We still quote: Firsts in cases, 8½c.; in barrels, 8c.; seconds in cases, 8c.; in barrels, 7½c.

REFINED PETROLEUM — We quote as follows: American water white, 17c.; Canadian prime white, 15½c.; astral, 20c., ex warehouse.

GASOLINE—The ruling quotation at present is 24c. in bbls.

BENZINE—A decline has occurred and we are now quoting 20 1-4c. in bbls.

WINDOW GLASS—We quote: First break, 50 feet, $1.85; second break, 50 feet, $1.95; first break, 100 feet, $3.50; second break, 100 feet, $3.95; third break, 100 feet, $4.25; fourth break, 100 feet, $4.50; fifth break, 100 feet, $4.75; sixth break, 100 feet, $5.25; seventh break, 100 feet, $5.75; eighth break, 100 feet, $6. Diamond star, first break, 50 feet, $2.05; second break, 50 feet, $2.25; first break, 100 feet, $3.90; second break, 100 feet, $4.30; third break, 100 feet, $5.25; fourth break, 100 feet, $6; fifth break, 100 feet, $7; sixth break 100 feet, $7.50; seventh break, 100 feet, $8.50. Double thick, first break, 50 feet, $3.20; second break, 50 feet, $3.50; first break, 100 feet, $6.25; second break, 100 feet, $6.50; third break, 100 feet, $8.25; fourth break, 100 feet, $9.50; fifth break, 100 feet, $11; sixth break, 100 feet, $12; seventh break, 100 feet, $13.50; eighth break, 100 feet, $16; ninth break, 100 feet, $17.50; tenth break, 100 feet, $19.50; eleventh break, 100 feet, $23.50; twelfth break, 100 feet, $28.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East.
Toronto, Aug. 3, 1896

Linseed oil is firmer in England at present and prices there have been advanced a half penny. Canadian prices, however, remain the same.

There is no change in turpentine. Present quotations are firm and not likely to go any lower.

Business generally keeps up well, a large quantity of ready mixed and dry colors being sold.

WHITE LEAD — Ex Toronto, pure white, $6.30; No. 1, $5.92½; No. 2, $5.55; No. 3, $5.30; No. 4, $5.05 in packages of 25 pounds and upwards; ½c. per pound extra will be charged for 12½ pound packages; genuine dry white lead, in casks, $5.40.

RED LEAD—Genuine in casks of 500 lbs., $5.75; ditto, in kegs of 100 lbs., $6.60; No. 1 in casks of 500 lbs., $5.50; ditto, in kegs of 100 lbs., $5.75.

DRY WHITE ZINC—In casks, 7c.; in 100 lbs., 7½c.; No. 1, in casks, 6c.; in 100 lbs., 6½c.

WHITE ZINC (ground in oil)—In 25-lb. irons, 8c.; in 12½ lbs., 8½c.

SHINGLE STAIN—In 5-gallon lots, 75c. to 90c. per gallon.

PARIS WHITE—90c. to $1 per 100 lbs.

WHITING—60c. to $1 per 100 lbs. Gilders' whiting, 75c.

PARIS GREEN — Canadian Government standard, 600-lb. barrels, 19¼c.; 25-lb. drums, 20½c.; 1-lb. packages, 21c.; ½-lb. packages, 23c.

SHELLAC VARNISH—Pure orange in barrels, $2.80; white, $2.90 per barrel; No. 1 (orange) $2.25.

LINSEED OIL—Our quotations are: Raw, 1 to 4 barrels, 54c.; 5 to 9 barrels, 52c.; boiled, 1 to 4 barrels, 57c.; 5 to 9 barrels, 55c. Toronto, Hamilton, London and Guelph; net 30 days. Advance of 2c. for delivery to outside points.

TURPENTINE—Single barrels, 85c.; 2 to 4 barrels, 84c., f.o.b. point of shipment, net 30 days. Less than barrels, 90c. per gallon.

GLUES—Broken sheet, in 200-lb. barrels, 5 to 25c. per lb.; cabinet glue, in barrels, 11½c. to 12c.; emery glue, in barrels, 15c.; bookbinders' ground, 11½c; finest American white, 19c. per lb.; No. 1 American white, 15c. per lb.

PUTTY—Ordinary, bladders in barrels, $1.80; pure linseed oil, $2 to $2.10; bulk, in 800-lb. casks, $1.50; pure, $1.95 to $2; 100-lb. kegs, 25c. extra.

LIQUID PAINTS—Pure, $1.20 to $1.35 per gallon; No. 1, $1.10 per gal.

BARN PAINTS—70c. to 80c.

BRIDGE PAINTS—75c. to $1.

CASTOR OIL—English, in cases, 9½c. to 10c. per lb., and 11c. for single tins.

REFINED PETROLEUM—Trade continues normal. We quote: Canadian prime white, 14c.; water white, 16c.; American water white, 16c. to 18c. ex warehouse.

CRUDE PETROLEUM — We quote: Canadian, $1.38; Pennsylvania, $1.64; Ohio, 98c.

SHERWIN-WILLIAMS IN WINNIPEG

Contracts are about to be let by the Sherwin-Williams Co. for the erection of a four-storey paint factory and warehouse in Winnipeg. It is expected that the work will be completed by the Fall. C. C. Ballantyne was in Winnipeg recently, accompanied by Mr. Martin, of the Sherwin-Williams Co., in connection with the purchasing of a site for the building. The situation of the site has not yet been made public, but it is understood that more property than is at present required has been secured, as the company's business in Canada is attaining such proportions that room for further expansion will be required in the future.

HAMILTON STEEL CO. PICNIC.

The employes of the Hamilton Steel Co., Hamilton, Ont., with their families and friends, held a picnic at Island Park, Toronto, last Saturday.

PLUMBING AND STEAMFITTING

SOME DETAILS IN RUNNING PIPES

By J. M. Robb, of Peoria, Ill.

Michael Angelo said: "Trifles constitute perfection, but perfection is no trifle." When it is remembered that Michael Angelo built one of the aqueducts supplying Rome with water, the application of the above quotation to the work of running pipes is not so much out of place as it seems at first sight.

Apparently the paint, cement, pipe joint grease, dope, or whatever else it may be called, which is used on the threads of screwed pipe is one of the smallest trifles to be considered in running pipes, yet a hastily compiled list of some of the many troubles resulting from the careless use of paint brush or stick by plumbers and pipe-fitters will convince the most skeptical man in the business that this seemingly insignificant detail is well worth much more attention than it has ever received.

The master plumber who will keep a careful list of his repair expense on new work just installed will find that no small portion of this deduction from his profits is due to bits of hardened paint sticking in cocks, faucets and valves, causing them to leak.

Even though this expense were not worth saving, a little reflection concerning the thoughts of the proud possessor of an otherwise satisfactory plumbing job, when, every time he uses a basin or tub, for weeks after the work is left completed he must fish out the bits of paint that flow in with the water will show the man who prides himself on careful work how important this little detail really is.

Accumulations of paint used in making joints have been known entirely to stop the circulation of portions of hot water heating systems, fine plumbing fixtures have been almost ruined by the scouring necessary to remove stains from paint vomited from the water piping and then baked on by the hot water; and the complaint records of every gas company in the land show complaint after complaint of poor gas, caused solely by the too free use of the paint brush by the gasfitter and fixture hanger.

Enough has been said to justify the attention requested for this trifle in the work of running pipes.

It is here proper to consider the real value of the practice of using paint on the threads of screw-pipe and to throw all the light possible on the subject, the following articles by R. T. Crane are given:

"I am satisfied that the trade generally do not understand the conditions that are necessary in order to make good work in this line.

"If the ordinary steamfitter were called upon to put up piping that should stand 200 or 300 pounds of steam pressure, I think he would feel that he was taking a very large responsibility, and if he were called upon to do a job that should stand 1,000 pounds of air pressure, he would not feel like taking this responsibility, and anyone taking this responsibility would feel that he was obliged to resort to very extraordinary means in order to accomplish such a result; and if called upon to do such work with the ordinary material that is manufactured and supplied in the general market he would say that it was an impossibility to do it.

"We, however, not long ago had occasion to make joints tight in an 8-inch line so that they would stand 1,000 pounds of air pressure, and this we accompanied with the regular weight of line pipe and a coupling weighing about twenty-four pounds (which is the weight of a first-class line pipe coupling). The result of the experiment on thirty-two joints was that on the first test all were tight excepting one, and when this one joint was taken apart and again made up it also proved tight.

"The secret in making such a joint is to overcome the friction in screwing the pipe together.

"Friction is due to the large amount of surface, especially when the joints are coming up close to a bearing. Any grit or gummy material in the joint also tends very largely to produce friction. Friction produces expansion, and as the pipe is lighter than the coupling, it expands more than the coupling, and then when both again become cool the pipe shrinks more than the coupling, thus causing a tendency to leak.

"It is, of course, evident to anyone who has given any thought whatever to this subject, that in order to make tight such joints as are mentioned above, the iron must be brought together as solidly as possible.

"To get such results it is imperatively necessasry that the iron should be absolutely clean, and then it is essential that the very best lubricant is used in order to reduce the friction. I would also add that we have discovered that, in order to produce good joints, it is necessary that the threads should be absolutely perfect, nor is a taper essential (one of the couplings in the experiment herein referred to had no taper at all, and others very little taper), nor is a large amount of bearing necessary; in fact, we made one joint with a thread reduced to three-fourths of an inch in width, and this joint was tight at 1,500 pounds of hydraulic pressure, which proves that the bearing was not essential to the making of a tight joint, and that the length of thread was not esential to prevent stripping of the thread from the coupling or the pipe.

"This, I think, also proves another point that is not understood, and that is that it is not essential in order to do good work, to have especially long threads.

"In fact, we are satisfied that especially long threads are a detriment in making a good joint, for it stands to reason that such long threads tend to produe friction, which prevents the iron from coming up closely together, and the irregularity of the thread on the pipe tends to prevent the iron coming up in the closest contact. This will be better understood if we go to a great extreme in the matter. For instance, should we undertake to make a joint on 8-inch pipe, with a thread six inches long, the irregularities and friction would be so great that it would be impossible to get this thread contact.

"We would say, in connection with the tests referred to herein, that we cut a dovetailed recess in the end of some of the couplings and undertook to demonstrate whether defective joints could be tightened with lead caulked in such recess, and while we did not go far in the number of these experiments, we did find in two experiments (all that we made) that we could tighten a defective joint in this manner."

Broken Threads.

"Another cause of rejection of material is where the threads have been broken off a little. Probably not so much as 1 per cent. of the whole bearing of the thread is gone, yet some wise (?) steamfitters will throw out this material. This is also an absurd theory, there being a large factor of strength in the length of all threads, as we know from tests that we made some time ago with an 8-inch coupling. We cut away all the thread excepting three-eighths of an inch, thereby leaving only about one-fifth of the ordinary bearing of that size thread, after which it was put under a pressure of 1,000 pounds without a leak.

"It is no doubt the common practice of steamfitters and engineers to reject threads where only 1 per cent. are broken. The utter absurdity of this is shown by the above test, wherein about 80 per cent. of the strength of the thread has been taken away.

"For the purpose of illustrating these erroneous ideas we took an 8-inch coupling and a piece of 8-inch pipe, and throughout the whole length of the bearing of the thread in the coupling and on the pipe we made grooves, such

as are likely to occur when there is a defective weld. The grooves extended about half the depth of the thread and were made an inch apart for the entire circumference of the pipe. Then we flattened all the threads, both on the pipe and in the coupling, excepting a mere speck on each; also to offset the broken thread feature of this question we cut three grooves in the pipe one-fourth of an inch wide and the full depth of the thread. This coupling and piece of pipe were then screwed together and tested to 500 pounds of air, at which pressure the joint was tight, demonstrating conclusively the stupidity of steamfitters and engineers on this subject, as claimed in the beginning of this article. The amount of defect in the threads used in this test was at least 100 per cent. greater than that for which the regular steamfitter or engineer will reject material."

Both of the foregoing articles bear directly on the use of paint in making up joints in screwed pipe and conclusively point out that the real value of paint for such use is as a lubricant, not as a cement.

The writer has many times in his own work remedied bad leaks merely by unscrewing the joints and making them up again, using only a little oil on the threads the second time.

He has further noted that the least trouble from leaks has been experienced on work where the fittings were first screwed up tight, then taken off, the threads slightly oiled and then made up tight. Viewed in consideration of the foregoing the indiscriminate use of the paint brush by most plumbers and pipe fitters is a very useless and pernicious practice. It probably is a result of the imperfect tools used in the early days of pipefitting. Then a cement was necessary to secure tight joints.

With the excellent tools and fittings generally furnished to-day there is no necessity for cementing screwed joints.

The high pressure now generally used in piping of all sorts makes an iron to iron contact imperative for tight points.

Assuming that the threads themselves are reasonably perfect, the two principal essentials for tight work are that all the threads be thoroughly cleaned and that just enough of a good lubricant be used to overcome the friction of the threads when they are screwed up to a bearing.

Reaming Burrs from Cut Pipe.

Another most important trifle which receives little or no attention in running pipe is the burr left inside the pipe by the cutting-off tool.

Every text book relating to the flow of liquids through pipes dwells insistently upon the importance of maintaining a smooth bore.

A pipe is no larger than its smallest inside diameter, and how often are pipes placed in position with their carrying capacity reduced 50 per cent. by the burr which the thoughtless fitter will not take the trouble to ream out.

A good, sharp reamer should be one of the most important tools in every pipe fitter's kit and it should be used every time a pipe is threaded. It takes time and work to do this, but it is only attention to the little things which marks the difference between the careful and the slovenly workman.

Securing Piping in Place.

A glance at any job of piping will tell whether the man who erected it possessed any mechanical ability. There are so many good hangers that can be easily obtained or made that there is little or no excuse for the carelessness so often shown in supporting lines of pipe. With some plumbers and pipefitters anything in the shape of a hanger seems to go, and in some instances so few hangers are used that the lines of pipe are almost without visible means of support, the erector's sole idea seeming to be to get his pipe into place as quickly as possible without any thought of permanency. It makes little difference what sort of hanger is used if they are placed closely enough together to prevent the pipes from sagging, but for neat work but one style of hanger should be used on the same job.

The tinned strap is perhaps the hanger most generally used. It does very well when the walls to which the pipes are secured are not to be finished.

A hanger made like a wire nail, of wire bent U-shaped and having both ends bent and pointed for driving into the floor joists makes an excellent hanger where pipes are to be suspended from joists. Such a hanger is quickly put up, makes a neat finish, and is especially useful when the pipes must be graded.

Very often hangers are made of strap iron of a weight to correspond to the size of the pipe to be supported. If the pipe is carried close to the joists or ceiling the iron is merely bent around the pipe and the ends securely nailed. When the pipe is some distance from the ceiling one end of the strap iron is looped around the pipe and riveted or bolted into place with a stove bolt, while the other end is screwed, bolted or nailed to the ceiling or joists.

Frequently hangers for the larger sizes of pipes are made of chain run through screw eyes in the ceiling or joists and the ends secured with S hooks, stove bolts or split links.

When the pipes must be rigidly secured the hangers are forged from iron of the necessary weight and then bolted into place.

When many pipes are run together, cast, wrought or malleable ring or hook plates may be used to good advantage.

When pipes are run on finished walls or ceilings the use of ring plates makes the best finish, since they hold the pipes clear of the walls or ceiling, permitting both pipes and walls to be more easily painted or otherwise finished and at the same time preventing the accumulation of dirt behind the pipes.

Under some conditions a board hanger can be advantageously used. Holes of the proper size are bored in a board of the required dimensions; the board is screwed or nailed in position and the pipes are run through the holes. Long vertical pipes run in partitions can be easily held in place by board hangers nailed to the partition studs.

Whenever in roughing work studs are left for fixtures, their locations should be exactly laid off and the nipples held securely into place, so that it will be impossible for carpenters, lathers, plasterers or other mechanics to move them. The painstaking plumber and pipefitter will find in the feeling of satisfaction which always results from work well done an ample return for the small additional exertion required to give lines of pipe a solid, substantial appearance that betokens careful work.

Symmetrical Arrangement of Piping.

Every job of piping should be carefully planned by the man who installs it.

The time is past when a plumber can spend days in building an elaborate work-board to adorn the wall over a kitchen sink.

On the other hand, while economy of both time and material must be studied, a good job of piping will never appear as though the man who erected it simply tried to make each run of pipe the shortest possible distance between the points of supply and delivery without any regard for other conditions.

There is the same opportunity to display art in running pipes that exists in performing any other work and the principal essentials of this art are simplicity and uniformity. Lines of the pipe should, as a rule, always be run parallel to the building walls. When conditions make necessary an exception to this rule 45 degree elbows should be used if possible.

Parallel lines of pipe should always be run on the same level or plane.

Branches also should always be run on the same plane or level. This is easily arranged by taking the branches out of ells or 45 degree ells screwed into the tees in the main lines, making the branches either above or below the main lines.

Valves and cocks in parallel lines should always be lined up; likewise hangers, unions and other fittings. Uniformity should be the constant study of the man erecting pipe work. The symmetrical arrangement of piping stamps the man putting it up as a master of his trade.

Floor Plates, Wall and Ceiling Plates.

The use of floor, wall and ceiling plates is another trifle plumbers and pipefitters very often neglect. No job of piping in finished rooms where these plates are omitted can be called complete.

Of the many different types of floor, wall and ceiling plates, the solid cast iron plate, with a set screw for gripping the pipe, seems the best to use. It requires more thought when running the pipes in order to set them in the proper locations, but once set they are permanently in place.

Plates of the split type very often work loose and are lost. The thin nickeled plates are easily damaged and on this account soon mar the appearance of the piping. Again, in finished rooms the nickel plates emphaize the pipes

from the contrast they make, where the cast iron plates finished like the pipes produce a more harmonious effect.

The average plumber and pipe fitter very seldom thinks of using thimbles where pipes pass through masonry or plastered walls. Where there is much jar or vibration the use of thimbles is a necessity to prevent constant working away of the cement, plaster or mortar. Very frequently, also, the holes through which the pipes are run are never cemented up. This seems a very little thing. Yet the over-running of many a house by mice or other vermin can be traced directly to this one cause.

Certainly if this point with the other little things connected with plumbing work received its proper share of attention there would be fewer complaints of the havoc wrought by plumbers when installing their work.

VENTILATION OF SMALL BUILDINGS

I know of no subject of so much importance which is surrounded by so much ignorance or so many perplexities, difficulties and blunders as ventilation, writes R. T. Crane in the Valve World. While, as I have said this is an exceedingly complex and difficult subject to handle, in a great many cases the ignorance displayed in regard to it is inexcusable. As an illustration, not one person in a thousand has sense enough to use any discretion in opening a window. People will open a window wide, thereby causing an objectionable draught, and the next moment will close it down, cutting off the air entirely, not having sense enough to graduate the opening to a point where they could get the necessary ventilation without creating a disagreeable draught.

One of the favorite methods of trying to change the air of in a room that is practiced by many people who imagine themselves to be particularly wise on this subject, is to open a window at both top and bottom, in the belief that the air will come in at the bottom and go out at the top. It is, of course, true that when there is warmth in a room, and no wind or flue to counteract the motion of the air through the window, this action will take place, but the great trouble with this plan is that such conditions are rarely found. When there is no warmth in the room there will be no action of this kind, and when there is any considerable amount of air moving either against the window or from opposite directions which affects the room, then the air will either come in or go out at both top and bottom.

If there were a flue in the room and the weather cool, the effect would be to draw in air at both top and bottom of the window, and especially would this be the case if there were a number of flues around the house, as they would act on the air in this room, just the same as the flue in the room and make it so much more difficult to get the action desired.

It frequently happens that in a large room only one window will be opened, making it very disagreeable for those near that window, while by opening several windows slightly, and preferably at the top, the entire room might be ventilated without causing disagreeable draughts or inconveniencing any one.

In many cases people suffer considerable annoyance rather than refuse to listen to the outcry of some crank who can't, or thinks he can't, stand the slightest movement of air.

I have seen people so stupid as to stand close to an open window in a car and complain about it, instead of having sense enough to step to one side so as to get out or the draught.

The foregoing remarks concerning the necessity for this exercise of discretion in the opening of windows are, of course, intended to apply only to instances where rooms are occupied by a number of persons and draughts would be unpleasant or dangerous.

There are several devices on the market which are designed to be inserted in windows and which have for their object the scattering of the incoming air. Possibly the simplest and most effective way is to put a board in the window in such a way that the air is thrown upward and prevented from blowing directly onto the inmates of the room.

An Ignorant Official.

A number of years ago I visited one of our schools here with the mechanical superintendent, who had charge of the warming and ventilation of schools. This school was warmed by direct steam. When approaching the building this gentleman noticed that one of the windows was open, and on entering the school made a vigorous protest to the superintendent regarding the matter. The latter stated that he must have some way of obtaining fresh air, whereupon the mechanical superintendent said, "Why, there are your ventilating flues, what more do you want?" to which the superintendent replied, "They do not give us ventilation," which, of course, was the fact, as there was no means of supplying air to the room except by the windows, this man having sense enough to see that it does no good to have ventilating flues unless there is some means of supplying air to pass through them.

When the mechanical superintendent made his protest about opening windows I told him that if I had anything to do with the matter, instead of insisting that they should always be closed, I would make it a rule that they should never be closed, in a case of this kind, that is, where there was no way of obtaining ventilation except through the windows. I mention this incident for the reason that so many people seem to have the idea that in order to get ventilation all they have to do is to put in a flue. They do not realize that the flue will not act unless there is a supply of air coming into the room, and they also forget that air will not come into the room unless there is some force putting the air in motion.

Natural Ventilation.

Here is where the difficulties of ventilating arise, for what we call natural ventilation, that is, the natural action of flues in a house, is entirely determined by the temperature of the weather, or in other words, the flues only act when there is a difference in temperature between the air inside and the air outside the house. Hence when there is practically no difference in temperature, there is no action in the flues. This action is systematically increased by the increased difference between the temperature inside and that outside the room. There being in consequence no uniformity of action, ventilation depending merely upon the movement of air in flues is exceedingly irregular and unreliable.

Consequently the action of air in flues cannot be made effective when there is but little difference between the temperatur of the atmosphere inside and outside the room unless the flues are warmed or some mechanical means for moving the air is provided. But while there are methods of producing perfect ventilation, they are too expensive and complicated for all but the larger classes of buildings, so that it naturally follows that people for all time will have to depend very largely on the use of windows to secure ventilation. There would be very little difficulty about this matter if people would only reason it out and exercise a small amount of common sense in opening windows.

There are people who imagine they cannot get too much ventilation. For example, I know a man who at one time made a great splurge on the question of ventilation in private houses. He made a furnace flue of iron and surrounded it with a brick flue which had connections with all the rooms to facilitate ventilation. While there is some little merit in this plan in moderate weather, I know to a certainty that at other times it is absolutely unnecessary for a private house, as the ordinary fire-place will give really more ventilation than is required where warm air is being supplied through registers.

The same party that advocated this arrangement also advocated another absurd arrangement of having an open base board all around the room connected with this flue on the theory that you cannot systematically move the air in a room without taking it out at every part of the floor, which is another piece of absurdity. Any person who has given any attention to this subject knows that the air lies in exactly true horizontal strata of temperature from the floor to the ceiling and will fall if drawn off at the bottom or rise if drawn off at the top, in perfect uniformity.

AMERICAN FITTINGS.

Complaint is made in Vancouver that local plumbers have been importing fittings from an American foundry which are not up to the Canadian standard of weight required by the Health Department.

PLUMBING MARKETS

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, Aug. 3, 1906.

There has been no abatement in the amount of business passing in plumbing supplies. Much satisfaction is expressed on the excellent manner in which trade keeps up. Such a healthy trade as exists is quite unusual for this period of the year. Prices are very well maintained.

In iron pipe, conditions are unchanged. Less cutting is being done than formerly, prices being maintained in a most encouraging manner. Conditions at present are admitted to be more satisfactory than they were before, the cutting began.

Solder has experienced no change since last report. The market is steady.

RANGE BOILERS—Conditions are unchanged since our last report. We are still quoting following prices: Iron clad, 30 gal., $5 ; 40 gal., $6.50 net list ; copper, 40 gallon, $22.50 ; 35 gallon, $27 ; 40 gallon, $30.75 net.

LEAD PIPE—There is nothing new to report in lead pipe this week. Discount remain: 15 per cent., f.o.b. Montreal, Toronto, St. John, N.B., Halifax ; f.o.b., London, 15c. per hundred lbs. extra ; f.o.b. Hamilton, 10c. per hundred lbs. extra.

IRON PIPE FITTING— The usual amount of business is passing. No change has occurred in the market, quotations still being: Discounts on all sizes of nipples up to 6 inch, 67 1-2 to 70 per cent.

IRON PIPE—Conditions in the iron pipe market are much improved, and the feeling in the trade is quite encouraging. Prices remain as follows: Standard pipe in lots of 100 ft., regular lengths, 1-4 inch, $5.50 ; 3-8 inch, $5.50; 1-2 inch, $8.50 ; 3-4 inch, $11.50 ; 1 inch, $16.50 ; 1 1-4 inches, $22.50; 1 1-2 inches, $27 ; 2 inches, $36.50 ; discounts on black pipe, 1-4 inch, 62 per cent. ; 3-8 inch, 62 per cent. ; 1-2 inch, 71 1-2 per cent. ; 3-4 inch and upwards, 73 1-2 per cent. Discounts on galvanized pipe : 1-4 inch, 47 per cent. ; 3-8 inch, 47 per cent.; 1-2 inch, 61 1-2 per cent. ; 3-4 inch and upwards, 63 1-2 per cent. Extra heavy pipe of 100 feet lots are quoted as follows : 1-2 inch, $12 ; 3-4 inch, $15 ; 1 inch, $22 ; 1 1-4 inches, $30 ; 1 1-2 inches, $36 ; 2 inches, $50. The discount for black pipe is 71 per cent., and for galvanized, 61 per cent.

SOIL PIPE AND FITTINGS—There has been no change in the market situation. Good trade is being transacted at the old figures as follows: Standard soil pipe, 50 per cent. off list. Standard fittings, 50 and 10 per cent. off list ; medium and extra heavy soil pipe, 60 per cent. off. Fittings, 60 per cent. off.

SOLDER—The solder market is steady under the recent advances recorded in these columns. Our quotations are as follows: Bar solder, half-and-half, guaranteed, 23c. ; No. 2 wiping solder, 20c.

ENAMELWARE—Our prices remain as follows : Canadian bath tubs, plate E1, 5 feet, 1st quality, $20.65, special $18.65 ; plate E11 and E21, 5 feet, 1st quality, $19.50, special $17.15 ; plate E35, 5 feet, 1st quantity, $24.65, special $22.40. American baths, rolled rim, 5 feet 2 1-2 inch rim, $22.25 ; 3 inch rim, $29.25. Lavatories, discounts, 1st quality, 30 to 30 and 5 per cent. : special, 30 and 10 to 40 per cent. Sinks, 18 x 30 inch, flat rim, 1st quality, $2.60, special $2.45.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, Aug. 3, 1906.

There are no price changes in plumbing supplies this week, and no outstanding features. Business continues as brisk as ever and a long season of good trade is anticipated on account of the building contracts that are being let throughout the province.

There is no cutting of any account being done. Iron pipe, lead pipe and all large lines sell at quoted prices.

An especial increase in business is noted in steam and hot water heating supplies, some of the jobbing houses being kept on the go to fill orders.

LEAD PIPE—Prices are firm and the demand lively. We quote as follows: Lead pipe, 8c., discount 15 per cent.

SOIL PIPE AND FITTINGS — Our quotations are as follows: Medium and extra heavy pipe and fittings, 60 per cent.; 7 and 8 inch pipe, 40 and 5 per cent.

IRON PIPE—A large demand is felt and quotations are firm. We quote: Black, 1 in. pipe, $4.37; galvanized, 1 in. pipe, $6.02. See current market quotations for other sizes.

IRON PIPE FITTINGS—We quote: prices as follows: Cast iron elbows, tees, crosses, etc., 67 1-2 per cent.; cast iron plugs and bushings, 67 1-2 per cent.; flange unions, 65 per cent.; nipples, 75 and 5 per cent.; iron cocks, 60 per cent.; Canadian malleable, 35 per cent.; American malleable, 25 per cent.; malleable unions, 65 per cent.; malleable bushings and plugs, 60 and 10 per cent.; C. I. ceiling plates, plain or N. P., 70 per cent.; C. I. floor, 80 per cent.; hook-plates, 65 per cent.; expansion plates, 65 per cent.; headers or branch tees, 65 1-2 per cent.; ring hangers, black or galvanized, 70 per cent., American list.

GALVANIZED IRON RANGE BOILERS—We quote: 12 gallon capacity, standard, $4.50; extra heavy, $6.50; 18 gallon, standard, $4.75; extra heavy, $6.75; 24 gallon, standard, $4.75; extra heavy, $6.75; 30 gallon, standard, $4.75; extra heavy, $7.50; 35 gallon, standard, $5.75; extra heavy, $8.50; 40 gallon, standard, $6.75; 40 gallon, extra heavy, $9.50; 52 gallon, $11; extra heavy, $14; 66 gallon, standard, $18; extra heavy, $20; 82 gallon, standard, $21; extra heavy, $24; 100 gallon, standard, $29; extra heavy, $34; 120 gallon, standard, $34; extra heavy, $40; 144 gallon, standard, $47; extra heavy, $55. The discount on copper and range boilers continues at 15 per cent.

RADIATORS—Trade continues very good with an increasing demand as buildings in course of erection near completion. We quote: Hot water, 50 and 2 1-2 per cent.; steam, 50 and 5 per cent.; wall radiators, 50 per cent.

SOLDER—Prices are unchanged. We quote: Bar solder, half-and-half, guaranteed, 24c. to 25c.; wiping, 22c.

ENAMELWARE—We quote as follows: Plate E1, 5 feet, first quality, $20.65, special $18.65; plate E11, 5 feet, first quality, $19.15, special $17.15; plate E21, 5 feet, first quality, $19.15, special $17.15; plate E35, 5 feet, first quality, $24.65, special $22.40. Fittings extra.

NEW LIGHTING FIXTURES.

W. M. Campbell, manager of the International Gas Appliance Co. of Toronto, has just returned from a business trip through England and Germany. Mr. Campbell's reason for taking this trip was to put his firm in connection with an English glass manufacturing concern which would manufacture lights of the same style as are made in the United States. In this mission he was successful, having completed arrangements with Charles Joyner & Co., of Birmingham, England. The International Gas Appliance Co. will be sole Canadian agents for these goods. While in Germany he secured the exclusive American and Canadian agency for one of the largest glass manufacturing concerns in the world.

Although his time was limited, Mr. Campbell was able to enjoy one or two pleasure trips, and while traveling through Italy had the misfortune to be relieved of his pocketbook, containing his return ticket and a sum of money, but, luckily, when he arrived at his destination he met friends and was able to secure funds.

"Although the American man of business seems shrewd and is eager to take up a money-making proposition at once," said Mr. Campbell, "yet I think I prefer the Englishman. He is more conservative and takes time to deliberate. Where the American just looks at the present good he can derive from a business deal, the Englishman looks into the future."

While in London the representative of Hardware and Metal had the pleasure of entertaining Mr. Campbell.

"Black Diamond" is the Best Order-Getting Tarred Felt in Existence

That's not unexpected considering that it has always been one of our "pet" brands. One happy dealer referred to it as the "Black Prince." He evidently saw an anology between "Black Diamond's" victory and that at Cressy.

Wise is the dealer who sells "Leader" lines !

"BLACK DIAMOND"

TARRED FELT

Note—We presume you have a stock of "JOLIETTE" and "CYCLONE" **SHEATHING**, and also our various brands of **READY ROOFING, WRAPPING PAPERS, BUILDING PAPERS.**

ALEX. McARTHUR & CO., Limited,

82 McGILL STREET MONTREAL

F. J. C. COX, Winnipeg, Sole Agent for Northwest Provinces.

CURRENT MARKET QUOTATIONS.

Aug. 3, 1906.

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate.

EVAPORATION REDUCED TO A MINIMUM

is one of the reasons why PATERSON'S WIRE EDGED READY ROOFING will last longer than any other kind made.

Mr. C. R. Decker, Chesterfield, Ont., used our 3 Ply Wire Edged Ready Roofing fourteen years ago, and he says it is apparently just as when first put on.

We have hundreds of other customers whose experience has been similar to Mr. Decker's.

We manufacture a complete line of

Range-Closets, Range-Urinals, Lavatories and Sanitary Fixtures

Suitable for Public Institutions

The reputation of our goods is unequalled.

Toronto: 50 Colborne Street ***Montreal: 128 Craig Street West***
Winnipeg: 24 Telfer Building

HOME OFFICE and FACTORIES: PORT HOPE, ONT.

UNITED BRASS GOODS ARE BEST.
BEWARE OF THE "JUST AS GOOD."

Every sham and imitation made solely for profit since the world began has claimed to be "just as good" as the honest article it sought to imitate. Lots of cheap brass goods claim to be as good as UNITED, but are not. Figure it out. The maker of the cheap brass goods takes a profit and has some expenses to pay out of his price. How many cents does that leave for material and labor ?

UNITED BRASS GOODS ARE HONESTLY MADE.

They are sold at a fair profit. When you buy UNITED BRASS GOODS you are paying for best material and best workmanship, and you get them. UNITED BRASS GOODS are pre-eminent for strength, wearing qualities and beauty of design. In fairness to your trade you ought not to use any other kind and you cannot afford to. Let us tell you our prices.

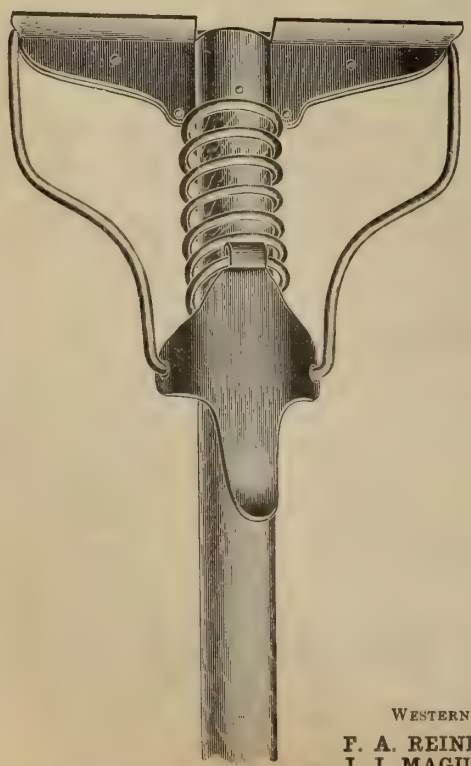
ARISE YE, WESTERN DEALERS!

The Fall shooting season will soon be at hand. The sportsman will get down his **Model 23**

Hamilton Rifle

and his boys, their **Models 15 and 19.**

But there will be a great number of new "shots"—those who, having contracted the hunting fever, will be looking for rifles.



You can get a big portion of this business if you see your jobber about **Hamilton Rifles.**

Model 15 (for boys) sells at $2.00
Model 19 (for boys) sells at 2.50
Model 23 (for men) sells at 3.50

MONEY-MAKING

WALL PAPERS

Judging Wall Papers by the standard of price alone will always be unsatisfactory.

It is vastly more important to consider the profit-earning possibilities of the different makes submitted for your approval.

We have learned the way to make our wall papers so pleasingly attractive, that quick sales and good profits are assured to the dealer handling them.

When our salesman turns over our samples you will recognize profit-earning possibilities not to be found in other makes.

Your order will be filled to your satisfaction.

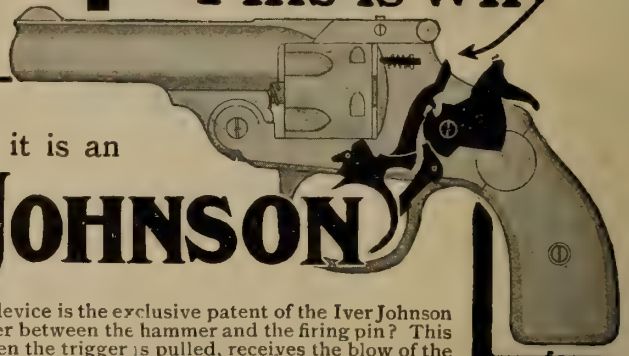
"I USE ONLY THE
C.P.Co's

Satisfaction is depicted upon every feature when the **Canada Paint Company's** colors and stains are being used.

The reason is **not** far to seek.



Enquire from **any** of the merchants who **sell** our manufactures.

We, ourselves, refrain from expressing **any opinion** as to the cause of this universal satisfaction.

THE CANADA PAINT COMPANY L'T'D

Accidental Discharge Impossible-

This is why

True only if it is an

IVER JOHNSON

The positive safety device is the exclusive patent of the Iver Johnson Revolver. See the lever between the hammer and the firing pin? This lever is raised only when the trigger is pulled, receives the blow of the hammer and transmits it to the firing pin. **That's why** you can throw a loaded Iver Johnson against a stone wall without fear—no discharge can possibly follow, as the hammer **never** touches the firing pin. An Iver Johnson never fails when you **pull the trigger** and never "goes off" when you don't.

Iver Johnson Safety Automatic

Prices—Hammer $6.50, Hammerless $7.50.

Iver Johnsons are sold by dealers the world over, or direct from us if your dealer won't supply

Please send for descriptive catalogue, free upon request. It tells all about it.

IVER JOHNSON'S ARMS AND CYCLE WORKS, FITCHBURG, MASS.

DO NOT

recommend the same material for finishing a floor that you would for a door. One is to be looked at and admired, the other is to be walked on, jumped on, has to withstand mud and water, furniture, pianos, sewing machines, etc., rolled over it and still be an object of admiration. Granitine Floor Finish for natural finish and Chijap Floor Lac for stained finish stand lots of abuse. They wear on the job, not off.

Manufactured only by

The Imperial Varnish & Color Co. LIMITED

TORONTO, ONTARIO, CANADA

WHAT OTHERS HAVE DONE YOU CAN DO

You are not selling

GRANITE FLOOR PAINT

because you perhaps imagine another hardwareman in your town has the trade "worked up."

Should that be the case, it's the best argument for your stocking up.

You are entitled to a share of the trade and can get it.

Simply work hand-in-hand with the opportunity—get ***Granite Floor Paint.***

If you are minus our latest **Catalogue** don't fail to write us.

THE STANDARD PAINT & VARNISH WORKS CO., Limited, WINDSOR, Ont.

It is Often Easy to Persuade

your customer that the best is the cheapest.

JAMIESON'S Floor Enamel

while more expensive than ordinary floor paint, is so much better for the floor that it should not be difficult to induce your customer to try it.

It Dries Hard
Is Never Sticky
Gives a Varnish Gloss
Stands Repeated Washing and Wears Like Iron

You can make more profit on **Floor Enamel** than you can on Floor Paint.

The Fall time is "Brighten Up" time. The agent or dealer who takes advantage of our big "Brighten Up" Campaign this year can build up a record business.

We don't stop when we put our goods on your shelves. You are not left alone to create a demand for them and build up a trade. We help you in every way to make sales and go after the business. It's to our advantage to do so, and it's to yours. Working together we both profit.

The Fall is a splendid painting season. Every year, for many years past, we have made a special campaign for business at this time. As a result our agents have had a splendid trade while other dealers were waiting for business that never came. This year our campaign is better than ever. Our "Brighten Up" Campaign we call it, and it is a winner. There are many trade pulling features in it and every one is strong. Our agents will do *the* business of their vicinity this Fall, because we are behind them and are working with them in every way.

If you are not one of our fortunate agents—if you do not know our fine line of paints and varnishes—the many good specialties we have that appeal to the Fall trade—how we work with you and for you to sell the goods—write us today. Get in now on our "Brighten Up" Campaign and make the profits grow this Fall.

PRICE and QUALITY

are two vital elements in

GILBERTSON'S

COMET GALVANIZED SHEETS

That means they are soft, smooth, and easily worked, that they are flat, well galvanized and that they are lower in price than other high grade brands.

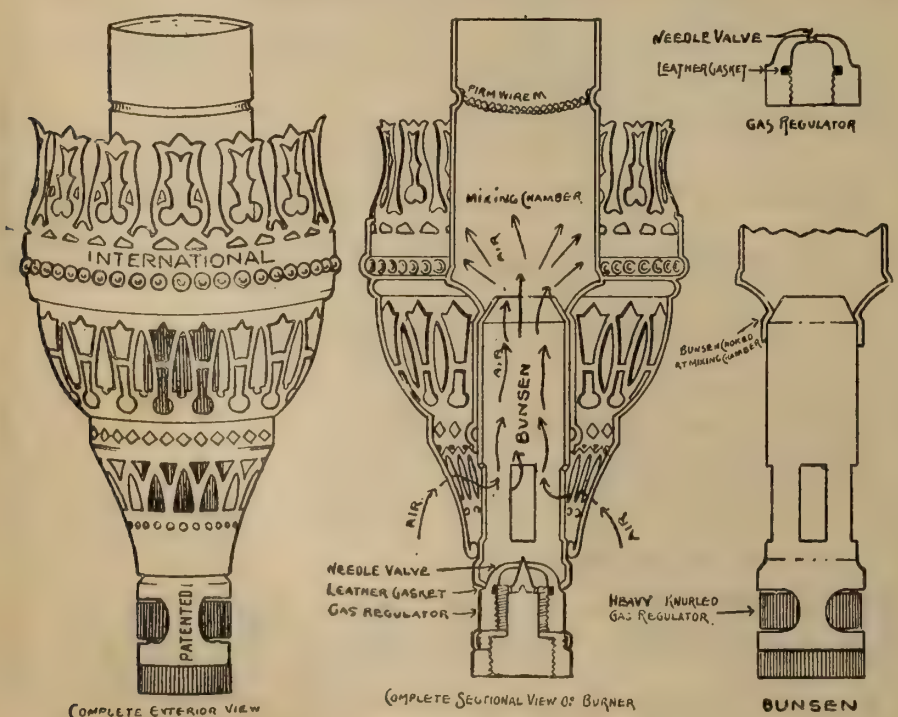
REPEAT ORDERS TESTIFY TO GOODNESS

When a trial order proves certain wares are "N.G." from the sales view point you do not have to be told what not to do.

DILLON HINGE-STAY FIELD FENCE

lives on repeat orders—we deal with the same dealers over and over again—of course, always adding new ones.

If the trial order of "Dillon" didn't show "sales results" there would be no second chapter.



How much stock shall we ship you?

THE OWEN SOUND WIRE FENCE CO., Limited

OWEN SOUND, ONT.

Sold by { **Messrs. Caverhill, Learmont & Co., Montreal.**

THREE FINISHES
CLOSED OR OPEN BASKET

	PER DOZ.
Polished Brass -	$4 25
Brushed Brass -	4 90
Oxidized Copper -	4 50
Deck Plates - -	0 15

The most Scientific Burner on the market today. Nothing to equal it in efficiency or appearance.

AN ORNAMENT IN THE MOST ARTISTIC HOME

Leather Packing or Gasket makes it absolutely impossible for any leakage of gas from the needle valve adjustment. Cannot light back into the bunsen or puff out when lit. The accompanying detailed sketch cannot fail to convince the most skeptical of its many advantages over every other burner on the market.

Manufactured expressly for and controlled in Canada, Great Britain and United States by

Manufacturers of all kinds

Rim and Mortise Locks, Inside, Front Door, and Store Door Sets, also full line High-class Builders' Hardware.

Sold by all Leading Jobbers in the Dominion.

IT DELIVERS MOST HEAT FOR THE COAL IT BURNS—THAT'S THE OXFORD BOILER'S STRONG POINT!

What stronger selling-point could you have?

If it can be proved to **you**—and it can be proved—that an Oxford Hot Water Boiler does more house-heating than other boilers, for the fuel it burns,—

If it can be shown to you—and it can be shown—that the Oxford insloped fire-pot walls, the Oxford hollow triangular grate-bars, the extra-roomy Oxford fire-pot, all save fuel and all get more out of fuel,—

If it can be made plain to you—and it can—that there is one-tenth the work for your men installing an Oxford Boiler, simply because it comes to you so far put together,—

If you can get a good look at the real Oxford advantages to you in profit, in reputation, in work saved, in solid satisfaction for the customer,—

What stronger argument would you want to hear?

No matter what your ideas are, you owe it to your own interests to ask questions of us about the 1906 special proposition on the

Oxford System of Hot Water Heating

The Gurney Foundry Co., Limited

We also manufacture Cast Iron Stoves and Ranges, Steel Plate Ranges, Gas Stoves and Heaters, Hotel Ranges and complete Hotel Kitchen Outfits, Warm Air Furnaces and all kinds of Cooking and Heating Apparatus, Plumbers' Supplies.

FEWER SHAKES, LESS DUST

The **Metallic Ash-Sifter** is made of sheet iron and metal lath—that means the sifter is strong.

THE METALLIC ASH-SIFTER

has our **Patent Double Lock Fold**—that means the sifter is **extra strong.**

The Metal Cover used in connection with the **Metallic Ash-Sifter** smothers dust in the infancy of its spread.

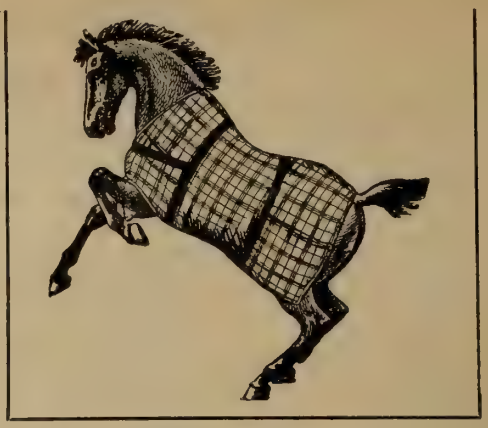
The **Patent Wire Bale** takes the weight off the operator.

FULL OF FACTS—OUR BOOKLET

C. M. CUTTS & CO.

SOLE MAKERS **TORONTO JCT., ONT.**

MIGHT and RIGHT



Want ads appearing between the covers of

Hardware and Metal

are read by the RIGHT people and ACTED on.

Want to sell. Want to buy. It makes no difference which. An expenditure of 25 or 50 cents in **Hardware and Metal** want columns will produce the desired result.

Rates 2c. per word, first insertion.
" 1c. " each subsequent insertion.

STAY-ON

Horse Blankets

The difficulty with most Horse Blankets is that no matter how you attach them to the horse, they will work off In the special make of our **STAY-ON BLANKETS** this difficulty is overcome. We have spent labor and money to perfect all kinds of horse clothing, and we are pleased to demonstrate to all the advantages derived from the use of our specialties. You pay no more for our goods than you do for inferior qualities.

Have You Received Our New Enameled Ware Catalogue?

To Our Customers and Friends

IT has been our good fortune for many years to have been favored with your loyal and generous support.

Steady development has characterized all branches of our business; at this time, however, we desire to direct particular attention to our Enameled Ware Department.

We have made a very careful study of the tastes and requirements of our customers, and after bringing to our aid the best skill and the use of only the best materials, it will be found that we have in our different brands of Enameled Ware variety and quality which it is impossible to surpass.

In our Catalogue we endeavor to convey to you as nearly as it is possible by printer's ink the appearance and character of our different brands. We have a full stock of each brand of these goods at Toronto, at Winnipeg and at Montreal.

We sincerely hope that the Trade will in the future, as they have in the past, avail themselves of the convenience of drawing from these stocks as their requirements may demand.

We shall try to merit your patronage by prompt attention to all orders.

The Only Apple Parer That's Made in Canada
The Only Apple Parer That Sells in Canada

You cannot be bothered with cheap American Apple Parers. They condense your profit account.

You want to sell Parers that you can stand along side of and say: "Yes, they certainly do work satisfactorily!"

Such Parers are the

Hudson Pattern Apple Parers

Every one is fit to be guaranteed and **is guaranteed.** Every one operates without a modicum of friction. Every one is made from downright "leader" material.

WHAT TO DO { 1st—Tap your jobber on the shoulder re **Hudson Pattern Apple Parers.**
2nd—Use the postal service as a means of telling us that you want a quantity shipped direct.

THOS. BIRKETT & SON CO., LIMITED
OTTAWA, ONT.

American Twin Freezer

Freezes two flavors of Ice Cream or an Ice or Sherbet and Ice Cream at one and same time, in one freezer.

SOMETHING ENTIRELY NEW —NEVER DONE BEFORE.

THE can is divided in two parts by a vertical partition. One flavor is placed in one, the other in opposite side of can, in each of which the scrapers, etc., operate. The can cannot be turned as in old style freezers, because of the partition. It is therefore swung to and fro by a rocking motion of the crank. This is a more comfortable and much easier movement. It is very much less tiresome than turning a crank. One can sit back in a chair with freezer alongside and rock the crank to and fro without discomfort or undue exertion and even read at same time. Although two flavors are frozen at once and with less exertion, no more time is required than in old style freezers.

The **Pails have electric welded wire hoops,** which are guaranteed not to break or fall off; Cans are of heavy tinplate with **drawn steel bottoms** that are guaranteed not to fall out or break and do not leak, the strongest and most durable Freezer Can made; the **Automatic Twin Scrapers** by their positive action insure perfect scraping of frozen particles from side of can. All inside parts are heavily coated with pure block tin, and outside parts all thoroughly galvanized.

SOLD BY LEADING JOBBERS.

Adze Eye Hammer Handle

No. 467—A Hatchet Handle (Bench) 18-in. Second Growth

HANDLE OUR HANDLES

No. 404—Single Bit Axe Handle (Oval) Oval or Octagon

No. 432—Adze Handle, House Carpenters' Pattern, 34 inches

Are you ever asked for first-class **AXE HANDLES** made from **KENTUCKY HICKORY**, of a sensible shape and put up in nice packages?

If you're unable to get these from your regular jobber, give us a trial. We have handles all grades, from the cheap No. 3 quality, up to the genuine second growth clear white, all put up in packages of 2 dozen, lined with blue glazed paper that insures their arriving at destination in first-class shape.

Our stock is not confined to axe handles only; we can supply all qualities of Pick, Adze, Sledge, Striking Hammers, Grub Hoe, Adze Eye and Machinists' Hammer, Hatchet Handles, etc.

In the smaller handles, we keep mostly the high-grade only, as nearly all our customers want this quality when they can get it.

Our different qualities, are the very best that can be made at their respective prices, and if you're looking for the best **HANDLE VALUE** the market, send us your orders.

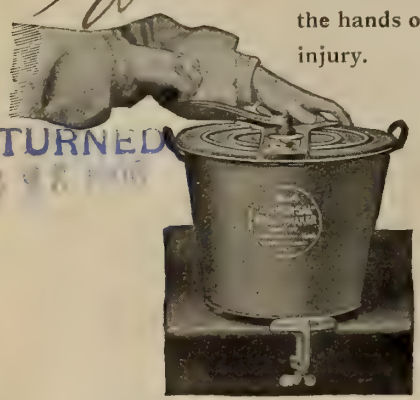
The "Dana" Mop Wringer. No more back breaking work in the cleaning of floors.

To the value of women's trade to the hardware store. Women are the purchasing agents of the home. The larger part of the income of the average man is expended by the woman of the house. Women do the spending, men do the providing.

Do you make your store attractive to women buyers? If not you are losing your opportunity Do you keep lines of goods specially calculated to appeal to women? If not you are losing money.



Here we show four lines needed in almost every home. They are among the best of their kind, and you can recommend them. Do you keep them in stock? If not let us send you some and see if they don't sell.

RETURNED AUG 28 1906

WHAT WE HAVE WE'LL MOVE

The Mistake of the Hour is Procrastination

= You know that **MAXimum Light Glass** is the most successful system of diffusing daylight through dark buildings.
= You know from genuine photographs that **MAXimum Light Glass** has surmounted seemingly insurmountable "dark" difficulties.
= You know that Canada is now enjoying an unprecedented era of building.
= You know that the modern dogma in building is "maximum efficiency."
= You know that with such a dogma prevalent, **MAXimum Light Glass** will enjoy a "greater-than-ever" popularity.

Then why don't you lean upon that counter of yours and on an everyday post card write these words:
"I want to know more about MAXIMUM LIGHT GLASS."

ZEPHYR Ventilator

saves the expense of building a high chimney.

It is so constructed as to guarantee a perfect draft, and, therefore, easy combustion.

By using the ZEPHYR, it is possible to burn soft coal with the best results.

The smoke is easily drawn off, enabling an even heat to be generated.

THE ZEPHYR IS STRONGLY PUT UP AND WILL RESIST ANY STORM

This is what others think of it:

Montreal, February 20th, 1901.

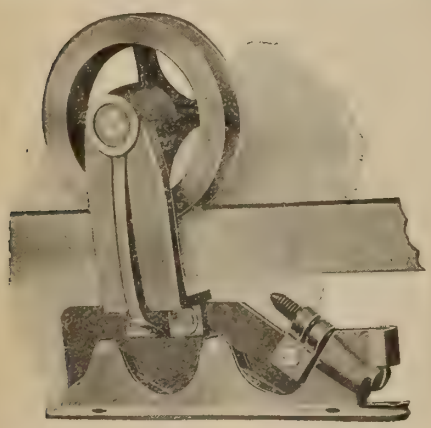
Providence Mother House

Messrs. HARRIS Co., Montreal.

Dear Sirs,

It is with pleasure that I can say that your "AEOLIAN" Ventilator is the best Ventilator we have used on our establishments so far. We had eight (8) of the large sizes put up on our Mother House and on the Hospice Gamelin and they gave us entire satisfaction.

Yours respectfully, SISTER MADELEINE, Dep.



We manufacture and Guarantee

The Harris Filter — The Zephyr Ventilator.
The Aeolian Ventilator. — Expansion Conductor Pipe.

The range that sells easiest——

Even the Imperial Oxford, with its fifteen improvements, doesn't rely on just the supreme value it gives the buyer.

It's advertised for you—we make sure of getting people into your store asking about the Imperial Oxford.

Once they are in, you'll have little trouble showing them why the Imperial Oxford is worth its price.

It's plain to see why the diffusive oven-flue makes faulty baking flatly impossible.

Why the draw-out oven rack makes basting easy—why the duplex draw-out grate makes repairs easy—why the perfectly-proportioned fire-box saves fuel and utilizes heat properly.

Your part of the selling is easy, because we've done the hard work before you ever got the range on the floor.

Doesn't that strike you as about the way you ought to conduct your range business?

PLUMBERS' CABINETS

Every plumber and steamfitter has a number of small articles such as rubber washers, rubber tips, etc., which can be kept to advantage in such a case as we illustrate.

With such a cabinet you can tell in a moment what you have in stock. The various sizes are kept in different drawers. No time is lost looking for some article you cannot find but which you feel sure you must have in stock.

You will also save your stock as this cabinet has a metal back and is dust proof.

Cabinets are made in all sizes, write for folder and price list.

SOLE MANUFACTURERS IN CANADA

?

A Question for Fitters:

If you were installing a hot water heating plant having 500 sq. feet of Radiator, and a boiler rated to handle the same amount, and you were asked by your customer if there would be any advantage in installing a larger sized boiler either in the interest of better service or economy in the consumption of fuel, and if so, why ? What would you say ?

Who can Answer it?

Readers of Hardware and Metal are invited to send in short replies to the above question. The replies will be published and the views of others are certain to be helpful to everyone who sends in a reply.

Easy Money for an Answer

To every plumber or steamfitter whose reply we publish, a year's subscription to Hardware and Metal will be given, while a special honorary prize of $5 will be given to the one sending the best answer.

ADDRESS ALL LETTERS TO

HARDWARE AND METAL, 10 FRONT ST. EAST, TORONTO

National Association of Master Plumbers

Annual Convention Held at Ottawa—Small Attendance, but Interesting Proceedings—Reorganization in Ontario the Keynote of the Gathering—Progress in Other Provinces.

The eleventh annual convention of the National Association of Master Plumbers, Gas, Steam and Hot Water Fitters of the Dominion of Canada was held at Ottawa on August 7, 8, and 9, 1906. President A. J. Hammond, of Winnipeg, called the meeting to order at 3 o'clock Tuesday, after an executive meeting had been held to outline the general proceedings.

H. A. Knox, on behalf of the plumbers of Ottawa, extended to the delegates present the welcome of the trade. Mr. Knox spoke of the one-time enthusiasm of the plumbers, and regretted that so few delegates were present. The wrong impressions existing in the minds of many, however, in connection with the plumbers' association, made it imperative that this meeting should be held. Some of the usual social features had been dispensed with this year, but the plumbers were welcome in Ottawa, and he hoped their time would be profitably spent.

Delegates Present.

A credential committee was then appointed by the president, who after a little deliberation found that all present were bona fide members and entitled to the privileges of the meeting.

Montreal — Joseph Lamarche, John Watson, L. J. Conroy, John A. Gordon, J. E. Walsh, Joseph Laurier, H. W. Munday, Walter Ryan.

Guelph—Harry Mahoney.

Ottawa—James Livock, H. L. Chandler, A. H. Edwards, F. G. Johnson, H. A. Knox.

North Bay—J. E. Farrell.

Ingersoll—Stephen King.

St. Thomas—C. T. Bull, Chas. Riddel.

Winnipeg—A. J. Hammond.

Jobbing Houses Represented.

United Brass Manufacturing Co.—W. H. L. Usher.

Jas. Robertson Co.—Wm. Greig.

James Morrison Brass Manufacturing Co.—Arthur Betton.

Star Iron Works—T. Carling.

United Brass Company, Cleveland—W. J. Colesworthy.

Hardware and Metal—Joseph Heale.

Plumbers' Trade Journal—G. W. Wood.

A letter from former Secretary W. H. Meredith, dated at Saskatoon, was read while waiting for the credential committee's report, expressing regret at his inability to be present, and hoping that profit and pleasure would be the result of the meeting.

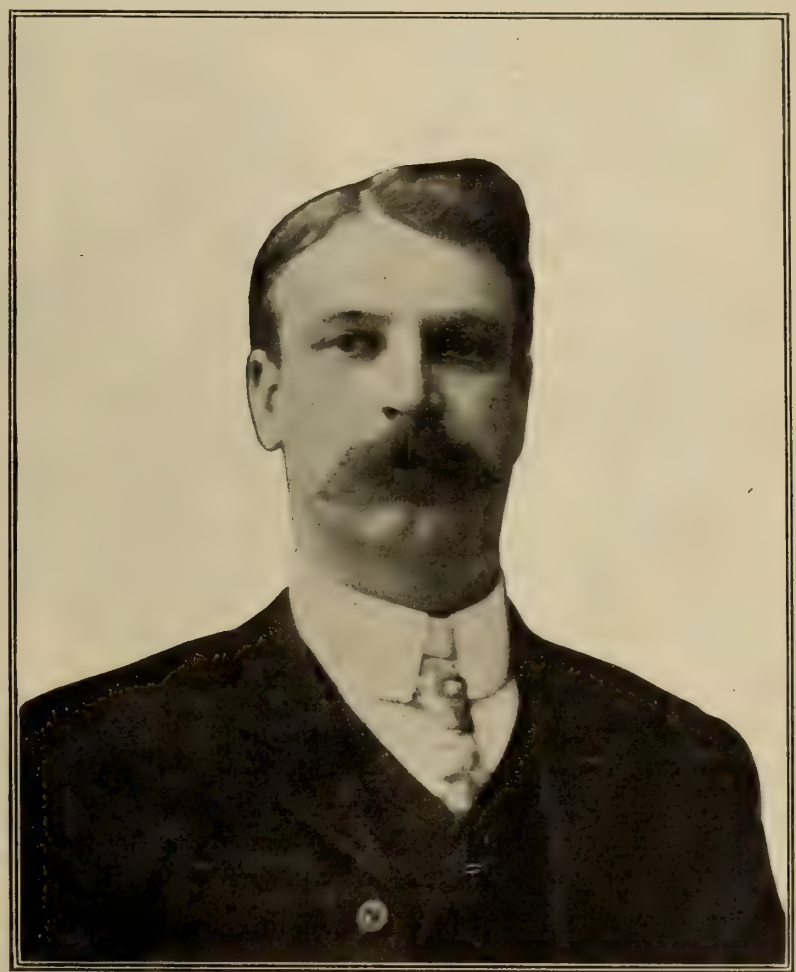
President's Address.

The president's report and address was read, and listened to with marked interest. Mr. Hammond said :

"Gentlemen,—I take it as a pleasure to submit my report to the eleventh annual convention of the National Association.

"On looking through the work of the past year it gives me cause to be gratified for the estimable way in which the business of the association has been carried through, and the most considerate help derived from the co-operation of the various officers of the association.

"It may interest the association to know that I have received and replied to something like seventy letters during my term of office. It has always been my endeavor to reply to any queries submitted to me for approval and appertaining to the general interests of the association.



"I feel proud of the work that has been accomplished and I am sure the association will agree with me when I say that our efforts have not been fruitless and that a large amount of good has resulted thereby. My personal views are that the recent complications in the trade go to prove that organization is the only visible means to save us from the evils now existing and arising partly from the uninformed and from the misrepresentations reported in the press.

"I am quite certain the day is not far distant when the master plumbers, one and all, will have to band together for the protection of their interests, and the sooner we wake up to these facts so much the better.

"It can be clearly seen that the only way to avoid a repetition of the past events and to alleviate our burden is to be more thorough in organization on a sound basis. This is the only remedy from which we can derive any satisfaction and it is our bounden duty to uphold any measures put forth from any individual member that will further tend to strengthen the work which we have before us.

"At the close of the convention last year in accord with the recommendation that a sub-executive be appointed in one city, Messrs. Ryan and Hughes were appointed to act in conjunction with Secretary Gordon as the sub-executive for the current year.

"One of the first matters undertaken was the printing of the annual report, which was somewhat delayed on ac-

A. J. HAMMOND, Winnipeg
Past-President, N.A.M.P.

count of the report being lost through the mail and thereby necessitating another copy being written and these did not reach the executive until the latter part of December.

"I would therefore recommend in future that when the minutes are to be mailed to the secretary the handling of these be left to some one resident in the city where the convention is being held, thereby insuring prompt delivery to secretary and not left entirely to stenographers.

"The usual grant was made to J. A. Gordon for previous year, also grants to provincial vice-president, including Ontario vice-president, which was passed by executive.

"Messrs. J. A. Gordon and P. Ogilvie attended the semi-annual convention of Ontario at Toronto in October last and were well received. At this convention a committee was appointed to meet a committee of the N. A. M. P. of U.S.A. to talk over certain mutual concessions, this same committee to report on all benefits to be derived therefrom. Mr. Mahoney will most likely satisfy us on this point.

"I am sure we were all sorry to hear of the late disaster at San Francisco, and hope that the master plumbers of Canada made a hearty response to the request for subscriptions towards the relief fund for master plumbers there. A request was made for our association to subscribe the sum of $50, and I anticipate this was forwarded in due course.

"I am desirous of bringing before the members of this convention a matter that has been somewhat prominent in my mind of late, namely, that of incorporation. My opinion is that if our association were incorporated we would not as individual members have the sole responsibility on our own shoulders and in case of any legal expenses being incurred at any future date they would be borne by the association as a whole. I am inclined to believe that it would place the association on a stronger footing, and put us in a position to overcome any further obstacles that may threaten us. This I recommend to the association for careful consideration and discussion.

"I would also recommend that we prepare a Dominion directory of members of the N.A.M.P., also a list of manufacturers and jobbers in accord, this list to be revised from time to time. This recommendation I am well aware was left in the hands of the incoming executive last year, but this remains in statu quo. This gives us further proof of the necessity of a permanent secretary, which I regret to say we have up to the present been unable to procure, for what reason I need hardly explain.

"During my term of office I have kept in touch with the various local associations within my reach and have thus, in a sense, obtained a bird's-eye view of the work being done, and considering the difficulties we have had to contend with I am gratified to see that we are still holding our own. This has been, nevertheless, what I might term an up-hill fight, but I am sure the reverses we have undergone will eventually increase the ranks of our association and that we will go forth with renewed vigor and determination, come what may, to take our stand for the promotion of our interests.

"Nova Scotia has no provincial association, but I am pleased to say that there is a local association in the City of Halifax and which is very complimentary to them.

"New Brunswick I find is in rather a more disorganized state, but trust to hear in the near future of some further developments towards organization.

"Quebec—In Montreal the conditions are more satisfactory, the association being pretty well intact and increasing in membership. It appears to me to be the mainstay of the province, and I am looking forward for excellent results from this quarter.

"Toronto has organized some fifty members, and hope by this time that she has increased her membership to such an extent that will be pleasing to all, also that Ontario has taken her place at the top of the ladder again.

"Alberta and British Columbia—I am not in a position to make any report thereon as I had no reply to my last inquiry, but trust these provinces will make their own report, which should be satisfactory.

"Manitoba—In Portage la Prairie and other towns throughout the province, I

F. G. JOHNSON, Ottawa,
President-Elect, N.A.M.P.

find organization at present out of the question as the plumbing business is as yet in its infancy, therefore they have no local association. In my own city we are in much the same shape as when you left us, with scarcely any prospect whatever of organization. We are, at the time of writing, in the midst of a strike and we are directing operations through the medium of the Builders' Exchange, of which about twenty master plumbers are members. The men's grievance was one that we could not see our way clear to accept. They presented their new schedule on the 30th of June with no alternative but for us to sign this on July 3 or an immediate strike would ensue. A meeting of the master plumbers of the city was held July 2 and it was decided not to accept their schedule in its present form and we notified them to this effect, but as there was no reply from the union they discontinued work July 3. Up to the present there is little prospect of a settlement as every day we are gaining ground and hope to be finally masters of the situation. The men up to the time of the strike were receiving a minimum of 35c. and a maximum of 50c. per hour. The new schedule called for 40c. to 52½c. per hour, but it was not so much the extra wage we objected to as the most stringent measures they wanted to enforce in their new schedule.

"At the last convention I had the honor of being appointed a delegate to the Master Plumbers' Association of the United States, but as I had this present strike in view and also our own convention so close at hand I was reluctantly compelled to decline the proffered visit, but was fortunate in securing a representative in the person of our secretary, Mr. Gordon. Mr. Mahoney also attended the convention, so there is no doubt in my mind that their report to this convention will be of benefit and that the association was well represented.

"I took the liberty of mailing C. J. Boyd, president of the N. A. M. P. of U. S., the following letters of the M. P. A. of Canada:

" 'To Mr. C. J. Boyd,
" 'President N. A. M. P. of U. S.,
" 'Atlantic City.

" 'On behalf of the Master Plumbers' Association of Canada I beg respectfully to tender their compliments to your association.

" 'I very much regret that in person I cannot be at the convention, though in spirit I shall be with you. However, I am sure it is the wish of each individual member of the association throughout Canada that the meeting be a progressive one and that it will be the means of further extending the interests of the N. A. M. P. of U. S. A.

" 'Wishing for the prosperity and success of your association, I am,

" 'A. J. HAMMOND,
" 'President N.A.M.P. of Canada.'

"This concludes my report for the year 1905-6.

"I thank you for the several honors conferred upon me, which I have tried to fulfill to the best advantage. It has been my sole aim on all occasions to promote the interests of the association as a whole, which I hope has not been in vain nor without some beneficial result.

"I wish to express to you my thanks for the way in which you have borne with me whilst I have endeavored briefly to expound the work of the association and its praiseworthy objects. I hope the eleventh annual convention will be a record gathering, and that all business conducted at these meetings will be brought to a successful issue.

"Finally, let us all unite in one desire to further advance the craft throughout the Dominion of Canada.

"Again thanking you all for your kind attention, and wishing you all prosperity in business, I am,

"A. J. HAMMOND.
"President."

Secretary's Report.

John A. Gordon, of Montreal, presented the secretary's report for the past year, which was as follows:

"Gentlemen,—Your secretary whom you elected for the second year to this very responsible position, wishes to thank you for the honor which you conferred upon him and regrets that the past year should have been without any visible results, but the unfortunate position in which several of the local associations were placed and the threatened actions which other local associations

had to contend with will account for this apparent lack of results.

"I have received 36 communications, have written 110 letters on association questions, and 40 on printing of annual report, some of which I trust have at least tended to show that there was still a National Association of Master Plumbers of Canada.

"JOHN A. GORDON,
"Secy. N.A.M.P. of Canada."

Vice-President's Report.

The report of the vice-president, F. G. Johnson, of Ottawa:

"I have the honor of submitting my report as vice-president for the past year. I thank you for the double honor conferred upon me at the Winnipeg convention when you elected me as vice-president and representative to the American National Convention for the year 1906.

"I am pleased, therefore, to meet you once again, and offer you a hearty welcome to our city.

"Regarding local conditions in the City of Ottawa, I regret to say that some of our master plumbers have of late taken no interest in our association, and would ask the National Association to use every effort to show them how important it is for each and every plumbing firm to get down to work as in the past.

"The Ottawa association had at one time a well organized membership, as the past shows, and I have made every available effort to keep it together. We have about twenty licensed plumbers. Most of them have been instrumental in the adoption of good plumbing by-laws, and the licensing of master plumbers and also registration of journeymen plumbers. I am also pleased to say that all our firms have plenty of work, but nevertheless prices are cut very fine by close competition existing.

"I had the honor of meeting the sub-executive and attending the annual dinner of the Montreal association. It was decided then to hold the present convention at the time and place appointed at the Winnipeg convention.

"I regret being unable to attend the National Association of the United States held in Atlantic City, therefore I am unable to embody the proceedings in my report, more than a passing reference to it.

"You will be pleased to know that our association was ably represented by our Secretary Gordon and Treasurer Mahoney, the latter representing also the Ontario provincial. You will no doubt have a full report from such able representatives.

"During the year I have received 33 communications, being from the president, secretary and treasurer, all of which I have acknowledged.

"To the secretary, Mr. J. A. Gordon, I owe the deepest thanks for his substantial assistance and guidance in my attempt to make the present convention a success.

"F. G. JOHNSON,
"Vice-President N.A.M.P."

Situation in Ontario.

Reports from provincial vice-presidents, covering Quebec, Ontario and New Brunswick, were read and a verbal report was given by J. E. Farrel, of North Bay, of the state of trade in his section of the country. Mr. Farrel reported trade good and prospects bright. He said the plumbers of Ontario should get over their troubles and get down to business again. He was disappointed that so far no Toronto men had turned up.

Harry Mahoney, of Guelph, in reply to Mr. Farrel, said that the Toronto association was doing nicely now. They had some 50 members, and outside towns were ready to fall in line with reorganization. He said it was easy to criticize Toronto for not having their one-time strong organization, but when an association receives a crack like the Toronto fellows received last year, it was impossible to get over it in a minute. Some of those who were members of the old association were just letting things go just to show those who did not believe in

HARRY MAHONEY, Guelph,
Re-elected Treasurer, N.A.M.P.

the association what it means to be without one. He believed Ontario would soon be back again stronger than ever—and wiser.

Committees Appointed.

Committees were appointed as follows:

Resolutions—Joseph Lamarche, Montreal; H. L. Chandler, Ottawa, and H. Mahoney, Guelph.

Press committee—Joseph Lamarche, Montreal; H. A. Knox, Ottawa, and J. E. Walsh, Montreal.

Select committee—W. Ryan, Montreal; H. W. Munday, Montreal, and C. T. Bull, of St. Thomas.

Auditing committee—F. G. Johnson, Ottawa; J. E. Walsh, Montreal, and J. Watson, Montreal.

The committees having been instructed to report at the next session the balance of time before adjournment was given to reading a couple of papers on "Should a master plumber use the working tools," and on "Old-time Plumbing by United States Plumbers."

A notice of motion was read asking that provincial associations be given the power to elect their own vice-presidents, but the maker of the motion not being present and no one else prepared to discuss the matter, it was laid on the table for future consideration.

WEDNESDAY MORNING.

When the association was called to order at 10.30 Wednesday morning, a letter of regret at being unable to attend, was received from R. B. Moody, president of the National Association of Master Plumbers of the United States. A letter was also received from G. A. Woodman, of the Nova Scotia association, expressing his regret at being unable to attend.

The reports of the different committees were read and adopted after some comment. The report of the apprentice committee was particularly interesting and brought forth a hearty vote of thanks from the meeting for the thorough manner in which it was given

---

THURSDAY SESSION.

Thursday morning wound up the work of the convention. A belated report from the vice-president of Saskatchewan and Alberta was read, which stated that the organization in those provinces was, although small, growing in numbers and strength. The matter of establishing a trade school in Calgary was recommended to the association, and was referred to a committee to be dealt with.

The Supply Men.

At this juncture several of the supply house representatives "sought admission," and business was suspended for a short time to welcome them. All these gentlemen contributed largely to the entertainment of the visiting delegates, and were more than welcome visitors. Wm. Greig, who has been with the James Robertson Company for forty-seven years, on behalf of his company expressed pleasure at being at the meeting. Many of the plumbers he knew from their youth up. He assured the association of the co-operation of the supply houses in their efforts to maintain the tenets and aims of the association.

Thomas Carling, who seemed to know everyone, was on hand. He said the meeting was the "best ever" as regards the treatment given the supply houses, and prophesied good results as a result of their work.

W. J. Colesworthy, of the United Brass Manufacturing Company, made a neat little speech, despite the fact that his lips could not even raise a mustache, so 'twas said. He had with him some nice souvenir gun metal watch cases which were eagerly sought after, as well as a pocket full of "chirps" commemorative of the occasion.

Arthur Betton, of the James Morrison Brass Manufacturing Company, thanked the association for their kindness and invited the boys to smoke up, which they did. His supply of clear Havanas and good fellowship were very welcome.

Last but by no means least was the redoubtable Usher (also of the United Brass), with his winning ways, extending his company's greetings to the assembly.

The vice-president in replying to the supply men said that when last they met in Winnipeg they had had some drawbacks, but were now in a position again to carry on the work better than ever. He concluded with a vote of thanks to the supply men.

Some discussion took place in regard to the relations between the plumbers' unions and the master plumbers, in connection with making contracts, etc. Complaints were made that the unions frequently failed to keep their contracts and at times made demands that were utterly unreasonable and unfair. Many were for an open shop as the only way to get justice. It was thought desirable by many that both the journeymen plumbers and the masters should be incorporated bodies so that they could more safely make agreements with each other, knowing that they would be carried out. This would also take the responsibility from individual members of either body, and put it upon the body corporate.

H. A. KNOX, Ottawa,
Chairman Sanitary Committee, N.A.M.P.

The Winnipeg strike situation was reviewed. Some of the demands of the journeymen seemed to be very unreasonable. In comparison with the present condition in the trade there the wages asked by the journeymen were excessive.

The report of the apprenticeship committee was also a subject for considerable discussion. The number of apprentices was altogether too small, and the conditions under which they were engaged unsatisfactory. To insure a sufficient number of capable plumbers, more apprentices must be engaged, and under conditions that will guarantee that when his time is out he will be a qualified journeyman.

Election of Officers.

The election of officers was then gone on with, resulting as follows :

President—F. G. Johnson, Ottawa.

Vice-President—John Watson, Montreal.

Secretary—J. A. Gordon, Montreal.

Treasurer—Hy. Mahoney, Guelph.

Provincial vice-presidents—For Nova Scotia, G. A. Wooten, of Halifax ; for New Brunswick, D. Shea, of Fredericton ; for Quebec, Joseph Lamarche, of Montreal ; for Ontario, B. Noble, London ; for Manitoba, C. E. Gate, Winnipeg ; for Alberta and Saskatchewan, E. J. Young, Calgary ; for British Columbia, Bert Weeks, Vancouver.

Chairmen of committees—Legislative committee, Hugh Wallace, Hamilton ; apprenticeship committee, E. H. Russel, London ; sanitary committee, S. H. Knox, Ottawa ; essay committee, A. J. Hammond, Winnipeg.

Montreal, Ottawa and Winnipeg were brought up as places for the next convention and by a standing vote Montreal was decided upon.

The president-elect thanked the delegates for electing him, and enjoined all present to help him in the good work.

Votes of thanks were tendered to the retiring officers, and to the entertainment committee, which were replied to by A. J. Hammond and H. A. Knox. The thanks of the association were also tendered the two trade papers for the interest shown in having representatives at the meeting, and for the full reports of the preceding meetings, which was acknowledged by Joseph Heale, representing Hardware and Metal, Toronto, and Geo. W. Wood, of the Plumbers' Trade Journal, New York.

The meeting broke up with the singing of "Auld Lang Syne" and the national anthem, and the delegates devoted the balance of the day to bowling and looking over the sights of the capital.

* * *

Among the lady friends of the delegates present at the outings were Mrs. Gordon, Miss Gordon, Mrs. King, Mrs. Bull, the Misses McDonald, Miss Chandler and the Misses Johnson.

* * *

The attendance was not so large as on former occasions, but the association is in better shape than ever to promote the interests of the trade. It's up to every master plumber in Canada to lend a hand. Don't lie down. Only by steady, united action can any great thing be accomplished.

* * *

The association was never better officered than now. President Johnson is a man of wide experience, and will make good, and the value of Secretary Gordon's and Treasurer Mahoney's work has been invaluable. Vice-president Watson is sure to make good.

* * *

Quebec's new vice-president is Joseph Lamarche, ex-alderman of Montreal.

* * *

The report of Past President Hammond and that of John Watson, of the apprenticeship committee, are worthy of note. They show thought and work, and no master plumber should miss reading them.

* * *

Munday, Laurier and Ogilvie, of Montreal, took a more than ordinary interest in the work and are deserving of commendation. Knox, of Ottawa, is also an enthusiastic worker.

* * *

Group photos of the delegates, the executive officers and the Ottawa "bunch" were received too late to have engravings made in time for this issue. They will appear next week.

APPRENTICESHIP COMMITTEE REPORT.

The report of the special committee on the question of apprenticeship is unavoidly crowded out this week but will appear with the photos of the convention in our next issue.

HARRY MAHONEY WELL SATISFIED.

"I'm well pleased with the convention from every standpoint," said Harry Mahoney, of Guelph, to Hardware and Metal when making a fraternal call on the editor on his way home from the convention. "Those of us who went to Ottawa did not expect a large attendance. We went to work and feel certain that the results of our efforts will be felt and appreciated by the trade in every part of Canada."

PLUMBERS' ADVERTISING.

Plumbers' ads are too conspicuous by their absence. In a half-hour's run over Canadian papers only four were noticed by the writer.

The average plumber thinks advertising is a sinkhole. The hardwareman once thought that too. But time alters the complexion of many viewpoints.

This Week the display is pure Colonial Electric Lighting Fixtures.
Exclusive Designs at Right Prices
SAMPLES AND DRAWINGS SUMMITTED
W. J. McGuire & Co.,
86 KING ST. WEST Phone 632
135

The two ads shown on this page do not cost much to run. One appeared in a Toronto paper, the other in a Hamilton paper.

Plumbing and Natural Gas Fitting
Installed by expert workmen. Satisfaction guaranteed. Estimates cheerfully furnished. Repairing promptly attended to. Open evenings. Phone 2687.
J. H. THOMPKINS
105 YORK ST.

McGuire's ad is especially forceful in design. It looks like a theatrical or savings company's announcement.

The wording in Thompkins' ad is pointed and sufficiently clear. Results would be bound to come after a few insertions.

HARDWARE TRADE GOSSIP

Ontario.

P. M. Yong, hardware merchant, Almonte, has sold out his business.

J. E. Hussey, Melbourne, Ont., has added hardware to his tinware business.

Fred. W. Otton, hardware merchant, Barrie, has been holidaying at Big Bay Point.

C. M. Strange, sales manager of Lewis Brothers, Montreal, spent Tuesday in Toronto.

J. S. Hall, hardware dealer, Yonge street, Toronto, has been spending a holiday at Huntsville.

W. H. Smith, hardware merchant, Fort William, has been succeeded by Fort William Hardware Co.

R. Young, Hugh Wallace and Geo. Stevenson, plumbers, Hamilton, were visitors in Toronto this week.

W. B. Morrow, of H. S. Howland, Sons & Co., Toronto, paid a short visit to Meaford during the week.

John Wright has secured a permit to erect a hardware store at Pears avenue and Avenue road, Toronto.

L. M. Vanstone, of H. S. Howland, Sons & Co., Toronto, is spending a fortnight's holiday at Bowmanville.

Over one hundred Copp Foundry employes and their families attended a picnic at Fort William last Saturday.

Thos. G. Scott has opened a hardware store at Dunnville. Mr. Scott was a buyer in Toronto during the week.

H. Clucas, Toronto, representative of the Canada Paint Co., Montreal, has been holidaying at Goderich, his old home.

A. G. Ritchie, of the John Ritchie Plumbing and Heating Co., Toronto, has returned from a holiday trip to Muskoka.

Martin Quinn, of Cluff Bros., Toronto, is receiving congratulations on the arrival of a junior Martin at his house this week.

W. J. Barrie, plumber, Sarnia, passed through Toronto this week on his way to the Knights Templar gathering at Montreal.

J. R. and Mr. and Mrs. J. W. McMillan, of McMillan Bros., hardware merchants, Guelph, spent civic holiday in Toronto.

J. M. H. Robertson, president of the James Robertson Co., of Montreal, Canada, made a flying visit to New York recently.

Harry Mahoney, Guelph, passed through Toronto this week on his way to the National Master Plumbers' Convention at Ottawa.

John Caslor, Toronto, treasurer of the Ontario Retail Hardware Association, took a holiday trip to the Thousand Islands last week.

F. G. McBrien's hardware store has been removed from Dovercourt street, just below Bloor, to fine new premises at 1000 Bloor street west.

D. Morgan, of Wray & Morgan, plumbers and fitters, Toronto, who has been spending the Summer at Rice Lake, has returned to the city.

McMurty & Bernhardt, of Preston, had a small fire in their new store on 27th July. The fire, which occurred in the basement, did damage to the extent of $250.

R. W. Harrison, of Harrison & Robertson, plumbers, Toronto, is recovering from his recent illness and is able to look after some of his business interests again.

Andrew Rodger's plumbing display room at Hamilton is the talk of all in the trade who see it. The effective display of fixtures brings business to the plumbing shop.

Thomas R. Parker, treasurer of the Canadian Oil Co., Toronto, left this week for Portland, Me., to join his wife and daughters, who are spending the Summer there and at Old Orchard Beach, Boston.

The employes of the Dominion Radiator Co., Toronto, will hold their fourteenth annual excursion and games next Saturday to Niagara Falls. About 500 employes and their families take advantage of this yearly outing

A most successful picnic took place on Saturday, August 4th, when the employes of the Gartshore-Thompson Pipe Foundry Co., Hamilton, and those of the Hamilton Facing Mills Co., had a good time at Niagara Falls. Over 500 took in the trip.

Huron Bears, of the McClary Mfg. Co., London, has been transferred to the Hamilton branch, where he will have charge of the shipping department. Before leaving he was presented with a pipe and tobacco pouch as a slight token of the esteem in which he was held by his fellow-workmen.

The Peterboro Rapid Tool Company will be ready for manufacturing in three months. The superintendent is W. J. Creedon, of Washington, O., an expert in the business. He has installed two auger bit plants and has been superintendent of a plant in Washington for nine years, and is one of the best men that could be secured on the continent.

Quebec.

T. G. Gumbley & Co., iron and brass workers, Montreal, registered.

Charles Gauthier, steel range manufacturer, Montreal, has been demanded to assign.

J. D. H. Browne, of Moore & Browne, Sault Ste. Marie, Ont., was in Montreal this week.

J. T. Henderson, hardware merchant, Niagara Falls, Ont., was a visitor to Montreal the end of this week.

T. H. Newman, of Caverhill, Learmont & Co., Montreal, is spending two week's holidays at Kennebunk, Me.

J. Thurston Smith, secretary Lewis Bros. Co., Montreal, has just returned from a holiday visit to Boston and the New England States.

Henry McLaren, of H. McLaren & Co., local agents for Taylor, Forbes & Co., of Guelph, was very severely crushed in an elevator here on Tuesday and is in a very dangerous condition.

Albert Labelle, formerly in the employ of J. H. Wilson, wholesale hardware, Montreal, has gone to Ranferly, Alberta, where he has started up in the retail hardware line in partnership with his brother, under the firm name of Labelle Bros.

Saturday afternoon last some three hundred employes participated in the annual excursion and picnic of the Dominion Bridge Company, Lachine. This year the excursionists chose as their destination pretty Ile St. Amour. A very enjoyable day was spent by all. A large programme of sports was successfully run off.

Gerald Wood, of the office staff of the Canada Paint Company, Montreal, leaving to accept a position with the National Drug & Chemical Company, Montreal, was initiated by his fellow workers in the office into the order of the Silver Elephant. Several impromptu speeches were made by those present, all of whom gave Mr. Wood a hearty send-off.

Manitoba and West.

The bailiff is in possession of goods of S. M. Jean, hardware merchant, St. Boniface.

J. R. Henderson, of Henderson & Potts, Halifax, was in Winnipeg during the exhibition and returned east last week. He took with him one of the largest paint orders ever given in Canada, an order for 30 cars of mixed paints in addition to putty and white lead. This order shows the buying capacity of the western trade and indicates the growing popularity in the west of "English" paints.

CANADIAN NAIL TRADE.

Arguing in favor of tariff reform, Bonar Law, M.P., in the British House of Commons, instanced the Canadian nail trade, and said that Canada put a tariff on nails against the States, with the result that she not only made her own supplies, but now exported in competition with the United States and Germany.

LARGE NEW STATION.

There is a rumor in Montreal to the effect that the Grand Trunk Pacific are about to build a $7,000,000 station, which will occupy the site of the present G.T.R. Bonaventure Station, and also that space between St. James and Inspector streets and Chaboillez square. There is reason to believe that the rumor is true. Elevated tracks are also to be erected between the station and St. Henry. The new station and tracks are to be used by both the G.T.P. and the G.T.R.

AN ASSOCIATION NECESSARY

The past year has been a somewhat unsatisfactory one for the plumbing trade in Canada on account of the so-called "combine" cases tried in the judical courts at Toronto and Hamilton, the effects of the sensational newspaper reports of the trials being felt in every part of the Dominion.

Hardware and Metal, as the only Canadian paper having a wide circulation amongst the plumbing and heating trades gave full and reliable reports of the events as they succeeded one another in rapid succession. In fact this paper was the only one through which the trade could learn from a friendly standpoint the true facts resulting from the investigations in Toronto and Hamilton. The American trade papers circulating in Canada were practically silent on a matter which was so vital to the plumbers and fitters in every part of Canada.

Association work has been seriously handicapped by the disorganization of the Toronto and Hamilton Associations but order is gradually developing out of the chaos which existed at the close of the prosecutions. The steady growth of the new master plumbers and steamfitters branch of the employers' association in Toronto is an evidence of the fact that the great majority of the trade recognize the advantages of organization and the holding of the National convention at Ottawa this year, in spite of the many existing obstacles, is another fact which should tend to greatly encourage the trade throughout the Dominion.

The publishers of Hardware and Metal desire to assist the work of extending the trade organization, in securing a living margin of profit, in elevating the trade and improving the standard of work done, in improving the sanitary conditions in Canadian towns and cities, in providing for an increased number of apprentices, and in any other way that a weekly trade newspaper can be of service.

All of these objects can best be achieved through a trade organization and with the same spirit which encouraged the holding of the convention at Ottawa this year in the face of many difficulties, the trade throughout Canada should soon be organized upon a sound basis and be of benefit to the general public as well as to every member of the association.

BE PROGRESSIVE.

The average master plumber or steamfitter occupies a favored position in the community and should grasp every opportunity which presents itself to be a factor in the development and public life of the town or city in which he lives. He is a practical business man with a greater knowledge of necessary public improvements than others who have not had a mechanical training. As a workman risen from the ranks and as a public-spirited business man he can win the confidence and esteem of all sections of the community, and providing business is not neglected for politics, the connections gained can be used to good advantage in developing his business.

As every dollar spent in a waterworks, sewage, power and lighting, street paving or park system makes the town a more desirable place in which to live, and by attracting tourists and visitors helps to build up the town trade, the plumber should take a strong stand in favor of all local improvement works proposed.

A little energy and thought put into the affairs of the community will help to broaden and develop the plumber's personality and widen his reputation. It will pay to be progressive.

NEW MILLS NEAR MONTREAL.

In the near future the Dominion Wire Manufacturing Co., Montreal, will erect an open hearth furnace, a blooming mill and combined rod and merchant mill. From present indications the company anticipate spending something like $500,000 for the erection of the buildings and the purchasing of the plant. Land on which to build is already in possession of the company, so that the half million will be spent on buildings and plant alone. The president of the company, F. W. Fairman, recently returned from Pittsburg, where he inspected the plants of several concerns. Mr. Fairman brought back with him W. H. Farrell, of Donora, Penn., who was employed as superintendent of one of the largest and best mills under the control of the American Steel & Wire Company. Mr. Farrell will be on hand to superintend the erection of the new buildings and installation of the plant, which will be erected on foundations of solid cement. The new buildings will be of mill construction. Some one hundred skilled mechanics will be employed in the new mills.

Hereafter the Dominion Wire Manufacturing Company will not find it necessary to buy finished iron and steel rods for use in manufacturing wire. The addition to their works will enable them to buy pig iron from different blast furnaces, and scrap iron, which products will be converted into rods at the company's own mills.

INVERTED GAS LAMPS.

The matter of improvement in lighting is ever a live topic with the progressive merchant, and even more so with those who are in the business of selling lighting materials.

A very unique light just now before the public eye is the Inverted gas lamp, which bids fair to take a very prominent place in the lighting industry. There are a very great variety of these lamps just coming into the Canadian market. The development of the inverted gas lamp has been slow, and from the nature of gas and the method of burning has had much difficulty to overcome.

Experts in the lighting field, both in Europe (where it was first brought out) and in America, have given much thought and no small outlay of money in repeated experiments with a most determined effort to produce a perfect, practical, commercial lamp of this type. A great variety of lamps have been manufactured and put upon the market, the larger percentage of which had no merit and were soon withdrawn.

To burn gas with a mantle hanging downward suspended from the top has been said to be "against nature." But the ingenuity of man usually finds a way to bring nature around to serve his purposes, and to-day the inverted gas lamp is a practical reality, and the wise dealer in lighting goods will lose no time in selecting some of those with merit and placing them in his stock.

The difficult feature to overcome in the inverted gas lamp has been its tendency to carbonize and destroy the lighting

power of the mantle. This tendency has been entirely overcome in many of the recent inventions. The chief advantages claimed for this new light are: 1st, very small consumption of gas; 2nd, beautiful in appearance; 3rd, impossibility to cast a shadow beneath; 4th, high candle power; 5th, while resembling electric light, is much better at half the cost to maintain; 6th, adaptability to all conditions, for office, store or house.

WHAT TO DO NEXT MONTH

Under the above heading it is proposed that about the first of each month a symposium of letters or suggestions be published, the intention being to as far as possible outline the most necessary things to be done during the month by retail hardware, stove and paint dealers, and master plumbers and steamfitters throughout Canada.

The department should be helpful to all readers of Hardware and Metal and short letters are invited from jobbers, travelers, retailers, bookkeepers and clerks giving their ideas of what is important to be done next in order to make the most of the trade opportunities which will present themselves during the succeeding months. What are the most simple and common place things to some are often overlooked by others, and each correspondent is, therefore, invited to submit a full outline of seasonable things to do.

The interesting letters which are published this week are from correspondents who have the interests of the trade at heart and have written solely for the pleasure of doing something which may be helpful to some in the trade, and we are sure their contributions will be appreciated.

The department will be published again in Hardware and Metal of September 1, and it is hoped that some interesting letters will be received giving suggestions of what should be done by the trade in September.

One important thing for the trade in Ontario to do is to take advantage of the low railway fares and visit Toronto during the Industrial Exhibition, taking advantage of the opportunity to attend the convention of the Retail Hardware and Stove Dealers' Association on September 4 and 5 as well as visiting the sample rooms of the various jobbers and manufacturers who make exhibits of the newest goods in their various lines.

Hardware Lines to Sort.

Fred C. Lariviere, of Amiot, Lecours & Lariviere, Montreal, writes that he greatly approves of the idea of getting pratical suggestions as to what to do each month. He writes:

Based on this, to your first question, "What are the timely things to do," I believe the most pressing would be to go over the stock of harvest tools, paris green, hammocks and general sporting goods; outside of guns, rifles and ammunitions, I believe no reasonable offer should be refused to liquidate the stock which, if not sold will surely lay over till next year.

"What class of stock should be sorted for Fall business?" Amongst many others the principal would be stoves, stove pipes, coal hods, fire shovels, ash shifters, stove pipe varnish, sleigh bells, skates, steel, iron and wood shovels, sidewalk cleaners, guns, rifles and ammunitions.

"What lines should be pushed and how best can a turn over be secured." To the first part I would say that an up-to-date merchant or clerk will push all class of goods he has in stock at any time, and according to the customers he is serving, and to the second part I will apply the maxim: "Goods well bought are half sold," but I see no particular lines which would give a very quick turn over, unless it be seasonable goods.

"From the office end what should be done in order to keep finances in good shape and make every saving possible." This is the proper time to look over all accounts, principally those that are falling behind, to make a separate list of these accounts, so as to follow them very carefully, when collection time comes and every account collected or settled by note, all open accounts. I am aware of country merchants letting farmers accounts run three or four years without a settlement; I think this very unbusiness like, for at least every account should be closed, no matter how small it be, by cash or a note, either on demand or on time, so that the account be possibly closed every year leaving no room for claims or disputes; outside of the fact that these notes can be made to bear interest at the rate of 6 per cent. per annum it is therefore another investment, with the advantage of having negotiable effects, and should the merchant for one reason or another wish to transfer the accounts for collection or as collateral he can do so without any trouble.

A representative of one of the tin and enamelware manufacturers writes:

A great many of the merchants may not be aware of the fact that the metal market has been advancing daily, and all those who have not booked their requirements for Fall would do well to attend to this. At the present time we are shipping our Fall orders, such as stove pipes, elbows, lanterns and stove boards. These goods, of course, date from September 1, and thus give the dealers an opportunity of placing them on their shelves and getting them marked off ready for Fall trade.

A suggestion has been brought forward on seceral occasions regarding collections. In going through the different sections of the country, and calling on a great many of the trade, I find that a number of the hardware merchants have shortened the term of credit to their customers, and have signs conspicuous in their stores to the effect that their terms are cash. Why let the consumer allow their accounts to stand, and you are compelled to pay in 30 days, or at the longest three months?

W. H. Evans, of the Canada Paint Company, Montreal, writes:

The Fall is presumably the best time to paint. After the first appearance of cold weather the flies, like the proverbial angels visits, become "few and far between." The clouds of dust cease and the absence of muggy "steamy" weather facilitates paint drying and one is in a jolly mood (or should be if your liver is working right) to wield the brush!

Take an hour in the paint and varnish department and note in your "want book" deficient lines of dry colors in oils, coach colors, white lead, wagon paint, wood stains, house and carriage varnishes, buggy and sleigh paints, ready mixed paints, especially the floor paints. Now turn to barn paint, stove pipe varnish, aluminum and gold paint. Look into stove lining, and don't forget the putty. The latter is of little intrinsic value, but of immense commercial importance.

One or two lines should be singled out and pushed every day by what is called in England, "the introduction method." This means, after a customer has made an ordinary purchase, you tactfully and "with winning grace" show him a small tin, say of aluminum paint, and remark, "Have you seen our silvery aluminum paint?" Show it off painting a few narrow strips of stove pipe iron. Don't be too obtrusive, but enlarge upon its merits. Now hand out a liquid paint folder and sweetly invite the customer, him or her, to "come again!" Change your specialties each day, or at least every other day. Keep a bright look out for casual telephone orders and make a list of your longest regular buyers and call them up at least once a week for "anything on the list please?"

OUR COVER DESIGN.

The handsome cover design used by Hardware and Metal this week is used through the courtesy of Messrs. Haines, Jones & Cadbury, manufacturers of "Hajoca" plumbing supplies, Philadelphia. The design is a striking one illustrating a plumber having his troubles installing a lavatory and the firm named deserve credit for getting up such a unique design for an engraving.

BACK TO INDOLENCE.

A good story is told of one of Toronto's wealthy young men. Some years ago, through the death of his father-in-law, he came into a position of affluence. He immediately threw up the position he occupied as clerk and spent his days in indolence except when participating in military functions or performing military duties.

A year or two ago he got tired of his life of indolence and decided to go to work again as of old. He went into a general store in Lindsay and worked as a clerk, even at times sweeping out the store.

This went on for six months without his having drawn a cent of pay. At the end of the six months his desire for the old indolent life mastered him and he decided to return to it. He announced the fact to his employer and suggested that he and the latter toss up as to whether he should be paid double the amount that was owing him or nothing. His employer accepted and won, so that he worked six months without a cent of pay.

MARKETS AND MARKET NOTES

(For detailed prices see Current Market Quotations, page 74.)

THE WEEK'S MARKETS IN BRIEF.

MONTREAL.

Ingot Tin—Prices have risen three cents.
Pig Iron—Several lines have been advanced.
Solder—Higher quotations are the rule.

TORONTO.

Pig Iron—A half dollar advance has been made.
Ingot Tin—Quotations are one cent higher.
Tank Plates—An advance is considered likely.
Coal—Prices have been revised.

Quebec Hardware Markets.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, August 10, 1906.

Dealers report a slight falling off in the amount of business transacted this week. The very hot weather we have been having is held responsible for this to a great extent, besides which trade during the Summer months cannot be expected to keep up week after week. For the time of year the business passing is very encouraging, however, and dealers cannot complain of an absolute quiet by any means.

Preparations to meet the Fall trade are going on apace. Everyone takes an optimistic view of the coming season, which is expected to be an excellent one in all respects. Inquiries received for different lines for Fall would seem to justify the holding of such a view. Travelers are now, in most cases, all back on the road again and are getting after Fall trade in earnest.

Prices have been very steadily maintained throughout the week.

AXES—Market conditions remain unchanged. We still quote as follows: $7.60 to $9.50 per dozen; double bitt axes, $9.50 to $12 a dozen; handled axes, $7.50 to $9.50; Canadian pattern axes, $7.50 a dozen.

HANDLES—Business continues about as usual at following prices: No. 3, $1.25; No. 2, $1.50; No. 1, $1.90 a doz.; adze handles, 34-inch, $2.20 a dozen; pick handles, No. 2, $1.70; No. 3, $1.50 a dozen.

RIVETS AND BURRS—Dealers report little change in the situation. The demand has been fairly good at the following prices: Best iron rivets, section, carriage, and wagon box, black rivets, tinned do., copper rivets and tin swede rivets, 60, 10 and 10 per cent.; swede iron burrs are quoted at 60 and 10 and 10 per cent. off new lists; copper rivets with the usual proportion of burrs, 35 per cent. off; and coppered iron rivets and burrs in 5-lb. carton boxes at 60 and 10 and 10 per cent.; copper burrs alone, 30 per cent., subject to usual charge for half-pound boxes.

HAY WIRE—Demand at present is not heavy. Some few inquiries have been received recently, but not many. We are quoting: No. 13, $2.45; No. 14, $2.55; No. 15, $2.70; net cash, f.o.b. Montreal.

MACHINE SCREWS—There is no change in the situation this week. Discounts continue: Flat head iron, 35 per cent.; flat head brass, 35 per cent.; Felisterhead iron, 30 per cent.; Felisterhead brass, 25 per cent.

BOLTS AND NUTS—Very fair business is being transacted at figures quoted. Discounts: 3-8 and smaller, 60 per cent. and 10 per cent.; 7-16 and larger, 55 per cent.

HORSE NAILS—The market continues unchanged since last report. Business is fair to good. Discounts remain: C brand, 40, 10, and 7 per cent.; M.R.M. Co., 55 per cent.; P.B. brand, 55 per cent.

WIRE NAILS—There has been no change in the situation since last week. Prices in different sections do not always agree, but $2.05 per keg base, f.o.b. Montreal is about the average.

CUT NAILS—Business is on the slow side this week, few orders being received. Dealers continue to ask $2.20 per keg base, f.o.b. Montreal.

HORSESHOES—In this market conditions remain about the same as they were last week. We are still quoting: P. B. new pattern, base price $3.50 per 100 lbs.; M. R. M. Co., latest improved pattern iron shoes, light and medium pattern, No. 2 and larger, $3.65; No. 1 and smaller, $3.90; snow pattern, No. 2 and larger, $3.90; No. 1 and smaller, $4.15. Light steel shoes, No. 2 and larger, $4; No. 1 and smaller, $4.25; featherweight, all sizes, No. 0 to 4, $5.60. Toeweight, all sizes, No. 1 to 4, $6.85. Packing, up to three sizes in a keg, 10c. per 100 lbs. More than three sizes, 25c. per 100 lbs. extra.

SPORTING GOODS — All Fall lines are subject to considerable inquiry at present, leading dealers to look forward to satisfactory Fall business. Present trade is on the quiet side.

BUILDING PAPER—In building paper the situation remains unchanged. The volume of business passing is not large, but trade is not expected to be active at this season. Prices show no change.

CEMENT AND FIREBRICK — What was said in our report last week applies again this week. In small orders there is considerable activity, but the demand for anything like large lots is almost nil. Firebrick continues on the quiet side. Quotations: "Lehigh" Portland in wood $2.54; in cotton sacks, $2.39; in paper sacks, $2.31. Lefarge (non-staining) in wood, $3.40; Belgium, $1.60 to $1.90 per barrel; ex-store, American, $2 to $2.10 ex-cars; Canadian Portland, $2 to $2.05. Firebrick, English and Scotch, $17 to $21, American $30 to $35; White Bros.' English cement, $1.80 in bags, $2.05 in barrels in round lots.

COIL CHAIN—There is nothing new to report. We are still quoting as follows: 5-16 inch, $4.25; 3-8 inch, $3.75; 7-16 inch, $3.55; 1-2 inch, $3.35; 9-16 inch, $3.30; 5-8 inch, $3.20; 3-4 inch, $3.05; 7-8 inch, $3; 1 inch, $2.95.

FREEZERS—This line is quiet at present in wholesale circles, though there is still some activity in a retail way. Prices are: American Twin, 2 quart, $2.30, 3 qt. $2.65, 4 qt. $3.25, 6 qt. $4.15, 8 qt. $5.10, 10 qt. $6.40, 12 qt. $7.75, 15 qt. $9.95, and 20 qt. $13; Gem, 1 pt. $1.35, 1 qt. $1.60, 2qt. $1.75, 3 qt. $2.15, 4 qt. $2.60, 6 qt. $3.25, 8 qt. $4.20, 10 qt. $5.45, 12 qt. $6.50, 14 qt. $7.25; Blizzard, 1 qt. $1.25, 2 qt. $1.70, 3 qt. $1.95, 4 qt. $2.35, 6 qt. $2.95, 8 qt. $3.70, 10 qt. $4.80, 12 qt. $5.75, 14 qt. $6.75.

GREEN WIRE CLOTH—No change is noticeable this week and we are still quoting $1.45 per 100 square feet.

AMMUNITION—There is considerable inquiry for different lines and a good Fall season is anticipated. Prices remain as follows: Loaded with black powder, 12 and 16 gauge, per 1,000, $15; 10 gauge, per 1,000, $18; loaded with smokeless powder, 12 and 16 gauge, per 1,000, $20.50; 10 gauge, $23.50.

Ontario Hardware Markets.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, Aug 10, 1906.

No price changes have occurred since last report, but wire nails are the subject of some talk on account of one manufacturer who is said to be selling at $1.95 while $2.05 is the prevailing rate. Other wire goods are slow, only a few sorting orders being received.

Travelers are back on the road, but business is slowing down considerably. Sorting orders are fairly large. Shipments of sporting goods are going out in increasing quantity on orders booked some time ago. Builders and heavy hardware are having a seasonable trade.

AXES AND HANDLES—Seasonable trade continues to be done.

CUTLERY AND SILVERWARE—A good demand is felt for these lines.

SPORTING GOODS—Shipments are large on booked orders. Firearms and ammunition are selling well.

SCREEN DOORS AND WINDOWS—The demand is pretty well met in these goods. Sorting orders are still being received.

LAWN MOWERS AND HOSE—Trade

is slow, but some sales are still being made.

REFRIGERATORS AND FREEZERS—Not a great many of either are being sold.

WASHING MACHINES—Business has been good and the demand is good for this season of the year.

CHAIN—We quote as follows: 1 inch, $6.60; 5-6 inch, $4.55; 3-8 inch, $3.95; 7-16 inch, $3.80; 1-2 inch, $3.65; 9-16 inch, $3.55; 5-8 inch, $3.45; 3-4 inch, $3.35.

EXTENSION AND STEP LADDERS—Prices continue as follows: Step ladders at 10c. per foot for 3 to 6 feet, and 11c. per foot for 7 to 10 feet ladders. Waggoner extension ladders, 40 per cent.

POULTRY NETTING—Following last weeks advance we quote: 2-in. mesh, 19 w.g., discount 50 and 5 per cent. All others 50 per cent.

GALVANIZED WIRE—We quote: $2.17 1-2 f.o.b. Cleveland.

BARB WIRE—Prices remain the same. We quote: On gauge 9, $2.40; guage 12, $2.55; gauge 13, $2.65; f.o.b. Toronto.

OILED AND ANNEALED WIRE—(Canadian)—Gauge 10, $2.31; gauge 11, $2.37; gauge 12, $2.45 per 100 lbs.

WIRE NAILS—The open market continues. We quote: $2.05 base.

CUT NAILS—We quote: $2.20 base, f.o.b. Montreal. Toronto, 20c. higher.

HORSENAILS—"C" brand, 40, 10 and 7 1-2 off list. "M.R.M." brand, 55 per cent. off. "Monarch" brand, 50 and 7 1-2 off. "Peerless," 50 per cent. off.

HORSESHOES—Our quotations continue as follows: P.B. base, $3.65; "M.R.M. Co., latest improved pattern" iron shoes, light and medium pattern, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; snow, No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $4.15; No. 1 and smaller, $4.40; featherweight, all sizes, 0 to 4, $5.75; toeweight, all sizes 1 to 4, $7. Packing, up to three sizes in a keg, 10c. per 100 lbs. extra; more than three sizes in a keg, 25c. per 100 lbs. extra.

RIVETS AND BURRS—Tinned rivets are now quoted net extra 4c. per lb.

SCREWS—We quote: On gimlet point 70 and 5 per cent. off; on cone point, 70 and 10 per cent. off list.

BOLTS AND NUTS—Stocks are bare and supplies very hard to get. Demand is keen with prices very stiff. We quote 55 and 10 per cent. off list.

CEMENT—We quote: For carload orders, f.o.b. Toronto, Canadian Portland, $1.95. For smaller orders ex warehouse, Canadian Portland, $2.05 upwards.

FIREBRICK—English and Scotch fire brick, 27c. to 30c.; American low-grade, 23c. to 25c.; high-grade, 27 1-2c. to 35c.

HIDES AND WOOL—The wool situation is unchanged. There is plenty of it in the country. The feeling here is that those who have already sold are the wise ones and that lower prices will prevail. With hides the situation is somewhat similar. There are plenty coming in but offerings on the other hand are not very numerous.

Canadian Metal Markets.

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, August 10, 1906.

There has been no falling off in the amount of business being transacted. The trade is in a very healthy condition on all sides. During the week there have been several changes in prices.

In pig iron prices there have been further changes. Three lines have been advanced while a decline is noticed in another. The extra demand on the continent is held responsible, to a great extent, for the advancing prices.

Antimony is not of very great interest at present. The market is featureless.

A sharp advance which has occurred in ingot tin is the feature of this market. The price has been raised considerably.

COPPER—Conditions have not changed since last report. The market is firm under a good demand. Stocks are none too heavy and are getting smaller. Quotations remain: Ingot copper, 21c. to 21½c.; sheet copper, base sizes, 25c.

INGOT TIN—There has been a sharp advance in ingot tin since last week, prices having jumped 2½c. to 3½c. Consequently figures quoted this week are: 44c. to 44½c. per pound.

ZINC SPELTER—The tone of the market is a little firmer again this week. We are still quoting $6.75 to $7 per hundred pounds.

ANTIMONY—The situation in antimony has not changed. Stocks held are not as large as they might be. The price has not advanced during the week, 27c. per pound still ruling.

PIG LEAD—The market has been a little weaker since last report but is now recovering. Quotations are unchanged at $4.35 to $4.45.

PIG IRON—Carron, Clarence and Cleveland have all been advanced fifty cents, while Summerlee is lower. The heavy demand on the continent for English and Scotch irons is gradually reducing stocks held and holders are consequently inclined to demand higher prices.

"Dom.," No. 1, $19.50 to $20.00 delivered Montreal
Usual difference in price for lower grades.

Ferrona No. 1	$19 50	delivered	Montreal
" No. 2	19 00	"	"
" No. 3	18 50	"	"
" No. 4	18.00	"	"
Londonderry	20.50	"	"
Carron No. 1	22.50	"	"
" (special)	21.50	"	"
Summerlee No. 1	21.50	"	"
" No. 3 (soft)	20.50	"	"
Clarence No. 1	19.50	"	"
" No. 3	19.00	"	"
Cleveland No. 1	19.50	"	"

BOILER TUBES—Conditions remain as last week with prices as follows: British and American tubes, 1½ inch, 8½c.; 2 inch, 8½c.; 2½ inch, 10c.; 3 inch, 12c.; 3½ inch, 15¾c.; 4 inch, 20c.; 5 inch, 45c. Price per foot net.

TOOL STEEL—Demand is not very brisk at present. We are quoting: Colonial Black Diamond, 8c. to 9c.; Sanderson's, 8c. to 45c., according to grade; Jessop's, 13c.; Jonas & Colver's, 10c. to 20c.; "Air Hardening," 65c. per pound; Conqueror, 7½c.; Conqueror High Speed Steel, 60c.; Jowitt's Diamond J., 6¼c. to 7c.; Jowitt's Best, 11c. to 11½c.

MERCHANT STEEL—Fair trade is being transacted in this line at these prices: Sleigh shoe, $2.17½; tire, $2.27½; spring, $2.75; toecalk, $2.82½; machinery iron finish, $2.27½; ruled machinery steel, $2.75; mild, $2.17½ and upwards; square harrow teeth, $2.27½. Net cash 30 days. Rivet steel quoted on application.

COLD ROLLED SHAFTING — There is nothing new in this market. Prices remain: 3-16 inch to 1-4 inch, $6.80; 5-16 inch to 11-32 inch, $5.78; 3-8 inch to 17-32 inch, $4.76; 9-16 inch to 47-64 inch, $4.08; 3 1-8 inch to 3 7-16 inch, $3.60; 3-4 inch to 1 7-16 inch, $3.75; 1 1-2 inch to 3 inch, $3.50; 3 1-2 inch to 3 15-16 inch, $3.75; 4 inch to 4 7-16 inch, $4.08; 4 1-2 inch to 4 11-16 inch, $4.42.

GALVANIZED IRON—There has been practically no change since last week. Demand good at figures quoted: Queen's Head, 28 gauge, $4.35 to $4.60; 26 gauge, $4.20; 22 to 24 gauge, $3.65; 16 to 20 gauge, $3.50; Apollo, 28 gauge, $4.25 to $4.50; 26 gauge, $4.10; 22 and 24 gauge, $3.55; 16 to 20 gauge, $3.40; Comet, 28 gauge, $4.25 to $4.50; 26 gauge, $4.10; 22 and 24 gauge, $3.55; 16 to 20 gauge, $3.40; Bell brand, 28 gauge, $4.40 to $4.45; Fleur-de-Lis, 28 gauge, $4.20 to $4.45; 26 gauge, $4.05; 22 and 24 gauge, $3.50; 16 to 20 gauge, $3.35; Gorbal's "Best Best," 28 gauge, $4.20 to $4.45; "Windmill Best," 28 gauge, $4.15; Sword and Torch, 28 gauge, $4.15; Colborne Crown, 28 gauge, $4.20 to $4.45. In less than case lots 25c. extra.

BLACK SHEETS—We are quoting: 28 gauge, $2.40; 26 gauge, $2.35; 22-24 gauge, $2.30; 19-20 gauge, $2.30; 8-10 gauge, $2.45.

CANADA PLATES—More or less business is being done in this line. Quotations remain: 52's, $2.60; 60's $2.65; 75's, $2.75; full polished, $3.75 to $4; galvanized, 52's, $4.10; 60's, $4.35.

TIN PLATES—Although in some quarters an advance was expected, it has not yet taken place, and we continue to quote: Cokes, base size, IC 14x20, $4; charcoal, base size, IC, 14x20, $4.25.

TERNE PLATES—Dealers are still quoting $6.85.

SHEET ZINC—The market remains unchanged at the following figures: $7.75 in casks and $8 in less than casks.

SHEET LEAD—There is no new feature in the market. We quote: 2½ lbs., 5½c. by the roll; 3 lbs. and

heavier, 5¼c. by the roll; small quantities, 25c. per hundred lbs. extra.

BAR IRON—The price has not changed, the trade still asking $2.05 base, f.o.b. Montreal.

OLD MATERIAL — The market is rather quiet at present, little business being done on any hand. Copper is about firm. Prices are steadily maintained as follows: Light copper 14½c.; heavy red brass, 14½c.; yellow brass, 11½c.; light brass, 7½c.; lead, 3¼c.; zinc, 4c.; machinery cast scrap, $13; wrought scrap, $12; stove plate scrap, $10.50 to $11; mixed rags, $1 to $1.20 per 100 lbs.; old rubbers, 7¾c.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, Aug. 10, 1906.

The feature of the metal markets this week is the general advance in pig iron prices. This advance is the result of the rapidly increasing demand. Buyers seem to have got frightened that they would not be able to stock the iron they would require for the Fall if they put off buying until later, and the result is that the furnaces have had an unusual demand, a demand which they have found difficulty in filling, hence the rise in prices. Radnor is now quoted at $31 instead of $30, Hamilton, at an advance of 50c. per ton, Londonderry and Middleborough at an advance of 50c. per ton.

Ingot tin has also taken a jump, quotations now being 1c. per lb. higher. It is probable that an advance of 15c. will be made in tank plates next week, as they cannot now be bought so as to sell at present quotations.

The general activity of the metal market continues. There is a very heavy demand for bar iron; indeed, so great is it that there is considerable difficulty in meeting it. The tin market is increasing in activity. There are no changes in the market conditions of the other metals, nor in their prices.

PIG IRON—Because of the heavy demand, the prices of pig iron have been advanced. The furnaces have found it impossible to turn out sufficient iron to meet the demand, and in consequence there has been a general advance. Radnor is now quoted $7 above former price, Hamilton, both grades, 50c., Londonderry, both grades, 50c., and Middleborough 50c. Changed quotations are as follows: Radnor at furnace, $31; Hamilton at furnaces, No. 1, $21; No. 2, $20.50; Londonderry, f.o.b., Toronto, No. 1, $22.50; No. 2, $21; Middleborough, $22.

BAR IRON—The demand is so heavy that there is difficulty in meeting it. We quote: $2.15 base, f.o.b. Toronto, with discount of 2 per cent. net cash.

INGOT TIN—There is an active demand and prices have been advanced 1c. per lb. Changed quotations are 42c. and 43c. per lb.

TIN PLATES—Trade is active with prices unchanged. We quote: Cokes, base size, 14x20, $4; charcoal, base size, 14x20, $4.50.

GALVANIZED SHEETS—Prices are well maintained and stocks are said to be light. We quote: 16 to 20 gauge, $3.45 up.

BRASS—The market continues firm with no price changes. We quote: 23c. to 24c. per lb.

COPPER—There has been more activity felt than for some time past Prices are firm at the same quotations. Our prices are: Ingot copper, $20 per 100 lbs. and sheet copper, $25 per 100 lbs.

LEAD—There is not much trading in lead at present. Local dealers are quoting $4.40 for imported pig, and $5 per 100 lbs. for bar lead.

ZINC SPELTER—The market is quiet and prices remain unchanged. We quote: 7¼c. per lb. for foreign and 5¾c. to 6c. per lb. for domestic.

BOILER PLATES AND TUBES — The demand is good and an advance of 15c. per 100 lbs. for 3-16 inch tank plates is looked for soon. Our prices are: Plates, per 100 lbs., $2.35; heads, per 100 lbs., $2.60; tank plates, 3-16 inch, $2.45; tubes, per 100 feet, 1½ inch, $8.50; 2, $8.80; 2½, $10.75; 3, $12; 3½, $15.80; 4, $20. Terms, 2 per cent. off.

ANTIMONY—There is an active market, and prices are unchanged at 27c.

OLD MATERIAL — Dealers' buying prices are as follows: Heavy copper and wire, 15c. per lb.; light copper, 13½c. per lb.; heavy red brass, 13c. per lb.; heavy yellow brass, 11c. per lb.; light brass, 8¼c. per lb.; tea lead, $3.25 per 100 lbs.; heavy lead, $3.50 per 100 lbs.; scrap zinc, 4½c. per lb.; iron, No. 1 wrought, $11 to $11.50; No. 2 wrought, $3 to $5; machinery cast scrap, $13.50 to $14; stove plate, $10; malleable and country mixed rags, $1 to $1.25 per 100 lbs., according to quality.

COAL—We quote the following prices: Anthracite in cars at bridge, egg, stove and nut, $5.40; grate, $5.15; pea $3.50 per gross ton.

Standard Hocking, soft coal, in cars, f.o.b. at mines: Lump, $1.50; ¾ inch, $1.40; run of mine, $1.30; nut, $1.25; N. P. and S., $1; slack, 75c.; box cars, 10c. per ton additional.

Youghiogheny soft coal in cars, bonded at bridges: 1¼ inch, $2.55; ¾ inch, $2.45; mine run, $2.35; slack, $2.05.

For Manitoba, British Columbia and Maritime Provinces markets see pages following.

UNITED STATES METAL MARKETS.

From the Iron Trade Review, Cleveland, Aug. 9, 1906.

The remarkable activity in pig iron and the certainty of its continuance for well onto another year at least are indicated by the heavy inquiry of the present market, in a number of cases extending through the first half of 1907. Present indications are concerned chiefly with cleaning up tonnages, which have remained available for this year's delivery. In the east, sales of the week have aggregated 125,000 tons, and in Chicago about 100,000 tons of all grades have been sold. In the central west inquiries are pending for 100,000 tons of basic for the first quarter of 1907, and one western agent has disposed of the output of its furnaces for the first two months of that year. A sale of 15,000 tons of Bessemer has been made at $18 valley, and the Bessemer Pig Iron Association has neither basic nor Bessemer available for the remainder of the year. Foundry No. 2 is scarce at $14 Birmingham, and at $17.50 in the Ironton district, with other quotations accordingly.

Prices are advancing more rapidly toward those of the boom period of 1902 than conservative interests like to see, and in this tendency lies the only danger which now threatens a long continuance of prosperity. Rumors have been current that prices of iron ore are to be advanced 50 cents per ton, but there is no authority for such an announcement. Ore merchants deplore any tendency to force the buying of ore before next Winter, and some of them at least are decidedly opposed to more than a 25 cent advance.

In finished lines much the same situation prevails. The Tennessee Coal, Iron & Railroad Co. have sold their entire output of open hearth rails for 1907 delivery. The principal producer of bar iron has advanced the price $2, and one large independent interest has advanced sheet bars the same. Sheet bars are exceedingly scarce with mills from ten to twelve weeks behind on deliveries. Recent plate bookings have been heavy and inquiries are now pending for 20,000 cars. Tin plate specifications are increasing and a heavy tonnage of merchant pipe has recently been placed. Coke continues firm and scarce. Old material has improved considerably.

U. S. IRON AND METAL TRADES.

From the Iron Age, Aug. 9, 1906.

The monthly pig iron statistics emphasize again the inability of the blast furnaces to increase production. The coke and anthracite furnaces made 2,013,402 tons of iron in July, a month of 31 days, as against 1,976,733 tons of iron in the 30 days of June. The weekly capacity of 295 furnaces active on August 1 was 451,908 tons, as compared with 460,570 tons for 293 furnaces on July 1. Considering the drawbacks of high humidity, the July 4 holiday and the thin linings on which many furnaces are working, the July record is probably better than might have been expected.

It is significant that the coke and anthracite furnaces have shown a steady decline in output since the high mark reached in March, when the average daily output was 69,859 tons. In April it was 69,107 tons, in May 67,701 tons, in June 65,891 tons and in July 64,948 tons. More furnaces must be relined, and it does not appear that August will turn the tide.

Foundry pig iron markets have carried the advance farther and $14, Birmingham, is now the minimum for southern No. 2 iron. Two important south-

ern producers have withdrawn from the market in the expectation that prices will range higher as the Fall demand appears. Furnaces in the Central West are quite well sold for the balance of the year, and the future of the market depends much on whether buyers catch the fever and repeat the familiar feat of bidding for iron in excess of requirements. Eastern Pennsylvania furnaces have their figures squarely at $18 at furnace for No. 2 iron. The poor working of furnaces has given a disproportionate supply of lower grades.

In the east the buying of basic iron is not over. Inquiries for 25,000 to 40,000 tons are pending for fourth quarter. Some basic has been taken also for the first quarter of 1907.

Finished material markets, while not sharing in the advances that have attracted attention to pig iron, are unusually active for early August. Rail buying is perforce about over for 1906, but for 1907 delivery the Seaboard Air Line has bought 20,000 tons and the Southern Railway has taken 15,000 tons of Bessemer rails from northern mills.

The wire trade has made an astonishing record this Summer. The July bookings averaged far beyond those of last July, while August promises even greater things. The capacity of the leading producer is operated to its limit.

LONDON METAL MARKETS.

From Metal Market Report, Aug. 8, 19.6.

PIG IRON—Cleveland warrants are quoted at 51c. 1 1-2d., and Glasgow standard warrants at 51s. 9d, making prices as compared with last week unchanged for Cleveland warrants and 1s. higher for standard warrants.

TIN—Spot tin opened weak at £179 15s., futures at £180, and after sales of 230 tons of spot and 620 tons of futures closed weak at £178 15s. for spot, £179 2s. 6d. for futures, making price as compared with last week £8 2s. 6d. higher on spot and £8 5s. higher on futures.

COPPER—Spot copper opened easy at £83 2s. 6d., futures £82 12s. 6d., and after sales of 50 tons of spot and 200 tons of futures, closed firm at £83 7s. 6d. for spot, and £82 17s. 6d. for futures, making price as compared with last week 17s. 6d. higher on spot and £1 5s. higher on futures.

LEAD—The market closed at £16 13s. 9d. making price as compared with last week unchanged.

SPELTER—The market closed at £26 15s. making price as compared with last week 5s. higher.

The Standard Paint Co., of Canada, are erecting a large works in Cote St. Paul, Montreal, which will be in operation about October 1 this year. They will manufacture rubberoid roofing, "Giant" cold storage insulating paper, "P. & B." paints and varnishes, and tapes. Lockerby & McComb, 65 Shannon street, Montreal, are their city agents.

Nova Scotia Trade News.

Halifax, N.S., August 8.

The plumbing trade throughout the province is good, and in Halifax it is particularly active. Dealers in radiators and hot water boilers report that the demand for both is increasing. Several large contracts have been awarded recently. Messrs. Longard will do the heating of the Morris street school, a fourteen-room building, and Farquhar Bros. will install the plumbing and the ventilating. Messrs. Day & Kinsman will do the plumbing in St. Patrick's new school for girls, a twelve-room building, and Messrs. Longard Bros. will put in the heating apparatus. Messrs. Farquhar Bros. have the contract for the electric light wiring, and also the roofing of the same building. It is stated that the plumbing in the Morris street school will be the best in the city, the American local vented closets being put in. These are of the Smith & Anthony make. The plumbing in the new Trachoma hospital will be put in by G. A. Wooten.

The trade reports that the Stafford and Gurney radiators are the ones now mostly used in Halifax, but that the Amherst Foundry Co., of Amherst, N.S. is cutting in to a considerable extent, there being quite a demand for their make of radiators.

One of the biggest jobs so far in sight is the new Catholic Church on Liverpool Road. Macdonald & Co. have the contract for this building, and Messrs. Farquhar Bros. will put in the wiring for the electric lights. Besides the above there are many private residences in the course of construction, and the firms of W. T. Craig and Crump & Perrior are doing the plumbing and heating in a great many of them. It is stated that in a large percentage of the new buildings hot water apparatus is taking the place of base burners, the people preferring the more modern system of heating, as it is cleaner, more reliable, and on the whole gives better satisfaction.

* * *

Gold mining matters are booming at Goldboro, N.S. The famous Richardson mine, which has been working continuously for seventeen years, is now down six hundred feet, and the prospects continue excellent. In June the quartz crushed yielded 503 ounces of gold, which would give a value of near $10,000. It is the intention of the company to put in an additional crusher. The Seal Harbor mine, which adjoins the Beaver Hat mine, has a shaft sunk 150 feet and good values are being shown. The company intend putting in air compressors and installing an electric plant. Several new finds of gold have also been made in that part of Guysboro County which promise well. The owners of the Beaver Hat mine are delighted with the progress being made at their property. At the Micmac mine everything in the way of development is being rushed to completion. The concrete is laid for the new mill and in due time an equipment second to none in the province will be in operation.

* * *

A. G. Morrison, solicitor for the Rose Mining Company, has just returned from a visit to the company's property at St. Rose, C.B. He reports that Mr. Ira Taylor is at present in London arranging the company's financial matters, and states that the development of the coal property and the building of the railway will be commenced at once.

* * *

Messrs. J. Watson Webb, J. J. Higginson, Jr., and H. Le C. Roome, of New York, were recent visitors to Louisburg, C.B. They represent a number of American capitalists, and their mission to Louisburg was in connection with mining ventures in which they are interested.

* * *

Representatives of Nova Scotia coal mines recently held one of their periodical meetings in Halifax for the purpose of considering prices, and it is said the Intercolonial contracts were the chief subject of consideration. Among those present were: J. R. Cowans, Cumberland Coal & Railway Company; Harvey Graham, Nova Scotia Steel & Coal Co.; Alexander Dick, Dominion Coal Company; J. T. Burchell, Caledonia Mines; William Lithgow, Nova Scotia Steel & Coal Company; C. J. Coll, of the Acadia Coal Company. It is said that the Government threatens to import Welsh and American coal if they cannot secure it in this province at what they consider a fair rate.

* * *

A. E. Waters, one of the directors of the Canadian Mining & Development Co. was a recent visitor to Whycocomagh, C.B. The company with which Mr. Waters is associated is now actively engaged in developing the iron properties owned by it near Whycocomagh. The areas, which are extensive, are located down the bay about four miles from the village. A seam of ore of the red hematite variety has been struck at Logan's Glen, and the output so far shows very rich in quality, being at least sixty-four per cent. iron. Where developing operations are going forward is located at an elevation of 150 feet above the tide water, and is three-quarters of a mile distant from a fine shipping location, where the water is bold and the anchorage desirable. The elevation and distance is a great advantage, as all the shipping can be done by gravitation. It is expected by the Fall that some shipments will be made.

* * *

The rod mill at the steel plant at Sydney, C.B., keeps continually working with one single shift, turning out a supply that is a trifle below the demand. A large reserve stock is on hand, and this is being continually encroached upon. The market at present is much stronger than it was in the Spring and early part of the Summer, and no trouble is found in disposing of the article manufactured. It was feared at one time this season that this section of the plant would have to be closed up, owing to the weak buying of the product. Present prospects indicate that the mill will be kept going full swing from now on, and the men are anxiously looking forward to the time when the double shift can go on.

J. M. Brooks is to build a $20,000 hotel at Peterboro'.

Hardware and Metal Conditions in Manitoba

(Market quotations corrected by telegraph up to 12 a.m. Friday, Aug.10, 1906.)

Office of HARDWARE AND METAL,
Room 511, Union Bank Building,
Winnipeg, Man.

Values are steady in all lines, there being no quotable changes of importance this week. Business continues exceptionally active for the month of August.

O.G., single, in 100-ft. cases — 16 to 25 united inches, $4.00 ; 26 to 40, $4.52 ; 41 to 50, $4.75 ; 51 to 60, $5.25 ; 61 to 70, $5.75. 21-oz. C.S., double, in 100-ft. cases—26 to 40 united inches, $7.35 ; 41 to 50, $8.40 ; 51 to 60, $9.45 ; 61 to 70, $10.50 ; 71 to 80, $11.55 ; 81 to 85, $12.60 ; 86 to 90, $14.75 ; 91 to 95, $17.30.

New Brunswick Trade News

St. John, N.B., Aug. 7, 1906.

There seems little of noteworthy interest to record regarding the plumbing trade in the province during the past twelve months. Business has gone on quietly, too quietly for some of the plumbers to be well satisfied, and nothing has occurred remembrance. On the whole, as indicated in the foregoing sentence, the time has been one of comparative dullness for many of the men in the business. The Winter season was one of more than usual mildness, and, as a consequence, the volume of the plumbing business done, fell off somewhat below the average of what we may call the "good" years past. The amount of pipe repairing that had to be done during the Winter time was a great deal less than was expected and in every way the trade was not kept as busy as in most Winters. So far this Summer, too, the plumbers do not seem to have been kept with the average amount of work on hand. One explanation for this may be that the number of new buildings going up is not large. Consequently, the plumbing men have not been called upon as in most other Summers. There has, it is true, been quite a bit of "old work" done, but on the whole the season is proving to be somewhat disappointing.

* * *

It may well be noted here that there is no doubt that the demand for better fittings is yearly becoming stronger in St. John, and in the province generally. Tiles are coming more into use with the passage of every month. Higher quali-

Metal Shelf Boxes

For Sale Cheap

I have 500 Metal Shelf Boxes for sale cheap. Bought them cheap and will sell them right. They have solid oak fronts and handsome brass pulls and the 500 will fit up a good sized hardware store. Used only two years and as good as new. This is a rare chance.

ties of bath tubs are looked for now than formerly; fancy lavatories are being called for with greater frequency, and shower baths, etc., are in far more general use than ever. Moreover, it is certain that the demand for high-class fittings will be much stronger favorites in every succeeding year. Naturally, this is something which is not at all unpleasant to the plumbers who have more than once desired such a state of affairs if extremes are avoided.

* * *

In heating of houses here as elsewhere the hot water method is superseding the other ways that have been in use. This has become very noticeable in recent years and in the past twelvemonth it has become even more apparent than at any previous time. It is not surprising that the case should be as stated for the superiority of the method specially referred to over the other method has been clearly shown on many occasions. The appliances used, it is said, are for the most part of Upper Canadian manufacture. These goods seem to give general satisfaction and are increasing in favor. At the same time one must not lose sight of the fact that some of the appliances in use are the products of United States factories. Canadian made goods are well capable, however, of holding their own in this as in many other cases.

* * *

During the past year one local plumbing and heating firm has given up business here, namely, that of Freeze Bros. This firm retired from the field on the departure for the west of Charles Freeze, one of the partners.

* * *

Generally speaking, the outlook for the Fall trade is fair only. The dealers are expecting a medium business.

EXPORT TRADE DEVELOPING.

The Ontario Wind Engine & Pump Co., of Toronto, are now preparing an order for shipment to the Levant of thirty Canadian air-motor outfits, also a shipment of two 16ft. airmotors for Egypt. That this firm's goods are giving satisfaction may be judged from the following extract from a journal, printed by the Imperial Government in one of the Crown colonies of the east.

"The satisfaction that these airmotors have given is great, and up to this time no complaints have been heard. This company by issuing such a good article have experienced a steady growth in their business every year for the last ten years. They are moreover again extending their factory in order to better carry out their large trade."

It is interesting to note that these airmotors are used largely to supplant water wheels worked by mule power for irrigating purposes.

SUCCESSFUL JOBBERS AND SALESMEN.

No. 28.

Frank Ross Newman, who has been appointed manager of Caverhill, Learmont & Co.'s Winnipeg branch to succeed Mr. Waldon, is the eldest son of T. H. Newman, of the firm of Caverhill, Learmont

FRANK ROSS NEWMAN,
Manager, Caverhill, Learmont & Co., Winnipeg Branch.

& Co., and was born in Montreal in 1876. He began his business career with Caverhill, Learmont & Co. in 1893, in Montreal. Some seven years later he accepted the position of purchasing agent for the Laurentide Pulp Co., at Grand Mere, Que., where he remained until appointed manager of the Fairbanks Co., Winnipeg branch (now the Canadian Fairbanks Co.) His determination and energy resulted in building up a most successful business there, which is now thoroughly organized on a sound footing. He is well known in the west for his business tact and integrity.

Mr. Newman will take charge early in September.

LOOKING BUSY.

We have all met the man who mistakes perspiration for inspiration, the man who would rather look busy than be busy. This type of man is of the opinion that it is foolish to use his head to save his heels. So long as you make a big noise, do hand springs and sweat at your work, he is satisfied and does not give a rap for results. Noise is not necessarily work. We are living in an age of ball bearings. The man who gets there must secure a minimum of friction in order to get up a maximum speed. The man who is doing his very best work to-day may be relied upon to do even better to-morrow. Many a man has capacities but lacks the capacity necessary to discover them.

The James Smart Mfg. Co., Brockville, will put a Kelsey system in the new Methodist church, Markdale, Ont.

DEATH OF R. D. MUNRO.

Keen regret will be felt by a large circle of friends on learning of the death of Robert Duncan Munro, the eldest son of Mr. Robert Munro, managing director of the Canada Paint Company, Montreal, which occurred August 1.

"Bobbie," as he was familiarly known amongst his confreres, was a general favorite and had numbers of sincere friends, both in Montreal and on the Pacific coast, where he resided for some time, being manager of the British America Paint Company, Victoria, B.C.

Robert Duncan Munro was born in Scotland, but came to Canada at an early age to join the staff of Fergusson, Alexander & Co., who were established in Montreal. Upon this business being merged into that of the Canada Paint Company, the deceased went with the new company and proved a most valuable all-round man. Painstaking and hardworking, he was equally at home in finance, organization and practical colormaking.

Mr. Munro was a young man of marked ability and great promise; from his fifteenth year he had been associated in business with his father. Six years ago on an application from the British American Paint Company of Victoria, B.C., he accepted the position of general manager of that company, whose business he conducted with conspicuous success for four years. Two years ago, however, he developed tuberculosis, and withdrawing from business, he spent a year at Calgary, then a year at Saranac Lake, but, despite all care and skill, the fell disease made steady progress, and two months ago he returned home to spend his last weeks with the members of the family. His loss is mourned by father and mother, a brother and two sisters, one being the wife of the Rev. J. R. Dobson, of Montreal.

THE LATE R. D. MUNRO, Victoria, B.C.,
Son of Robert Munro, Managing Director Canada Paint Co., Montreal.

Hardware and Metal joins in the widespread sympathy which will be evoked for his parents, Mr. and Mrs. Robert Munro, and the family.

TRADE INQUIRIES.

Correspondents desiring to get in touch with any of the firms referred to should quote the reference number when requesting addresses. For information write to Superintendent of Commercial Agencies, Department of Trade and Commerce, Ottawa.

911. Agent—A West Bromwich, England, firm desire to appoint a good agent for steel springs of all descriptions.

914. Copper, lead, etc.— A London firm handling copper, lead and antimony ores and metals, will be pleased to hear from Canadian producers who can ship actual supplies.

918. Machine tools—A Yorkshire engineering firm would be pleased to send catalogues and estimates to Canadian engineers, for all descriptions of machine tools.

919. Machines etc.—A north England firm desires to correspond with Canadian engineers for the sale of high-class machines, treadles, lathes and universal grinders.

920. Flags and bunting—A Yorkshire firm manufacturing all classes of flags and bunting, desire to get in touch with Canadian buyers experienced in Canadian trade.

942. Scrap iron—An exporter of scrap iron in Marseilles will gladly enter into correspondence with Canadian buyers.

943. Woollen rags—An exporter of woolen rags in Paris, wishes to be put in touch with Canadian buyers.

944. Agent—A French metallic cable factory is open to appoint Canadian agent.

949. Engineering—A London agent possessing a knowledge of the engineering business, and who has resided for some time in Canada is seeking the representation in England of Canadian firms requiring such services as he can offer.

950. Chemicals—A London firm in a position to handle large quantities of chemicals is desirous of hearing from any Canadian house who may be able to export iodine, etc.

951 Representative—A firm of wholesale and export saddlers in London is desirous of appointing suitable representatives in the leading Canadian business centres.

954. Varnishes, paints, etc.—A London manufacturer of varnishes, paints and colors would like to get into touch with Canadian importers.

Western Canada Factory, 797 Notre Dame Ave., Winnipeg, Man.

USEFUL INFORMATION.

To ascertain the area of a circle, multiply the square of its diameter by .7854.

To ascertain the circumference of a circle, multiply its diameter by 3.1416.

Water, gas and steam pipes are measured on the inside; boiler tubes on the outside.

Generally speaking, one cubic inch of water evaporated at atmospheric pressure makes one cubic foot of steam.

A heat unit known as a "British thermal unit," or B.T.U., raises the temperature of one pound of water to one degree.

A pound of anthracite coal contains 14,500 heat units.

For low pressure heating purposes, from 4 to 8 lbs. of coal per hour is considered economical consumption, for each square foot of grate surface in a boiler, dependent upon conditions.

A horse-power is estimated equal to 75 to 100 square feet of direct radiation. A horse-power is also estimated as 15 square feet of direct radiation. A horse-power is also estimated as 15 square feet of heating surface in a standard tubular boiler.

CLUFF CO'S RAPID GROWTH.

This week R. J. Cluff & Co., Lombard street, Toronto, change their name to that of Cluff Bros., Robert J. Cluff being joined in the enterprise by his brother Wm. J. Cluff, who has been associated with him in the enterprise since it was established a little over a year ago.

When the company was first organized, they were appointed selling agents for Ontario for the products of the factories of Warden, King & Co., Montreal, manufacturers of the famous Daisy Boiler. Small premises were secured on Lombard street, but within a few months the business outgrew the space available, and a large site was procured adjoining the rear of the post office building, and a fine office and warehouse building was erected, the new building being occupied about a month ago.

Huge bins have been erected for storing fittings of every size and description, the company intending to carry the largest and most complete stock of steam fitting supplies of any firm in Canada. Every known fitting between 1-8 inch and 12 inches in size will be carried in stock, and every effort made to win a reputation for carrying everything in the heating line.

A monster sign 30 by 80 feet has been painted on the side of the building over the post office square, this giving Cluff Bros. an opportunity to do some good advertising in bringing their warehouse to the attention of passers by.

FOUNDRY AND METAL INDUSTRIES

A steel bridge to cost $60,000 is to be erected for the St. John River at Hawkshaw, N.B.

A large deposit of rich iron ore has been discovered south of Verner in the Nipissing district by W. A. Cockburn, Sturgeon Falls. The ore is present in great surface quantity and in a locality convenient to the railway.

The first open hearth furnace and first blooming mill and combined rod and merchant mill in the vicinity of Montreal will shortly be erected in connection with the Dominion Wire Manufacturing Co. and will cost about half a million dollars.

A new stove foundry is to be established at Dorchester, N.B., under the management of Wm. Dowd and H. R. Ficks, formerly of Moncton, but more recently of the United States. The site has been procured and three foundry buildings are now being erected.

The American Iron & Steel Association has received from the miners' committee complete statistics of the production of pig iron in the United States and Canada in the first half of 1906. The production in the United States was 12,602,901 gross tons, against 11,829,205 tons in the last half of 1905, and 11,163,175 tons in the first half of 1905. The production in the first half of 1906 was the largest in any half year in the history of the trade, and larger than that of any whole year prior to 1899. It now is reasonably certain that the production of pig iron in 1906 will exceed 25,000,000 tons. The production in Canada amounted to 282,010 tons, against 257,797 tons in the last half of 1905, and 210,206 tons in the first half of that year. The production in the first six months of 1906 was the greatest in any half-year in the history of the Dominion. It was also greater than the production of any whole year prior to 1902.

July of 1906 will pass in history as presenting a most unusual situation in the pig iron and crude steel supply, says the New York Commercial. In other years this has always been the month of plenty. Finishing mills have been shutting down during the hot months for repairs and the supply of crude material and pig iron has kept on, as the blast furnaces have continued in operation as before. Blast furnaces do not find it so necessary to ease up during the sweltering July days, as do the mills where the workers are more directly affected by the heat. This year, however, conditions are the exact opposite. Finishing mills are running to their full capacity. Furnace stock has been so depleted that a marked scarcity in the market supply is noticed. Pig iron is much shorter at the close of the month than at the beginning and the same is true of billets and sheet bars. The demand on the finishing mills has been so great as to render stoppage for the annual repairs, inventory, etc., impracticable. The scarcity of pig iron and crude steel is likely to become much more marked in August than it was in July. Owing to a shut down of some of the furnaces for relining, the output has been slightly reduced and the demand is fully up to the capacity of the furnaces. Many furnaces, badly in need of repairs, are being kept in blast until the last moment, in order to ease up the scarcity.

GROWTH OF IRON.

William Marriott, an English civil engineer, writing to the London Times concerning an article about the "growth of iron," says:

I have never seen this in print before, nor have I heard the term used, but during an experience of over thirty years I have felt sure that such has been the case. Rails that have fitted swing bridges with plenty of clearance have had to be shortened repeatedly year after year, and only recently I have known an instance of a swing bridge which had been open for half an hour that could not be put back until some of the ironwork had been reduced. The bridge had been built for some thirteen years, and had been opened and closed during that time many hundreds of times. There is little doubt in my mind that iron heated and cooled alternately does permanently lengthen.

Come, "Brighten Up" in the Fall Time

The dealer who handles *any* line of paints and varnishes is not very likely to have a big trade this Fall. But the dealer who has ***The S-W. Line*** is making preparations for a record business.

The reason is simple—

We have worked up a Fall Campaign for our agents that *gets results*. "Brighten Up" is the slogan, and it has spread from one end of the country to the other. Our strong advertising helps are creating the demand and our agents are profiting. ***S-W. Products*** are not lingering on the shelves, for we are pushing for the dealers success just as much as our own. And the *quality* of our paints and varnishes stands behind this advertising. With ***The S-W. Line*** the agent knows that he has goods that will give perfect satisfaction; that will sell and stay sold and that will make new sales. Our Fall "Brighten Up" Campaign is worth a great deal to any dealer who wants to brighten up his bank account —and we would be pleased to introduce you to the merits of our products. We know that it would be to your advantage for us to get together. Write us today and secure the benefits of what we are doing for our agents. We can help you do a top-notcher business this Fall, if you will join The S-W. family.

A QUESTION FOR STEAMFITTERS

Elsewhere in this issue an offer is made of an honorary prize of $5.00 for the best answer received to the question repeated below, as well as a year's subscription to Hardware and Metal to any reader of the paper who sends in an answer considered worthy of publication. The question is as follows:

> "If you were installing a hot water heating plant having 500 sq. ft. of radiation, and a boiler rated to handle the same amount, and you were asked by your customer if there would be any advantage in installing a larger sized boiler, either in the interest of better service or economy in the consumption of fuel, and if so, why?—What would you say?"

It is our intention to publish a series of such questions if the plumbers and fitters throughout Canada indicate their desire to have an expression of views on controversial trade subjects or matters of educational interest similar to the query made above.

Each reader of these lines should endeavor to answer the question propounded, in order that he may be able to answer a customer promptly and satisfactorily if the point arises at any time. And having reached a conclusion, the reader should jot down his ideas upon a sheet of paper and forward to us at once. The reader's argument may be wrong and some other fellow's may be right, but by a comparison of ideas the proper solution to the problem can be arrived at. Let us have a goodly number of replies to the question?

HARDWARE AND METAL

10 FRONT ST. EAST, TORONTO.

The Name LABATT

PLUMBERS' SUPPLIES

Our goods cost more to manufacture and are the most reliable. Our valves contain over 80 per cent. pure copper and are packed and tested under a pressure from 125 to 200 pounds.

Our London Low-down Closets are recognized as standard, and are made complete in our works, all the lumber used is selected and dry kilned by us, in short, they are honestly made.

If after purchasing and examining one of our closets you do not find it superior to any other on the market it can be returned at our expense.

As red brass goods can easily be made of yellow brass, you cannot be too careful in the selection of your valves. Engine builders are buying ours and they have satisfactorily stood the test of time. In competitive tests they always win.

We manufacture our own soil pipe and can ship in carload lots same day as order is received. Our stock of enameled ware, brass goods and closets is also very large, we carry approximately 10 car loads of soil pipe and closets in stock.

MACHINERY

Our gas engines are equalled by none. During the past three years approximately 1,000 gas engines have been sold without ever having one returned, notwithstanding the fact that we sold practically all of them with the distinct understanding that if engine did not prove entirely satisfactory it could be returned at our expense.

Our gasoline engines have not those troublesome parts found in other gasoline engines, the Reliance runs smooth and steady.

Our stationary steam engines, manufactured from 10 h.p. up, have given perfect satisfaction for 15 years.

For 30 years we have been manufacturing hydrants and valves. We have our own Brass and Iron Foundries.

JOHN MILLEN & SON'S NEW PREMISES.

Recently Hardware and Metal had the opportunity of looking over the new premises of John Millen & Son, Montreal.

This firm has made remarkable progress. Established by John Millen nearly forty years ago in premises on the corner of Plessis and St. Catherine streets, Montreal, they continued to occupy the same building until a few months ago when they disposed of their property and moved to the hub of the mechanical business district, St. James street, where at No. 321 they have a showroom which is as handsomely fitted out as any on the street. The accompanying half tone illustration shows some of the features of the new premises, which are about 150 feet deep with a shipping entrance on Craig street. The large warehouse in the rear of the showroom is well filled with bicycle, automobile and gas engine supplies of all kinds and is a model of neatness and order. The firm evidently does a large trade also in the Shelby seamless steel tubing, judging by the well-filled racks of that material on hand.

A WORD TO PLUMBERS

Our Pipe Die reduces the labor in threading pipes at least one half. Try it, it will cost you nothing to try it. We secure you against possible loss by our offer to return your money on return of the die within thirty days, if it is not satisfactory. It is surely worth a trial on these conditions.

PAINT, OIL AND BRUSH TRADES

HOUSE PAINTS.

In house paints we must have both pigment and liquid and they must be so prepared and proportioned as to give not only the desired shades but also to work properly under the brush, cover the greatest amount of surface consistent with proper protection, hide the under surface so thoroughly as to present a pleasing surface to the eye, dry properly, show great durability and in the end leave a good surface for repainting; not only this but the composition must be such as will keep for a considerable period of time in good condition, writes A. H. Hooker. When in sealed package, must hold well in suspension and be easily stirred up to a uniform consistency after long standing.

In mixed paints of the best class, the liquid is chiefly linseed oil. This in a well equipped factory is not received haphazard, as the fancy or seed on hand of the crusher may dictate, but each lot as it is received in bulk must pass the most rigid inspection of a well equipped laboratory; this results in the crusher supplying to the critical manufacturer only pure linseed oil well settled and of the fullest body, from carefully selected seed. Any oil of inferior quality from impure seed will naturally find a less critical market, presumably the painter or small dealer. This of itself is an insurance of the highest quality of linseed oil entering into such mixed paints.

The next consideration is the Japan drier to be used; this must be chosen with the greatest care and used in exactly the right proportions to insure the best results. It must accomplish two purposes in the paint, increase the gloss and toughness or firmness of the paint without detracting from its elasticity, and it must dry the paint properly without overdoing the matter as is frequently the case where the painter burns the very life out of a paint by mixing rather indefinite quantities of an unknown and probably cheap Japan into his hand-mixed paint. In the factory laboratory, the exact quality and drying strength of each lot of Japan is carefully tested and these tests are extremely interesting, as they take note of the amount of oxygen absorbed from the air by a paint film during the drying, so that the exact time not only when a paint film is dry to touch, but dry throughout, is noted; these weighings are made hourly after a certain period, using a balance or scales sensitive to one 50-thousandth of an ounce. With this data the mixed paint department can regulate to a nicety the amount of each drier to be used. Another feature to be considered is that not all driers will work with all pigments, but care must be exercised that there shall be no clash between the pigment and drier.

We sometimes find painters using a Japan which will work admirably with zinc, but which livers badly with lead or the reverse. No chances of this kind can be taken with factory products running into the thousands of gallons. Everything must be tested with the greatest care; not only in the liquids, but the pigments as well—color, strength, fineness, opacity, and the delicate chemical reactions necessary to detect such impurities as acid in the white lead or iron oxides and sulphur compounds in the zinc—impurities quite impossible of detection outside of the laboratory but of vital importance to the durability and working quality of the finished paint. In the factory the material as received must pass all of these tests before it passes to the manufacturing department.

In the choice of pigments and coloring matter for a mixed paint of the highest class, at least three white bases must be considered if we are to obtain the best results: Outside white, inside white, white for colors or tints.

The characteristics of these bases differ materially for the following reasons: Outside white should embody in a marked degree opacity with durability, purity of color and certain filling qualities and leave a surface capable of being repainted. This at its best implies a combination of nearly equal parts of zinc and lead with the minimum of inert material or filler, about 10 per cent., necessary to shorten the spreading of the zinc and keep the paint in proper condition in the can and in the end insure a good surface for repainting. The zinc and lead in this proportion properly balance each other to overcome the hardness of the zinc and the chalking of the lead and at the same time the zinc adds greatly to the durability and permanent whiteness of the color.

For an inside white where a semi-gloss or eggshell finish is desired, a large proportion of a volatile solvent like turpentine is essential. This makes it possible to use a larger proportion of zinc white which for interior use is a most decided advantage, as it gives a much whiter surface to start with and lessens in a marked degree the tendency of white lead and linseed oil to turn yellow when used for inside painting. Here also the amount of inert material can with advantage be reduced to the smallest amount compatible with the proper working of the paint, as we desire an opaque white. It is not safe to reduce this below 10 per cent.; otherwise there is a tendency of the zinc to spread too far, not giving sufficient thickness to the coat of paint. This would mean an extra coat of paint to properly cover or hide the surface, and thus increase the expense of painting.

For a white base to be used with tints another point must be taken into con-
